A. Mission Description and Budget Item Justification

This program investigates, develops, and analyzes aerospace vehicle technologies in the three primary areas of structures, controls, and aerodynamics for legacy and future aerospace vehicles. Advanced structures concepts are explored and developed to exploit new materials, fabrication processes, and design techniques. Vehicle, inter-vehicle, and intra-vehicle control technologies are developed and simulated for aerospace vehicles. Advanced aerodynamic vehicle configurations are developed and analyzed through simulations, experiments, and multi-disciplinary analyses. Resulting technologies improve performance of existing and future manned and remotely piloted air vehicles, sustained high speed, and space access vehicles. Improvements include, but are not limited to, reduced energy use by efficient air platform designs, use of lightweight composite structures, and improved sustainment methods based on the condition of the platform and sub-systems. Efforts in this program have been coordinated through the Department of Defense (DoD) Science and Technology (S&T) Executive Committee process to harmonize efforts and eliminate duplication.

This program is in Budget Activity 2, Applied Research, because this budget activity includes studies, investigations, and non-system specific technology efforts directed toward general military needs with a view toward developing and evaluating the feasibility and practicality of proposed solutions and determining their parameters.

A. Mission Description and Budget Item Justification												
This project develops advanced structures concepts to exploit new materials and fabrication processes and investigates new concepts and design techniques. New structural concepts include incorporating subsystem hardware items and adaptive mechanisms into the aerospace structures and/or skin of the platform.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2015	FY 2016	FY 2017	
Title: Aircraft Service Life Technologies									23.772	23.652	21.431	
Description: Develop an economic service life analysis capability comprised of analysis tools, methodologies, and structural health monitoring technologies.												
FY 2015 Accomplishments: Completed technology development concepts for risk informed decision-making. Completed technology efforts for condition-based maintenance of structural integrity. Initiated development of engineered residual stress methods for airframe life extension. Continued the technology development of failure criteria methods and tools for advanced aircraft composite and metallic components. Continued efforts in certification of advanced composite for aircraft structures. Continued efforts in Airframe Digital Twin to develop an integrated system of data, models, and analysis tools that enable better decisions regarding fleet lifecycle management and sustainment.												
FY 2016 Plans: Continue development of engineered residual stress methods for airframe life extension. Continue the technology development of failure criteria methods and tools for advanced aircraft composite and metallic components. Continue efforts in certification of advanced composite for aircraft structures. Continue efforts in Airframe Digital Twin to develop an integrated system of data, models, and analysis tools that enable better decisions regarding fleet lifecycle management and sustainment.												
FY 2017 Plans: Continue development of engineered residual stress methods for airframe life extension. Continue efforts in certification of advanced composite for aircraft structures. Complete the technology development of failure criteria methods and tools for advanced aircraft composite and metallic components. Continue efforts in Airframe Digital Twin to develop an integrated system of data, models, and analysis tools that enable better decisions regarding fleet lifecycle management and sustainment.												
Title: Vehicle Design Technologies									3.486	15.665	12.047	
Description: Develop methodologies to reduce the cost and time involved from design to full-scale testing of structural concepts and aircraft systems.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2015	FY 2016	FY 2017
FY 2015 Accomplishments: Completed high fidelity multidisciplinary design methods to enable efficient supersonic air vehicle technologies. Completed development of multi-disciplinary methodologies that will allow for lower cost advanced structures. Continued the development of advanced high fidelity aircraft design analysis tools. Initiated design methods for innovative control of supersonic tailless aircraft. Initiated parametric modeling methods for integrated multidiscipline collaborative design. FY 2016 Plans: Continue the development of advanced high fidelity aircraft design analysis tools. Continue design methods for innovative control of supersonic tailless aircraft. Continue parametric modeling methods for integrated multidiscipline collaborative design. Continue high-fidelity technology assessment and design of next generation mobility concepts. Initiate the development of design methods for low cost attritable aircraft concepts. FY 2017 Plans: Continue the development of advanced high fidelity aircraft design analysis tools. Complete design methods for innovative control of supersonic tailless aircraft. Continue parametric modeling methods for integrated multidiscipline collaborative design. Complete high-fidelity technology assessment and design of next generation mobility concepts. Continue the development of design methods for low cost attritable aircraft concepts. Initiate evaluation of control effector concepts for supersonic tailless aircraft.					
Title: Structural Concepts Description: Develop design methods, processes, and lightweight, adaptive, and multifunctional structural concepts to capitalize on new materials, multi-role considerations, and technology integration into aircraft systems. FY 2015 Accomplishments: Continued innovative energy efficient conformal load bearing antenna structural concepts. Initiated development of lightweight, adaptive, and efficient structural concepts for mobility and special operations. Initiated low cost airframe design and manufacturing methods. FY 2016 Plans: Continue innovative energy efficient conformal load bearing antenna structural concepts. Continue development of lightweight, adaptive, and efficient structural concepts for mobility and special operations. Continue low cost airframe design and manufacturing methods. FY 2017 Plans: Continue innovative energy efficient conformal load bearing antenna structural concepts. Continue development of lightweight, adaptive, and efficient structural concepts for mobility and special operations. Complete low cost airframe design and			3.972	12.795	7.625

A. Mission Description and Budget Item Justification												
This project develops technologies that enable maximum affordable capability from manned, remotely piloted and autonomous aerospace vehicles. Advanced flight control technologies are developed for maximum vehicle performance throughout the flight envelope and simulated in virtual environments. Resulting technologies contribute significantly towards the development of reliable autonomous remotely piloted air vehicles, hypersonic aircraft, and extended-life legacy aircraft.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2015	FY 2016	FY 2017	
Title: Advanced Flight Controls Technologies									10.414	11.438	12.307	
Description: Develop technologies for advanced control-enabled capabilities, including flight controls, components, integrated vehicle management systems and software, and system certification techniques for both manned and remotely piloted aircraft.												
FY 2015 Accomplishments: Continued the development, demonstration, and assessment of advanced flight control mechanization technologies for trusted and certifiable operations under adverse and contested environments. Continued the development of survivable and health-adaptive control system architecture; developing new methods and expanding to include more aircraft systems. Completed assessment of single pilot operations for mobility aircraft. Continue the development of adaptive guidance and control technologies for small-scale hypersonic air vehicles.												
FY 2016 Plans: Continue the development, demonstration, and assessment of advanced flight control mechanization technologies for trusted and certifiable operations under adverse and contested environments. Continue the development of survivable and health-adaptive control system architecture; developing new methods and expanding to include more aircraft systems. Initiate development of advanced automation capabilities for large aircraft. Complete the development of adaptive guidance and control technologies for small-scale hypersonic air vehicles.												
FY 2017 Plans: Continue the development, demonstration, and assessment of advanced flight control mechanization technologies for trusted and certifiable operations under adverse and contested environments. Continue the development of survivable and health-adaptive control system architecture; developing new methods and expanding to include more aircraft systems. Continue the development of advanced automation capabilities for large aircraft.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2015	FY 2016
Description: Develop technology for flight control systems that will permit safe interoperability between manned and remotely piloted aircraft and effective teaming in adverse and contested environments. FY 2015 Accomplishments: Continued the development, demonstration, and assessment of advanced control automation techniques. Continued the development of mixed initiative control techniques for teams of remotely piloted aircraft and/or manned-unmanned teams in contested, dynamic mission environments, as well as for the integration of unmanned systems into controlled airspace and airbase operations. Completed demonstration and assessment of on-aircraft technology options for autonomous operations in a terminal airspace environment. Continue development of airborne control of UAS in preparation for flight test activities. FY 2016 Plans: Continue development, demonstration, and assessment of advanced control automation techniques. Continue the development of mixed initiative control techniques for teams of remotely piloted aircraft and/or manned-unmanned teams in contested, dynamic mission environments, as well as for the integration of unmanned systems into controlled airspace and airbase operations. Initiate development of robust, affordable Unmanned Air Systems (UAS) operations in a terminal airspace environment. Complete development of airborne control of UAS in preparation for flight test activities. FY 2017 Plans: Continue development, demonstration, and assessment of advanced control automation techniques. Continue the development of mixed initiative control techniques for teams of remotely piloted aircraft and/or manned-unmanned teams in contested, dynamic mission environments, as well as for the integration of unmanned systems into controlled airspace and airbase operations. Continue the development of robust, affordable UAS operations in a terminal airspace environment.			
Title: Flight Controls Technologies Modeling and Simulation Description: Develop tools and methods for capitalizing on simulation-based research and development of future aerospace vehicles. FY 2015 Accomplishments: Continued modeling and simulation efforts to evaluate emerging autonomous and robust flight control technologies and concepts, as well as assess mission-level performance of integrated aerospace systems. Continued analyses of automated unmanned air systems and manned-unmanned teams in controlled airspace and airbase operations, as well as in adversarial mission environments, initiating development of testbed for emerging technologies. Continued trade studies of vehicle concepts for strike, mobility and reconnaissance. Completed autonomy in mobility testbed and began mobility evaluations. FY 2016 Plans:		5.123	4.703

Title: High Speed/Hypersonics Structures									8.115	8.315	10.896	
Description: Develop high speed, high temperature structural analysis methods and technologies for extreme operating conditions in current and future air vehicles.												
FY 2015 Accomplishments: Initiated development of innovative structural concepts for high speed/hypersonic air vehicles. Initiated development of analytical methods for predicting structural response needed for design and evaluation of hot primary structure for hypersonic vehicles. Initiate the impact of path dependent structural behavior on the service life prediction for hot structures encountering extreme environments. Initiated the development and integrate model uncertainty methods into multi-disciplinary simulations and quantify its impact on the structural margin. Initiated development of structural analysis methods and technology for hot structure concepts under extreme environment loading conditions. Initiated the assessment of the aerospace community to quantify the structural margins for extreme environment hot structure through experimental validation of ground test articles. Completed fabrication and initiated testing of representative vehicle structures for combined aero, thermal, and acoustic loads.												
FY 2016 Plans: Continue development of innovative structural concepts for high speed/hypersonic air vehicles. Continue development of analytical methods for predicting structural response needed for design and evaluation of hot primary structure for hypersonic vehicles. Continue to assess the impact of path dependent structural behavior on the service life prediction for hot structures encountering extreme environments. Continue to develop and integrate model uncertainty methods into multi-disciplinary simulations and quantify its impact on the structural margin. Title: High Speed Vehicle Aeromechanics and Integration		7.323	6.542	7.846
Description: Develop new and improved components, concepts, and designs for sustained flight of high-speed/hypersonic expendable and re-useable vehicles. Conduct analyses of high speed/hypersonic vehicles to enable revolutionary capabilities.				
FY 2015 Accomplishments: Matured critical technologies for high speed/hypersonic flight. Initiated development of design/analysis techniques/tools and experimental approaches to enable enhanced high-speed air induction system starting, operability, and performance for propulsion integration concepts over a wide range of flight conditions. Continued performance and operability ground testing of advanced high contraction ratio inlets. Initiated development of high speed system concepts that provide revolutionary capabilities. Investigated aeromechanic technologies to reduce drag and enable robust stability & control at low dynamic pressure flight conditions. Initiated efforts to characterize high-speed phenomena and develop and validate fundamental high-speed technologies through experimental testing. As part of international collaborative effort, conducted flight tests boundary layer transition experiment. Developed design of multi-functional terminal sensor integrated flight experiment. Assessed mission-level effectiveness and refined definition of preferred high speed weapon alternatives. Developed campaign-level modeling and simulation of high speed weapon alternatives. Assessed campaign-level benefits of preferred high speed weapon alternatives				
FY 2016 Plans: Continue maturation of critical technologies for high speed/hypersonic flight. Continue development of design/analysis techniques/tools and experimental approaches to enable enhanced high-speed air induction system starting, operability, and performance for propulsion integration concepts over a wide range of flight conditions. As part of an international collaborative effort, continue flight tests of Mach 6 adaptive guidance and control flight experiment. Continue assessment of mission-level effectiveness and refinement of definition of preferred high speed weapon alternatives and limited life hypersonic intelligence, surveillance, and reconnaissance vehicles. Continue assessment of campaign-level benefits of preferred high speed weapon alternatives. <i>FY 2017 Plans:</i> Continue to mature critical technologies for high speed/hypersonic flight. Continue development of design/analysis techniques/tools and experimental approaches to enable enhanced high-speed air induction system starting, operability, and performance for propulsion integration concepts over a wide range of flight conditions. Continue development of high speed system concepts that provide revolutionary capabilities. Continue investigation of aeromechanic technologies to reduced drag and enable robust stability and control at low dynamic pressure flight conditions. Continue efforts to characterize high-speed phenomena and develop and validate fundamental high-speed technologies through experimental testing. As part of international collaborative effort, complete flight testing of Mach 6 adaptive guidance and control flight experiment and initiate boundary layer transition flight experiment program. Continue assessment of mission-level effectiveness and refinement of definition of preferred high speed weapon alternatives and limited life hypersonic intelligence, surveillance, and reconnaissance vehicles. Continue assessment of campaign-level benefits of preferred high speed weapon alternatives.			
Accomplishments/Planned Programs Subtotals		15.438	14.857
C. Other Program Funding Summary (\$ in Millions)			
N/A			
Remarks			
N/A			
D. Acquisition Strategy			
Not Applicable.			
E. Performance Metrics			
Please refer to the Performance Base Budget Overview Book for information on how Air Force resources are applied and how those resources are contributing to Air Force performance goals and most importantly, how they contribute to our mission.
