**A. Mission Description and Budget Item Justification**

The National Security Innovation Network (NSIN) is a program office within the Office of the Under Secretary of Defense for Research and Engineering and authorized through Section 219 of the FY 2021 NDAA. NSIN reports through the Defense Innovation Unit (DIU) to the Undersecretary of Defense for Research and Engineering. NSIN has been chartered with a mission to build networks of innovators that generate new solutions to national security problems. NSIN develops programs that are designed to help other DoD entities from the Military Services, Joint Staff, Combatant Commands, and Defense Agencies and Field Activities solve problems with non-traditional partners from academia and the start-up community. NSIN is organized around three core lines of effort. These lines of effort include: 1) creating new opportunities for National Security Service by building models of service that account for generational and cultural differences between the military, academic, and venture communities and providing flexible pathways to official service within the Department of Defense; 2) solving national security problems by collaborating with partners from the academic and venture communities by engaging new problem-solvers in collision events with DoD customers that generate novel concepts and solutions and building a national network of problem-solving ecosystems that leverage the competitive advantages of regions and commercial innovation hubs for DoD customers; and 3) accelerating the adoption of novel concepts and solutions by facilitating engagement with DoD end users and transition partners to stimulate dual-use venture growth and improving Technology Transfer and Transition (T3) rates for DoD lab technology through dual-use commercialization via early stage ventures.

NSIN's physical network is composed of 11 Regional Directors, each of which is located in critical venture innovation hubs throughout the country (Boston, MA; New York City, NY; Washington, DC; Raleigh, NC; Chicago, IL; St. Louis, MO; Austin, TX; Denver, CO; Seattle, WA; San Diego, CA; and San Francisco, CA) and supported by University Program Directors (UPDs) that are embedded at critical universities throughout the country and are co-located with emerging or extant venture ecosystems. At objective stated, NSIN envisions approximately 35 such UPDs throughout the country and in all 50 states.

NSIN executes a suite of 12 programs (e.g., Hacking for Defense) and 7 pilot activities (see below) with annual costs of approximately \$40.000 million, inclusive of the personnel that support program planning, execution, and assessment.

NSIN has been a continuous Congressional interest program that has received funding in FY 2016 (\$5.000 million), FY 2017 (\$25.000 million), FY 2018 (\$25.500 million), FY 2019 (\$15.000 million), FY 2020 (\$40.000 million), and FY 2021 (\$40.000 million). In prior years, NSIN was predominantly funded through Congressional Additions but was included in the President's Budget submission for FY 2020 (\$25.000 million). FY 2022 is the first year that NSIN appears as a funded Program Element throughout the FYDP and its program mission was codified in Section 219 of the FY 2021 NDAA.

**Change Summary Explanation**

FY 2022 increase supports the National Security Academic Accelerator (NSA2) program, expands H4D efforts, expands the Propel program, and pilots additional program concepts in partnership with the Office of Small Business Programs, ManTech, SBIR office and offices of the Deputy Director of Research and Engineering for Modernization.

FY 2021 increase supports the expansion of the Hacking for Defense (H4D) program, expansion of the X-Force Fellowship Program, the inaugural cohort of the Technology and National Security Fellowship (TNSF), National Security Academic Accelerator (NSA2) Pilot activities, and the acquisition and use of commercial platforms that assist with due diligence of NSIN's early-stage venture partners and counter foreign influence and investment.

**A. Mission Description and Budget Item Justification**

NSIN executes the following programs and pilot activities, all of which are designed to enhance DoD’s access to technologists and entrepreneurs for the purposes of improving its talent pool, collaborate with universities and the early-stage venture community to develop novel concepts and solutions to end-user problems and requirements, and prototype and test new technologies to place them on the path to becoming programs of record or integrated with existing platforms.

- Technology and National Security Fellowship: a national, one-year fellowship that places STEM graduates into the immediate offices of policy makers in Congress and the Pentagon for the purposes of enhancing technical literacy and improving policy outcomes through informed understanding of emerging and nascent technologies.
- Hirethon: a national program that leverages NSIN’s existing and emerging network to pair exceptionally qualified candidates with DoD mission partners that plan to use direct or expedited hiring authorities to aid in job placement.
- X-Force Fellowship: a summer fellowship experience for current students that embeds project-based teams of graduate and undergraduate students with DoD mission partners for the purposes of developing early-stage prototypes. Occurs annually from June-August.
- Hacks: a national program that provides early-stage concept development and proof of principle solutions to DoD mission partners through dedicated 54-hour hackathons operated in conjunctions with top universities and start-ups throughout the country.
- Bootcamp: a national program that provides crowd-sourced solutions for DoD mission partners by deploying faculty from top tier research universities to bases and installations to facilitate early-stage concepts for technology and policy-based problems.
- Capstone: a national program that pairs prototyping development needs for DoD mission partners with extant engineering capstone courses from top tier research universities throughout the country. Outputs include TRL-4 prototypes that can undergo testing and evaluation.
- Starts: a national program that showcases high-TRL technologies to DoD mission partners for the purposes of enhanced tech scouting and improving technical capability gaps. Teams and companies with the technology that best meets a DoD mission partner’s needs are awarded initial prototyping or testing contracts.
- Propel: a national program that partners with commercial incubators and accelerators to sponsor particularly promising technology and early-stage ventures into cohort-based customer discovery that improves DoD end user validation.
- National Security Academic Accelerator (NSA2): a national pilot that identifies extant university IP, matches it against DoD mission partner needs, and then commercializes the technology through entrepreneurial training, recruitment, and licensing agreements. Currently being executed at four pilot sites with the intent to expand it to an additional six (6) sites in FY 2022.
