Note

In FY 2016, Project 642597 Non-cooperative Identification Subsystems includes new start efforts for Radio ID (RID).

A. Mission Description and Budget Item Justification

The Combat Identification (CID) Technology program element analyzes, develops, demonstrates and evaluates promising target identification technologies to facilitate platform transition decisions prior to Engineering and Manufacturing Development (EMD). The Joint Capability Document (JCD) for CID BFT (Blue Force Tracking), operational documents, lessons learned, and NATO requirements state the need for positive CID. High confidence CID increases combat effectiveness, prevents fratricide, and reduces collateral damage. It also enables combatant commanders to effectively command and control their forces in all weather, day or night. This program element focuses on the cooperative and non-cooperative technologies that have the capability to positively identify surface and air targets in both air-to-surface and air-to-air engagements.

In order to rapidly make available promising CID technologies for platform EMD decisions, the program element funds design studies, engineering analysis, and other efforts associated with demonstration of prototype CID related technologies and subsystems on platforms. It also supports the development, testing, and implementation of international standards (to include NATO standardization agreements) to ensure joint, Allied, and coalition interoperability.

Non-cooperative CID employs a number of sensing technologies and signal processing techniques. The observations may be compared to a database of known objects to identify surface or air threats from air platforms. These technologies include: (1) Laser Vision, an Electro-Optical/Infrared (EO/IR) imaging system that significantly increases ID ranges;(2) Radar Vision, an air-to-ground radar imaging technique to identify stationary and moving targets using their radar signatures; including passive techniques and electronic warfare identification technologies; (3) Hydra Vision, a balanced (robust) amalgamation of sensor data from multiple sources to provide warfighters with higher confidence CID results on surface or air targets potentially including fusion with intelligence sources, identification of non-traditional targets, fusion to counter camouflage, concealment and deception (CCD), and multi-phenomenology features for sustainable databases; (4) Compact ATR (Aided Target Recognition) and Sustainable Environments (CASE), a CID approach that focuses on tailoring algorithms to utilize smaller, more efficient databases that are faster and less expensive to generate and maintain; and (5) X-Patch, a validated set of prediction codes and analysis tools that predicts realistic far-field radar signatures from 3-D (3 dimensional) target models in order to predict 1D and/or 2D data. (6) A new program called Radio ID (RID) will develop methods for utilizing advances in radio technologies such as software defined radios to provide a low cost ID solutions for situational awareness and fratricide prevention potentially fusing non cooperative techniques and cooperative technologies.

Exhibit R-2, RDT&E Budget Item Justification: PB 2016 Air Force	Date: February 2015
--	----------------------------

Appropriation/Budget Activity 3600: <i>Research, Development, Test & Evaluation, Air Force I BA 4: Advanced Component Development & Prototypes (ACD&P)</i>	R-1 Program Element (Number/Name) PE 0603742F <i>I Combat Identification Technology</i>
--	---

Cooperative CID employs technologies required to rapidly identify friendly platforms. The program develops, integrates and evaluates technologies that provide AF platforms with a means of positively identifying an air or ground platform as a friendly, via active or passive cooperative ID capabilities. Development funded by this program element ensures availability of Automatic Dependent Surveillance - Broadcast (ADS-B) as well as Mode 5 IFF (Identification Friend or Foe) upgrade path for implementing ground and air platforms across the Air Force fleet. Activities also include studies and analysis to support both current program planning and execution and future program planning.

Fund Air Traffic Control Radar Beacon Systems Identification Friend or Foe Mark XIIA System (AIMS)Program Office test engineers. The DoD International AIMS PO has system level interoperability testing and certification responsibilities for the present Mark XII system, development and integration of Mark XIIA (Mode 5) and transition to Mark XIIA Mode S systems. AIMS PO will continue to test and certify IFF equipment for the services now as long as IFF is used for combat identification.

This program is in Budget Activity 4, Advanced Component Development and Prototypes (ACD&P) because efforts are necessary to evaluate integrated technologies, representative modes or prototype systems in a high fidelity and realistic operating environment.

The FY2016 funding request was reduced by \$2.981 million to account for the availability of prior execution balances.

Note

In FY 2016, Project 642597 Non-cooperative Identification Subsystems includes new start efforts for Radio ID (RID).

A. Mission Description and Budget Item Justification

Non-cooperative Combat Identification (CID) employs a number of sensing technologies and signal processing techniques. The observations may be compared to a database of known objects to identify surface or air threats from air platforms. These technologies include: (1) Laser Vision, an electro-optical/infrared (EO/IR) imaging system that significantly increases identification ranges and includes exploiting synergies between non-cooperative and cooperative ID systems (radio, millimeter wave, infrared, and laser); (2) Radar Vision, an air-to-ground radar imaging technique to identify stationary and moving targets using their radar signatures; including passive techniques and electronic warfare identification technologies; (3) Hydra Vision, a balanced (robust) amalgamation of sensor data from multiple sources to provide warfighters with higher confidence CID results on surface or air targets potentially including fusion with intelligence sources, identification of non-traditional targets, fusion to counter camouflage, concealment and deception (CCD), and multi-phenomenology features for sustainable databases; (4) Compact ATR (Aided Target Recognition) and Sustainable Environments (CASE), a CID approach that focuses on tailoring algorithms to utilize smaller, more efficient databases that are faster and less expensive to generate and maintain; and (5) X-Patch, a validated set of prediction codes and analysis tools that predicts realistic far-field radar signatures from 3-D (3 dimensional) target models in order to predict 1D and/or 2D data. X-Patch is vital for development of radar signatures of potential high-threat weapons systems; it is a critical capability of database production centers which support Joint Sensors Signature Database (JSSD) pathfinders.

Activities also include studies and analysis to support both current program planning and execution and future program planning.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Title: Laser Vision/3-D Ladar	-	0.800	1.800	-	1.800
Description: Laser Vision, a family of electro-optical (EO) systems that significantly increase ID ranges. Provides the demonstration and evaluation data necessary to support decisions on future EO technologies supporting CID. Includes 3-D (3 dimensional) imaging laser radar (Ladar) and exploration of advanced concepts. The 3-D ladar technology provides a display of an 3-D EO image to the pilot for high confidence combat identification and is a potential for the next generation targeting pods for the USAF.					
FY 2014 Accomplishments:

Exhibit R-2A, RDT&E Project Justification: PB 2016 Air Force			Date: February 2015				
Appropriation/Budget Activity 3600 / 4		R-1 Program Element (Number/Name) PE 0603742F / Combat Identification Technology	Project (Number/Name) 642597 / Non-cooperative Identification Subsystems				
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
N/A							
FY 2015 Plans: - The 3D video human perception research begins to quantify the enhancement to CID. - Discoveries can be used to optimize the display of 3D information on 2D video displays. - Using a spiral development approach, this work results in quantitative measure of improvement to CID and advanced 3D video modes for use in the flight demonstration. - A laboratory-class flight experiment can be initiated to provide early flight evaluation of the technology and provide critical data for other demonstration activities, such as flight measurement of real target signatures, benchmarking CIDS-3D, and supporting the development of advanced signal processing algorithms and display modes. - As in the FY 2014 AFRL test, the baseline is to use the DARPA program receiver. - The CIDS-3D performance modeling tool should be completed. - Components of this tool can be used to support the construction of the human perception research tool. - Results from the AFRL experiment and the laboratory-class flight tests can be used to benchmark CIDS-3D predictions. - A new procurement is initiated to begin integration of the 2D/3D receiver into the LITENING pod. - This work is expected to include mechanical, optical, electrical, firmware, and software modifications. - The integration activity can be followed by ground and flight evaluation of 3D sensing in the CID mission FY 2016 Base Plans: - 3DTO laboratory demonstration: (Cost: \$0.8M) this demonstration will provide a ground test of 3D ladar technology for targeting pods. - This FY16 demonstration will most likely be a short range tower demonstration prior to full up flight demonstration. - This will be a critical demonstration for a flight test of 3D ladar technology. - This technology not only has the potential for pilot/weaponer interpretation but the (Assisted Target Recognition) AiTR capability for 3D ladar information is mature and will provide a high confidence target ID into the cockpit. - The initial capability will be for high confidence ground target recognition but also has the potential for air target recognition.

- Pod integration of the 2D/3D receiver will continue. FY 2016 OCO Plans: N/A						
Title: Laser Vision/Siren Description: Description: Design, fabricate, and evaluate a tactical range laser vibrometry sensor in a targeting pod. Leverage ability of active electro-optic sensors to sense micro-displacements of operating machinery in order to measure the resulting frequency spectrum. Assess utility for air-to-ground combat identification. Begin research into advanced algorithms for processing data provided by vibrometry sensors in order to develop and demonstrate prototype pilot Aided Target Recognition software(VAMP). FY 2014 Accomplishments: - Material procurement was completed. - Fabrication of sensor active and passive electro-optical components has been initiated. - Modifications to targeting pod wiring harness have been completed. - Software development has been initiated and demonstrations of initial software components in operation were completed. - Testing of pod fiber raceway and compensation software approach assessment was completed. - Additional vibration contact measurement tests have been conducted and vibration feature selection algorithm research were continued for Aided Target Recognition (AiTR) software(VAMP). FY 2015 Plans: - Conduct subsystem verification experiments. - Conduct laboratory calibration and system tests. - Targeting pod system level tower testing at WPAFB tentatively scheduled for June 2015. - Test will utilize canonical and military targets. - Initiate flight test planning and add work. - Initiate SEEK EAGLE certification. - Continue AiTR development(VAMP). FY 2016 Base Plans: - This demonstration will demonstrate the vibrometry sensing technology for targeting Pod demonstration.		3.616	2.664	4.355	-	4.355

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
- This technology will provide a valuable target recognition capability for ground targets determining engine type, with potential to counter enemy Camouflage, Concealment and Deception (CC&D) techniques as well as a valuable battle damage assessment tool. - This capability will provide a critical complement to image based ID tools and has the potential for air target ID as well as ground target ID. - This demonstration will provide the necessary funds to have AATC demonstrations with modified LITENING Pod flying on a test F-16 (Cost: \$3.5M). FY 2016 OCO Plans: N/A						
Title: Hydra Vision Description: Hydra Vision (Multi-Sensor Enhanced ID) is a family of balanced (robust) amalgamation of sensor data from multiple sources to provide warfighters with higher confidence CID results on surface or air targets. FY 2014 Accomplishments: - Air to Air: The air to air hydravision effort pushed the state of the art for air target ID in both more sustainable target insertion and dramatically increased database size. - Air to Ground: Conducted a real-time flight test and an assessment of system and ATR performance evaluation. - Initiated ATR and system updates to enhance robustness. FY 2015 Plans: - Air to Air: Continue to refine fusion algorithms to maximize performance. - Demonstrate 2 feature fusion with ground based radar and investigate additional feature fusion for higher confidence ID performance. - Air to Ground: Complete ATR/system updates and transition away from surrogate sensors. - Plan and execute an engineering flight test and evaluate the ATR results. FY 2016 Base Plans: - Air to Air: Will perform a real time flight demonstration of a two feature air target Identification. - This demonstration will implement next generation air target identification for 5th generation fighter radar and upgraded 4th generation fighter radars.		3.533	2.715	6.700	-	6.700

- These demos will be done on fighter aircraft radars on one of the prime radar developers (Raytheon or Northrup Grumman) surrogate platforms (Cost: \$3.1M). - Air to Ground: Will participate in a suitable operational demonstration such as Bold Quest to demonstrate Assisted Target Recognition (AiTR) for a MQ-9 (Reaper). - This critical capability will provide an operator the ability to quickly identify multiple targets of interests (automatically) or to focus an analyst to the most important targets. - This will benefit both ACC and AFSOC MQ-9's assuring more effective close in ID capabilities (Cost: \$2.5M). FY 2016 OCO Plans: N/A							
Title: Compact ATR and Sustainable Environment (CASE) Description: CASE is a family of efforts to address efficiency and sustainability issues associated with the development, operation and maintenance of non-cooperative ATR technology. Develop sustainable multi-phenomenology ATR based on low fidelity, compact, and inexpensive database technology. FY 2014 Accomplishments: - Started initial design with an analysis of a breadth of technologies to determine the most promising overall system to provide compact data with continued identification performance. - Downselected to two contractors from five proposed contractor designs. - This technology promises a more sustainable technology for long term combat ID systems. FY 2015 Plans: - Continue technology development in compact feature ATR initiated in Hydra Vision study. - Analyze feature extraction / uncertainty using low fidelity / physical feature target models. - Create compact feature ATR database and assess saliency and target discrimination utility. - FY15 will begin development towards a FY17 demonstration of the technology. FY 2016 Base Plans: - Testing of the system will begin utilizing cost and performance metrics. FY 2016 OCO Plans: N/A			0.994	1.925	3.475	-	3.475

A. Mission Description and Budget Item Justification

Cooperative Combat Identification (CID) employs technologies required to rapidly identify friendly platforms. The program develops, integrates and evaluates technologies that provide AF platforms with a means of positively identifying an air or ground platform as a friendly, via active or passive cooperative identification capabilities. Development funded by this project ensures availability of a Mode 5 upgrade path for implementing ground and air platforms across the Air Force fleet.

Within the air-to-air domain, programs funded to meet this intent include:

Mode 5 Technology Insertion Program (TIP): This project funds preliminary RDT&E for Mark XIIA, the next generation Identification Friend or Foe (IFF) standard for the DoD and NATO. Mark XIIA represents a substantial enhancement to the Mark XII IFF system. It is expected to achieve Joint Initial Operational Capability in 2014. The "A" denotes the addition of Mode 5 (an encrypted challenge-and-reply mode) to the other Mark XII system modes (Modes 1, 2, 3/A, C, S, and 4). The Mode 5 secure IFF program is a DoD-wide, Navy-led development and acquisition program. The Mode 5 TIP specifically addresses implementation for air platforms by integrating Mode 5 into APX-119, APX-114, APX-113 and the UPX-40 transponder systems.

Within the air-to-ground domain, development funded by this project ensures development, integration, test and evaluation of friendly identification systems focused on reducing air-to-ground fratricide. CID efforts include investigation of radio based identification technologies; including the exploitation of state of the art digital radios and software defined radios and integration of cooperative and non-cooperative technologies for improved target recognition which could be incorporated into targeting pods or directly into the cockpit.

Fund Air Traffic Control Radar Beacon Systems Identification Friend or Foe Mark XIIA System (AIMS) Program Office test engineers. The DoD International AIMS PO has system level interoperability testing and certification responsibilities for the present Mark XII system, development and integration of Mark XIIA (Mode 5) and transition to Mark XIIA Mode S systems. AIMS PO will continue to test and certify IFF equipment for the services now as long as IFF is used for combat identification.

B. Accomplishments/Planned Programs (\$ in Millions)
