## **A. Mission Description and Budget Item Justification**

This program develops and demonstrates technologies to support Air Force electronic combat warfighting capabilities. The program focuses on developing components, subsystems, and technologies with potential aerospace combat, special operations, and airlift electronic combat applications in four project areas. The first project develops and demonstrates technologies for integrating electronic combat sensors and systems into a fused and seamless whole. The second project integrates and focuses research efforts in electronic warfare (EW), directed energy weapons (DEW), and cyber warfare to rapidly demonstrate a capability for rapid fielding. The third project develops and demonstrates advanced technologies for radio-frequency electronic combat suites. The fourth project develops and demonstrates advanced warning and countermeasure technologies to defeat electro-optical, infrared, and laser threats to aerospace platforms. This program has been coordinated through the Department of Defense (DoD) Science and Technology (S&T) Executive Committee process to harmonize efforts and eliminate duplication.

This program is in Budget Activity 3, Advanced Technology Development because this budget activity includes development of subsystems and components and efforts to integrate subsystems and components into system prototypes for field experiments and/or tests in a simulated environment.

Mission Description and Budget Item Justification                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |             |         |         |              |                                                                                        |               |         |         |                                                                         |                     |                  |            |
| This project establishes a capability to rapidly assess, develop and demonstrate new electronic warfare concepts, techniques, and capabilities in the context of systemic electronic warfare (EW) effects (EW-threat interactions) in a congested/contested electromagnetic spectrum (EMS), system-of-systems (SoS) environment of the future. It develops disruptive EW and countermeasures concepts specifically selected for high-impact, game-changing effects; evaluates them in high fidelity virtual and hardware evaluation settings; and demonstrates them in an operationally relevant environment. It establishes and maintains an all-source, physics-based, threat-to-countermeasures EW systems engineering methodology. It develops a core analytic function, supported by simulation-based wargaming and interactive engineering modeling capabilities to evaluate advanced countermeasures concepts. |             |         |         |              |                                                                                        |               |         |         |                                                                         |                     |                  |            |

| Title: Disruptive Electronic Warfare (EW) and Countermeasure Technologies                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |             |         |         |              |                                                                                        |               |         |         |                                                                         | 3.794               | 13.493           | 12.121     |
| Description: Develop disruptive EW and countermeasure concepts specifically selected for rapidly fieldable, high-impact effects and demonstrate them in an operational environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |         |         |              |                                                                                        |               |         |         |                                                                         |                     |                  |            |
| FY 2014 Accomplishments:<br>Developed disruptive EW and countermeasures concepts and technologies specifically selected for high impact effects and demonstrated them in simulated or operational environments. Expanded these SoS developments to include GPS-denied techniques and technology solutions, networked-systems electronic protection (EP), and effects experimentation between/across EMS, cyber and directed energy (DE) domains.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |             |         |         |              |                                                                                        |               |         |         |                                                                         |                     |                  |            |
| FY 2015 Plans:<br>Focus research on investigating the use of directed energy and cyber effects for EW use against Radio Frequency (RF) threats. Determine trade space and conduct experiments of these disruptive technologies against integrated air defense systems and other RF threats. Explore multi-spectral approaches to defense against these threat systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |             |         |         |              |                                                                                        |               |         |         |                                                                         |                     |                  |            |
| FY 2016 Plans:<br>Leverage developments in directed energy and cyber techniques to effectively simulate electronic attack against a modeled integrated air defense network to determine deficiencies in the attack capability. Focus research methods to mitigate the determined deficiencies in attack methodology and develop alternative strategies for employment to enable successful suppression of integrated air defense systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |             |         |         |              |                                                                                        |               |         |         |                                                                         |                     |                  |            |
| Title: Threat-to-Countermeasure System of Systems (SoS) Methods                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |         |         |              |                                                                                        |               |         |         |                                                                         | 5.800               | 7.020            | 7.032      |

| <p><b>Description:</b> Establish and maintain an all-source, physics-based, design-level, red-blue, comparative, threat-to-countermeasure SoS techniques methodology. This systems engineering-based electronic warfare (EW) approach will inform programmatic planning, quantify desirable research areas with realistic SoS metrics, and foster improved understanding of future concept contributions to EW warfighting capabilities.</p> <p><b>FY 2014 Accomplishments:</b><br/>Developed an all source, physics based, design level, red-blue, comparative, threat-to countermeasure SoS techniques methodology for use in concept development and simulation based testing. Initiated integration of SoS engineering methods across virtual/modeling, hardware-in-the-loop (HWIL) and systems integration lab (SIL) options to optimize end-to-end (threat-to-countermeasure) systemic effects.</p> <p><b>FY 2015 Plans:</b><br/>Improve in-house system of systems analysis capabilities in order to develop new techniques to address multi-spectral EW threats. Conduct initial systems engineering research on new technology initiatives in order to provide physics based, metric-driven projects that will address threats to countermeasure systems.</p> <p><b>FY 2016 Plans:</b><br/>Demonstrate improvements in Systems of Systems (SoS) analysis capability through virtual simulation mechanisms. Use metrics to show the value added proposition of multi-spectral techniques to address the threat to countermeasure system performance.</p> |                                                                                        |                                                                         |         |         |
| <p><b>Title:</b> Evaluation of Advanced Countermeasure Concepts</p> <p><b>Description:</b> Develop a core analytic function, supported by simulation-based wargaming and engineering modeling capabilities for evaluation, development, and demonstration of advanced electronic warfare (EW), cyber, directed energy (DE) and integrated/systemic, non-kinetic concepts to include special capability programs.</p> <p><b>FY 2014 Accomplishments:</b><br/>Developed a core analytical function, supported by simulation based war gaming and engineering modeling capabilities for evaluation, development, and demonstration of advanced countermeasure concepts to include special capability programs. Expanded evaluation capabilities to incorporate full systemic electromagnetic spectrum (EMS) effects and netted/distributed EW capabilities in anti-access/area denial (A2/AD) scenarios.</p> <p><b>FY 2015 Plans:</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                        | 7.600                                                                   | 8.155   | 8.018   |

| This project develops and demonstrates advanced technologies for radio-frequency electronic combat suites to enhance the survivability of aerospace vehicles and to provide crew situational awareness. One major area addresses technologies for missile/threat warning, radio-frequency receivers, electronic combat pre-processors, advanced sorting/pre-processing algorithms, and expert software for applications on existing and future electronic combat systems. Another major technology area focuses on the development and demonstration of subsystems and components for generating on-board/off-board radio-frequency countermeasure techniques. This includes the development of electronic countermeasures techniques, as well as advanced electronic countermeasures technologies such as antennas, power amplifiers, and preamplifiers. |             |         |         |              |                                                                                        |               |         |         |                                                                                |                     |                  |            |

| Title: Electronic Attack                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |             |         |         |              |                                                                                        |               |         |         |                                                                                | 20.692              | 14.484           | 15.800     |
| Description: Develop aerospace platform jamming technologies and techniques to counter advanced radio-frequency (RF) threats associated with current and future aerospace weapon systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |             |         |         |              |                                                                                        |               |         |         |                                                                                |                     |                  |            |
| FY 2014 Accomplishments:<br>Developed and demonstrated adaptable electronic attack (EA) technique concepts, cognitive jammer system concepts, and advanced EP concepts to defeat next generation RF threats with a major emphasis on penetrating contested, anti-access/area denial environments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |             |         |         |              |                                                                                        |               |         |         |                                                                                |                     |                  |            |
| FY 2015 Plans:<br>Develop and conduct laboratory simulation experiments of adaptable EA technique concepts. Develop software prototype algorithms for cognitive jammer system concepts as well as protection of avionics systems to cyber-attacks. Continue to develop and demonstrate in laboratory environment advanced EP concepts to defeat next generation RF threats with a major emphasis on penetrating contested, anti-access/area denial scenarios.                                                                                                                                                                                                                                                                                                                                                                                             |             |         |         |              |                                                                                        |               |         |         |                                                                                |                     |                  |            |
| FY 2016 Plans:<br>Leverage advances in cognitive machine learning to autonomously employ adaptable EA techniques against modern adaptive programmable threats. Develop techniques to ascertain the efficacy of advanced EA methods employed against modern threats to close the loop allowing optimization of the EA technique.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |             |         |         |              |                                                                                        |               |         |         |                                                                                |                     |                  |            |

| This project develops and demonstrates the advanced warning and countermeasure technologies required to negate electro-optical (EO) / infrared (IR), and laser threats to aerospace platforms. Off-board (decoys and expendables) and on-board countermeasure technologies developed for aircraft self-protection will provide robust, affordable solutions for protection against infrared missiles with autonomous seekers, multi-spectral threats, laser-guided weapons, and EO/IR tracking systems used to direct EO/IR and radar-guided missiles. |             |         |         |              |                                                                                        |               |         |         |                                                                                   |                     |                  |            |

| Title: Advanced Electro-Optical (EO)/Infrared (IR) Warning and Countermeasure Technologies                                                                                                                                                                                                                                                                                                                                                                                                                                                             |             |         |         |              |                                                                                        |               |         |         | 4.630                                                                             | 4.356               | 4.061            |            |
| Description: Analyze the vulnerabilities of current infrared (IR) missile systems and future imaging IR sensors. Develop advanced countermeasure system technologies to exploit vulnerabilities for use against IR and electro-optical (EO) guided missile threats. Develop advanced optical and infrared sensor systems for airborne and space situational awareness and threat warning.                                                                                                                                                              |             |         |         |              |                                                                                        |               |         |         |                                                                                   |                     |                  |            |
| FY 2014 Accomplishments:<br>Developed, tested, and refined infrared countermeasures concepts with emphasis on penetrating contested, anti-access/area denial environments. Developed surrogate imaging sensors, processors, and track algorithms and performed advance proactive infrared countermeasure (PIRCM) search, detect, and countermeasure research. Developed concepts for protection of postulated future threats to 6th generation aircraft, including definition of component and subsystem requirements.                                 |             |         |         |              |                                                                                        |               |         |         |                                                                                   |                     |                  |            |
| FY 2015 Plans:<br>Develop advanced EO/IR concepts for protection from postulated future threats, including definition of component and subsystem requirements. Concepts will address contested, anti-access/area denial threats. Conduct laboratory experiments of surrogate multi-mode EO/IR sensors, processors, and track algorithms and continue to perform advanced proactive infrared countermeasure (PIRCM) search, detect, and countermeasure research.                                                                                        |             |         |         |              |                                                                                        |               |         |         |                                                                                   |                     |                  |            |
| FY 2016 Plans:<br>Continue the characterization and exploitation of advanced threat IR guided missiles and EO/IR Fire-control systems and sensors. Development of high fidelity surrogates, scene generation and modeling and simulation for testing and countermeasure development and verification/correlation to hardware in the loop results. Define the requirements for novel countermeasure                                                                                                                                                     |             |         |         |              |                                                                                        |               |         |         |                                                                                   |                     |                  |            |
