14. ABSTRACT
The research focuses on cyber-attacks on cyber-physical systems of the unmanned vehicles that are characteristically used in the military, particularly the Air Force. Unmanned systems are exposed to various risks as the capacity of cyber attackers continue to expand, raising the need for speedy and immediate responses. The advances in military technologies form the basis of the research that explores the challenges faced in the timely detection and response to cyber-attacks. The purpose of the research is to study the connections between operator suspicion and the detection and response to cyber-attacks alongside the identification of theory of suspicion as the theoretical framework.
