A. Mission Description and Budget Item Justification

The Army Medical Command received PE 0605013 funding to identify, explore, and demonstrate key technologies to overcome medical and military unique technology barriers. Programs include Army service level support for the Army Warrior Care and Transition System (AWCTS), the Medical Operational Data System (MODS), the Workload Management System for Nursing – Internet (WMSN), the Psychological and Behavioral Health – Tools for Evaluation, Risk, and Management (PBH-TERM), the Multidrug-Resistant Organism Repository and Surveillance Network (MRSN), the Business Intelligence Competency Center (BICC), the Mobile HealthCare Environment (MHCE), the Corporate Dental System (CDS), and the Defense Center of Excellence (DCoE).

The Navy Medical Command RDT&E funding supports the development required for those systems which are integral to Navy Medicine (i.e., Navy Medicine Online (NMO)). Navy Medicine also funds, when appropriate, a number of small-scale, opportunistic business improvements when the technology makes a sudden advance. These projects are generally not in the scope of the TRICARE Management Activity (TMA) Central Programs such as the development/integration of Defense Optical Fabrication Enterprise Management System (DOFEMS) into a fully automated system to support workload distribution, performance metrics, staffing requirements, supply management, calculation of operating costs from the current independently or manually DOFEMS system. This effort will be a web based centralized management tool and provide a standalone standard set of Lab Management software for all 26 Navy labs. Additionally, the re-design of HIV Management System (HMS) will be more user friendly, less time to perform everyday tasks and prevents the need to maintain separate databases. The re-design will also automate and minimize functions that require manual assistance and assist in fulfilling new requirements.

Exhibit R-2, RDT&E Budget Item Justification: PB 2016 Defense Health Program		Date: February 2015
Appropriation/Budget Activity	R-1 Program Element (Number/Name)	
0130: Defense Health Program / BA 2: RDT&E	PE 0605013HP / Information Technology Development	
For the Air Force Medical Service (AFMS), this program element supports IM/IT development requirements within four AFMS Chief Information Officer defined core capabilities as essential to Air Force Medical Service IM/IT mission support. Data warehousing, reporting services, systems integration, and custom application development are featured in almost all IM/IT systems and application requests. The information needs of the AFMS are growing in volume, complexity, and delivery formats. In order to meet future requirements, aggregation of more and varied data sources require increasingly complex data warehousing capabilities. Demand for dynamic analytic capability will require investments in business intelligence, predictive analytic tools, open source research data models, and emerging personalized medicine analysis. Information is still largely produced in an ad hoc manner without standard methodologies, mapping of business requirements, transparent analytic models, and distributed by office productivity software. Centralized production of standard reports, balance sheets, and dynamic query tools would relieve many managers and action officer of routine work and increase leadership decision support. AFMS medical readiness reporting and tracking has set the standard in the DoD for over a decade but multiple applications now encompass what has merged into a common process of tracking unit capability and personal health assessments. Consolidation of medical readiness applications would streamline disability, medical readiness, deployment surveillance, and flying status tracking and reporting who currently must move between multiple applications. For the Air Force, the funding in this program element provides for sustainment of the IM/IT Test Bed (IMIT-TB) capability, which is a dedicated OT location and staff encompassing the entire spectrum of healthcare services and products available in MTFs, to provide risk controlled testing of designated core and interim medical applications in a live environment. Military Health System (MHS) Health Information Technology (HIT) [previously known as Tri-Service IM/IT] - HIT activities include: Innovation and Advanced Technology; Infrastructure & Operations; Solution Delivery; Information Delivery; Cyber Security; and Portfolio Management and Customer Relations. RDT&E program includes funding for development/integration, modernization, test and evaluation for the Defense Health Agency initiatives, and any special interest that are shared within all components of the Defense Health Program (DHP), excluding the Integrated Electronic Health Record, Defense Medical Information Exchange and the DoD Healthcare Management System Modernization Program (DHMSM). The DHP RDT&E appropriation includes the following TMA initiatives: Electronic Commerce System (E-Commerce): This system was developed for centralized collection, integration, and reporting of accurate purchased care contracting and financial data. It provides an integrated set of data reports from multiple data sources to management, as well as tools to control the end-to-end program change management process. E-Commerce is composed of several major applications including: Contract Management (CM), utilizing Prism software to support contract action development and documentation; Resource Management (RM), employing Oracle Federal Financials and TED interface software to support the budgeting, accounting, case recoupment, and disbursement processes; Document Management, utilizing Document software to provide electronic storage, management, and retrieval of contract files; Management Tracking and Reporting, utilizing custom software to provide reports to assist in the management and tracking of changes to the managed care contracts as well as current and out year liabilities; the Purchased Care and Contractor's Resource Center web sites that provide up-to-date financial information for both TMA and the Services concerning the military treatment facilities (MTFs), and expenditures for MTF enrollee purchased care and supplemental care. E-Commerce includes an infrastructure of over 60 servers supporting development, test, and production. E-Commerce is employed by several hundred users in more than 7 different organizations. Project oversight and coordination must be provided to ensure that the needs of the disparate organizations are met without influencing system performance or support to any individual user. Server configurations must remain current with respect to security policies, user authorizations, and interactions with other systems and functions. All of these activities must be managed and coordinated on a daily basis.

---	----------------------------

Appropriation/Budget Activity 0130: <i>Defense Health Program I BA 2: RDT&E</i>	R-1 Program Element (Number/Name) PE 0605013HP <i>I Information Technology Development</i>
---	--

Disability Mediation Service (DMS): The VTA (Veteran's Tracking Application) has been the primary system to track, record, and report data for the IDES (Integrated Disability Evaluation System) process. The VTA is scheduled to sun-set, by VA (Veterans Affairs), and the data is being moved to another application. Migration of VTA to another application creates the requirement to allow data exchange between Service non-medical case management and new VA DES (Disability Evaluation System) IT application. The BEC (Benefits Executive Council) is looking to create a DMS (Disability Mediation Service), which is an integrator between the Services and VA.

The DMS will facilitate the improvement of non-medical case management tracking and IDES data/information management. It will eliminate redundant data entry within DoD (Department of Defense), improving data quality by capturing more data for operational reporting from the Services and WCP, decrease backlog by eliminating data entry duplication, and minimize impact to DoD Services by allowing the Services to continue using their existing/planned systems without requiring retraining on a new applications.

The DMS will be created from existing technology. It will provide a mediation service to help isolate each system from changes and uniqueness in the other systems and allow the Services and WCP to report and drill down on data that we capture during the exchange. This IT solution will not replace current DoD systems, but will require some modifications and enhancements to those systems to support the date exchange. WCP will support development costs for these efforts. Services will assume responsibility and POM costs for modifications, enhancements, and maintenance in the out years."

B. Program Change Summary (\$ in Millions)	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total

A. Mission Description and Budget Item Justification												
Previously known as Assessment Demonstration Center (ADC), Health Services Data Warehouse (HSDW) addresses and focuses on Air Force Medical Service (AFMS) Data Strategy under the DoD and AF Net Centric Enterprise Services. HSDW will develop an Enterprise Data Warehouse (EDW) and Data Marts consolidating databases and transition to a SOA architecture. Program will improve data collection, aggregation, analysis, and data visualization of medical information. New data models will allow rapid development of enterprise-wide reports utilizing Business Intelligence tools.												
B. Accomplishments/Planned Programs (\$ in Millions)								FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Title: 239B - Health Services Data Warehouse								1.112	0.717	0.908	-	0.908
Description: AFMS will purchase COTS software/licenses and build custom scripts for development of the data warehouse. The COTS software will expedite consolidation and cleansing of data, measure data quality, merge and organize data for reporting tools. These efforts will be used to complete the transition of CDM data into the HSDW.												
FY 2014 Accomplishments: For FY14 RDTE funding, the AFMS will purchase COTS software/licenses and build custom scripts for development of the data warehouse. The COTS software will expedite consolidation and cleansing of data, measure data quality, merge and organize data for reporting tools. These efforts will be used to complete the transition of CDM data into the HSDW.												
FY 2015 Plans: AFMS will continue to use COTS software to build custom scripts for development of the data warehouse. The COTS software will expedite consolidation and cleansing of data, measure data quality, merge and organize data for reporting tools. These efforts will be used to complete the transition of CDM data into the HSDW.												
FY 2016 Base Plans: AFMS will continue to use COTS software to build custom scripts for development of the data warehouse. The COTS software will expedite consolidation and cleansing of data, measure data quality, merge and organize data for reporting tools. These efforts will be used to complete the transition of CDM data into the HSDW.

A. Mission Description and Budget Item Justification

Dedicated operational test (OT) location and staff encompassing the entire spectrum of healthcare services and products available in Military Treatment Facilities (MTFs), to provide realistic, risk controlled testing of designated core and interim medical applications in an operationally realistic environment. Critical component of ongoing capability development & fielding efforts, ensuring that each is supported by an independent, unbiased assessment of effectiveness, suitability, security, and survivability in a realistic operational environment as required by the FAR 46.103, DoD 5000, and AFI 99-103. The AFMISTB is a complementary service to existing MHS developmental, integration, interoperability, and security testing facilities, forming a logical test process continuum leading to effective deployment decisions. Outcomes include decreasing life-cycle costs of IM/IT products by catching errors early in the acquisition process where they are less costly to fix, and increasing patient safety by fielding operationally tested medical information systems.

A. Mission Description and Budget Item Justification

The Army Medical Command received PE 0605013 funding for the Medical Operational Data System (MODS) to deploy modernized data visualization capabilities to enhance Army Unit and Individual Medical Readiness Reporting. MODS provides Army leadership with a responsive and reliable human resource and readiness information management data system for all categories of military and civilian medical and support personnel. MODS provide Tri-Service support through applications such as Electronic Profile, Behavioral Health, and Medical Education.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Title: Medical Operational Data System (MODS)	3.384	3.413	2.601	-	2.601
Description: Information management system to provide responsive and reliable human resource and medical readiness data for all categories of military and civilian medical and support personnel.					
FY 2014 Accomplishments: FY14 certification/funding made it possible for the MODS program to propagate and strengthen its Three-Tiered Object-Oriented Architecture making the development of critical software solutions more cost effective, well-performing, predictable, extensible and uniformed. Products developed under this architecture include all Army Deployment Health Assessments, core Period Health Assessment modules, and modifications needed for the Tri-service mandated promotion of the Behavioral Health Data Portal. FY14 funding also allowed for the MODS data warehouse to be complemented with robust data visualization tools. A proof-of-concept using these new capabilities successfully produced a static instantiation of the complete physical data design of the entire medical readiness domain for super users to analyze.					
FY 2015 Plans: FY15 funds are being used to elicit the entire business requirement and developmental design of the Electronic Profile System using the Three-Tiered Object-Oriented Architecture. This is to be proceeded by the development of a completely refactored solution. In addition, all design processes and products will be verified and validated by a senior Federally-Funded Research and Development (FFRDC) Team – MITRE. The Human Resources suite of applications will use this model in parallel. Additionally, the full production increment of MODS Data Warehouse will be executed.					
FY 2016 Base Plans:

Remarks												
D. Acquisition Strategy												
Select the business, technical, and contract actions that will minimize cost, reduce program risk, and remain within schedule while meeting program objectives.												
E. Performance Metrics												
1. MEASURE: Data Warehouse reduces total number of database maintenance hours. METRIC: % database maintenance hours = number of monthly database maintenance hours/total database maintenance hours of previous year average.												
2. MEASURE: Data Warehouse supports queries and reports with few data errors (information quality/accuracy). METRIC: % of reports and queries that contain data errors = total number of reports and queries with data errors /total number of reports and queries.												
3. MEASURE: Data Warehouse provides the data needed by users and applications (information quality/completeness). METRIC: % post-Data Warehouse = total number (post-Data Warehouse) queries and reports/total number (pre + post-Data Warehouse) queries and reports.												
4. MEASURE: Three-Tier Object Oriented Architectural Design (3TOOAD) benefits are reduced costs for implementation of new functionalities. METRIC: % of labor cost = cost of MSR for functional implementation/average cost of similar MSR from previous year(s).												
5. MEASURE: Organizational and individual impact of Data Warehouse, 3TOOAD, and Robust Business Intelligence.

Description: The Business Intelligence Competency Center (BICC) is the business intelligence capability and management processes, focused on providing actionable data at the point of service that facilitates provisioning of actionable information for MTF Commanders, AMEDD Leadership and end users.												
FY 2014 Accomplishments: FY14 funds were used to continue the finalization of the baseline code for MEDCOM 360. MEDCOM 360 is a low complexity system utilizing pre-existing aggregated data sources to present de-identified data for performance and quality reviews at the headquarters level. FY14 Funds were used to aggregate data from several legacy systems into a single user friendly information source to meet patient care needs and chronic disease management for the care team and case management. The information was aggregated up to clinic and practice management personnel and was used for performance management, with the main focus at the patient/ care team level in order to provide actionable information. Funds were used to optimize order entry reporting for pending and completed provider orders, and remaining bug fixes. Funds were used to integrate existing alerts and transitioning of care functions, providing an increased stability and performance. Funds provided user access management and security review for role based and CAC enabled access. Funds were used to coordinate CHCS Cache SQL review with MEDCOM and DHA concerning interface data exchange.

The Corporate Dental System (CDS) is the Dental digital web based DICOM image capture and viewing application.												
B. Accomplishments/Planned Programs (\$ in Millions)								FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Title: Corporate Dental System (CDS)								0.709	-	-	-	-
Description: The Corporate Dental System (CDS) is the Dental digital web based DICOM image capture and viewing application.												
FY 2014 Accomplishments: FY14 funds were used to provide all required imaging capabilities at USA dental facilities to include DICOM image view, capture, store, and forward. Corporate Dental Imaging (CDI) 1.0 provides the capability to scan the patient's CAC which also verifies patient metadata within DEERS. CDI 1.0 can now capture images using the hardware vendor's Software Development Kit (SDK) for image enhancement and filtering rather than a TWAIN driver. This version of CDI uses the SDK from Planmeca and Carestream and supports the Panograph (PX), Cephalometric (DX), intra oral (IO), and Cone Beam CT modalities. FY14 funds were also used to create image progression capabilities which allow capturing various image combinations depending on the images required for care. CDI storage server can store, forward and verify that images taken at a dental facility are stored locally and in the global repository at FT Sam Houston, TX. At the completion of this development cycle CDI became a client-side capture and web-based viewing application that includes EDI identification in the DICOM image data; enables Web viewing of the original DICOM images stored at the enterprise level, enables image enhancements that are saved as layers on top of the original DICOM, and provides reporting for completed image studies, series, and all individual I/O DICOM images taken.

Title: Mobile HealthCare Environment (MHCE)								0.273	-	0.362	-	0.362
Description: The Mobile HealthCare Environment (MHCE) is the capability of secure, bidirectional messaging and data exchange between patients, providers and clinics using any electronic device.												
FY 2014 Accomplishments: FY14 funds established an enterprise presence for the system, Mobile Health Care Environment (MHCE). This expansion provides the mobile health outreach used for patient care outside of clinical research protocols, which was a limitation prior to FY14. Additionally, the MHCE system was modernized for both the research and enterprise space to allow for the use of multimedia content, and end user tracking of interactions within the mobile app. Finally the MHCE system was enhanced to including synchronization with biosensor technologies, which will afford the DHA to provide at home monitoring of chronic conditions, such as diabetes in the future.												
FY 2015 Plans: No funding programmed.												
FY 2016 Base Plans: FY16 certification/funding will be utilized to expand the MHCE functionality to include data exchange with other systems, specifically a patient's personal health record, and enterprise systems such as their electronic health record.

Appropriation/Budget Activity 0130 / 2					R-1 Program Element (Number/Name) PE 0605013HP / Information Technology Development				Project (Number/Name) 385A / Integrated Electronic Health Record Inc 1 (Tri-Service)			
COST (\$ in Millions)	Prior Years	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total	FY 2017	FY 2018	FY 2019	FY 2020	Cost To Complete	Total Cost
385A: Integrated Electronic Health Record Inc 1 (Tri-Service)	130.693	-	-	-	-	-	-	-	-	-	Continuing	Continuing
Project MDAP/MAIS Code: 465												
A. Mission Description and Budget Item Justification												
The integrated Electronic Health Record (iEHR) was approved to provide seamless integrated sharing of electronic health data between the DoD and Department of Veterans Affairs (VA). Commensurate with the OSD AT&L Acquisition Decision Memoranda (ADM), dated July 21, 2013 and January 2, 2014, the former joint DoD and VA iEHR program has been restructured within the DoD to pursue two separate but related healthcare information technology efforts, the DoD Healthcare Management System Modernization (DHMSM) program and a redefined iEHR program. These programs report through the PEO DoD Healthcare Management Systems (DHMS) to the USD (AT&L). iEHR RDT&E is reported under the program element 0605013 through FY 2013 inclusive, but will be reported under new program element 0605023 for FY 2014 and out.												
B. Accomplishments/Planned Programs (\$ in Millions)								FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Title: Integrated Electronic Health Record (iEHR) Inc 1 (Tri-Service)								-	-	-	-	-
Description: The iEHR primary role is health care delivery services. iEHR is a collaborative effort between the DoD and VA to share Health Care Resources to improve access to, and quality and cost effectiveness of, health care as mandated by law. This investment is deeply embedded in the MHS Enterprise Roadmap as both Departments have need for modernization/ replacement of existing legacy systems. This investment will use a combination of an open architecture approach, and the purchase (in some instances) of GOTS and COTS products.												
FY 2014 Accomplishments: No funding programmed in this program element.												
FY 2015 Plans: No funding programmed in this program element.

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2016 Defense Health Program										Date: February 2015		
Appropriation/Budget Activity 0130 / 2					R-1 Program Element (Number/Name) PE 0605013HP / Information Technology Development				Project (Number/Name) 386A / Virtual Lifetime Electronic Record (VLER) HEALTH (Tri-Service)			
COST (\$ in Millions)	Prior Years	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total	FY 2017	FY 2018	FY 2019	FY 2020	Cost To Complete	Total Cost
386A: Virtual Lifetime Electronic Record (VLER) HEALTH (Tri-Service)	14.464	-	-	-	-	-	-	-	-	-	Continuing	Continuing
A. Mission Description and Budget Item Justification												
The primary goal of the VLER Health initiative is to enable the secure sharing of health information (i.e., demographic and clinical data) between DoD and external Federal and private sector partners which meets Meaningful Use (MU) requirements to improve healthcare quality, safety, and efficiency. By electronically sharing health information using national standards, that information can support tracking key clinical conditions, communicating that information to better coordinate care, and engaging patients in their own care. The VLER Health initiative provides clinicians with the most up-to-date information, potentially reducing redundant diagnostic tests, medical errors, paperwork and handling, and overall healthcare costs. These benefits, in turn, align with the MHS quadruple aim by ensuring that the military force is medically ready to deploy; the military beneficiary population remains healthy through focused prevention; patient care is convenient, equitable, safe, and of the highest quality; and the total cost of healthcare is reduced through the reduction of waste and focus on quality.												
VLER Health funding will be reflected in the Integrated Electronic Health Record Program Element 0605023 in FY 2014 and out.

423A: Defense Center of Excellence (FHP&RP)	1.177	2.287	-	-	-	-	-	-	-	-	Continuing	Continuing
Note In FY15, transferred from FHP&R (Project Code 423A) to Army (Project Code 423B).												
A. Mission Description and Budget Item Justification The Defense Centers of Excellence for Psychological Health and Traumatic Brain Injury (DCoE) is a United States Department of Defense (DoD) organization that provides guidance across DoD programs related to psychological health (PH) and traumatic brain injury (TBI) issues. The organization’s mission statement is: “DCoE assesses, validates, oversees and facilitates prevention, resilience, identification, treatment, outreach, rehabilitation, and reintegration programs for PH and TBI to ensure the Department of Defense meets the needs of the USA's military communities, warriors and families.” DCoE focuses on education and training; clinical care; prevention; research; and service member, family and community outreach. In collaboration with the Department of Veterans Affairs, the organization supports the Department of Defense’s commitment of caring for service members from the time they enter service and throughout the completion of their service. DCoE also seeks to mitigate the stigma that still deters some from reaching out for help for problems such as post-traumatic stress disorder and TBI. The organization has a leadership role in collaborating with a national network of external entities[1] including non-profit organizations,[2] other DoD agencies, academia, Congress,[3] military services and other federal agencies.[4] Public health service and civil service workers, including personnel from the Department of Veterans Affairs and individuals from all the military services as well as contract personnel comprise the staff of DCoE. DCoE’s goals include providing the necessary resources to facilitate the care of service members who experience TBI or PH concerns and ensuring that appropriate standards of care exist and are maintained across the Department of Defense. DCoE seeks to create, identify and share best practices, conducting necessary pilot or demonstration projects to better inform quality standards when best practices or evidence based recommendations are not readily available. Other DCoE goals include ensuring that program standards are executed and quality is consistent and creating a system in which individuals across the United States expect and receive the same level and quality of service regardless of their service branch, component, rank or geographic location. DCoE comprises eight directorates and six component centers responsible for TBI/PH issues. These DCoE entities execute programs, provide clinical care, conduct research, identify and share best practices and provide strategic planning for PH and TBI across the DoD.

Funds will be utilized to finalize the multi-phased upgrade and redesign of the afterdeployment.org website. Afterdeployment.org will provide the latest in self-care tools that assist with a range of adjustment concerns (combat stress, sleep problems, anger management, etc.), with an emphasis on exercise-based interactivity, community support, and multimedia applications. For the T2 Toolkit (T2T), funding would be used for the final phase of development focusing on the new generation of PH Mobile Apps that will enhance many area of PH for DoD service members, family, and veterans. <i>FY 2015 Plans:</i> No funding programmed. <i>FY 2016 Base Plans:</i> No funding programmed.

Plans noted and funded under Project 423A.					
<i>FY 2015 Plans:</i> FY15 funds are being used to continue the development, modernization, sustainment, and release of mobile apps, PH games, websites, and longitudinal services in support of the T2 Toolkit portfolio, as listed in the FY2014 Accomplishments above. This new generation of PH mobile apps, games, and websites are improving the PH outcomes for DoD Service Members, their Families, and Veterans. Continued for 2015 is the use of RDT&E funds for the Deployment Health Clinical Center's (DHCC) development of a module (FIRST STEPS) in support of Psychological and Behavioral Health. This expansion effort is intended to further the focus of the behavioral healthcare of all adult primary care. The emphasis within 2015 is to develop automated user training in lieu of direct face-to-face training for Behavioral Health personnel.					
<i>FY 2016 Base Plans:</i> FY16 funds will be used to complete the development and transition to sustainment for the electronic capabilities listed above. The T2 toolkit and its sub-components will be more fully developed in order to allow for further collaboration and remote access to tools. RDT&E funding will be utilized to continue development of mobile applications, 3D games, websites, and other applications. In addition, the DHCC FIRST STEPS module will continue to evolve and develop capabilities to tailor reporting, track data by individual service, and monitor conditions such as smoking cessation and obesity/weight management. This program will also add healthcare facilitators in behavioral activation and motivational interviewing techniques with patients.

A. Mission Description and Budget Item Justification

The NICoE Continuity Management Tool (NCMT) is a business intelligence tool to perform healthcare modeling and analysis of NICoE activities.

Major capabilities defined by the NICoE in Jun 2009 and refined in Jun 2010 prior to the program procurement in Sep 2010, are subsystems that make up the NCMT end-to-end system, and were prioritized in the following order: Continuity Management Subsystem, Scheduling Subsystem, Clinical Subsystem, Research Subsystem, Training and Education Subsystem, Administration Subsystem.

Continuity Management Subsystem: Records every interaction with a particular Warrior and his or her Family as one entity to manage initial contact, referral, screening, intake, pre-admission, admission, discharge and follow-up processes.

Scheduling Subsystem: Captures, organizes, displays the complex schedules of the NICoE. Used to manage patient appointments, the utilization of facility resources including treatment rooms, modalities, provider staff and support staff.

Clinical Subsystem: A clinical application and clinical database that includes the functions that allow the user to store, classify, analyze, retrieve, interpret, present clinical data. Allows the visualization of all of the various components of the patient’s health record: radiology, pathology, lab results, neurological assessments, etc.

Research Subsystem: Consists of the research database and the applications that allow the user to store, classify, analyze, retrieve, interpret, present data. Allows NICoE to aggregate data from disparate systems, both within the NICoE and from partner organizations, helping the research move faster, with more agility, and with purpose and direction supported by validated facts. Allows researchers to address many data challenges from a single system and transforms the way they do research.

Training and Education Subsystem: Provides the ability to share relevant research, diagnosis, treatment information with authorized users.

Administration Subsystem: Provides the ability to manage a portfolio of projects related to continuity of care, clinical operations, research, training and education functions in the NICoE.

The NCMT is supported by Three Contracts: Hosting (Provides Hardware, Software, Maintenance), System Integration (Implements NICoE Functional Requirements, Turns NICoE Ideas and Goals into Computer Screens, Templates, Applications – Capabilities) and Decision Support (Acquisition Management, Requirements Definition, Implementation Planning).

The NICoE’s missions are to:

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2016 Defense Health Program				Date: February 2015							
Appropriation/Budget Activity 0130 / 2		R-1 Program Element (Number/Name) PE 0605013HP / Information Technology Development		Project (Number/Name) 435A / NICOE Continuity Management Tool							
1) Explore novel, promising, and futuristic solutions to the complex spectrum of combat brain injury from TBI to posttraumatic stress disorder (PTSD) and other psychological injuries;											
2) Ensure – through continuous outreach and high quality health care – that America embraces those who have served and sacrificed so much on its behalf; and											
3) Train the next generation of providers in the most effective approaches to prevention, detection, and treatment options.											
Currently the established AHLTA specification does not adequately support the specialized care and continuity management integration necessary to support NICoE clinical operations and research. Additionally, AHLTA does not support the data mining and pattern recognition requirements of the NICoE.

A. Mission Description and Budget Item Justification

"Disability Mediation Service (DMS):

The VTA (Veteran's Tracking Application) has been the primary system to track, record, and report data for the IDES (Integrated Disability Evaluation System) process. The VTA is scheduled to sun-set, by VA (Veterans Affairs), and the data is being moved to another application. Migration of VTA to another application creates the requirement to allow data exchange between Service non-medical case management and new VA DES (Disability Evaluation System) IT application. The BEC (Benefits Executive Council) is looking to create a DMS (Disability Mediation Service), which is an integrator between the Services and VA.

The DMS will facilitate the improvement of non-medical case management tracking and IDES data/information management. It will eliminate redundant data entry within DoD (Department of Defense), improving data quality by capturing more data for operational reporting from the Services and WCP, decrease backlog by eliminating data entry duplication, and minimize impact to DoD Services by allowing the Services to continue using their existing/planned systems without requiring retraining on a new applications.

The DMS will be created from existing technology. It will provide a mediation service to help isolate each system from changes and uniqueness in the other systems and allow the Services and WCP to report and drill down on data that we capture during the exchange. This IT solution will not replace current DoD systems, but will require some modifications and enhancements to those systems to support the date exchange. WCP will support development costs for these efforts. Services will assume responsibility and POM costs for modifications, enhancements, and maintenance in the out years."

FY 2014 Accomplishments: The Warrior Care Program Office realigned manpower and program control during in FY 2014. Necessary project planning and requirement development have not progressed sufficiently to obtain DBT certification required to execute. Program responsibility has been assigned and project is proposed to be realigned to support the Joint Disability Evaluation System (JDES) project.						
FY 2015 Plans: Migration of VTA to another application creates the requirement to allow data exchange between Service non-medical case management and new VA DES (Disability Evaluation System) IT application. The BEC (Benefits Executive Council) is looking to create a DMS (Disability Mediation Service), which is an integrator between the Services and VA. The DMS will be created from existing technology. A. Mission Description and Budget Item Justification

DMLSS provides the Military Medical Departments one standard Department of Defense (DoD) medical logistics system. The DMLSS suite of applications provides the healthcare driven capability to support the medical logistics needs of the DoD community for critical medical commodities - pharmaceuticals and medical/surgical supplies across the continuum of care from the battlefield to tertiary care at a major DoD military treatment facility (MTF). This capability is enabled by the partnership of the Defense Logistics Agency (DLA) Defense Supply Center Philadelphia and the Military Health System (MHS) providing an industry to practitioner supply chain for the medical commodity. The DMLSS Defense Logistics Agency Wholesale (DMLSS-W) applications are funded by Defense Logistics Agency while the garrison medical treatment facilities and theater applications are funded by the Defense Health Program. The current DMLSS system provides full spectrum capability for medical logistics management. Basic functionality includes stock control, Prime Vendor operations, preparation of procurement documents, research and price comparison for products, property accounting, biomedical maintenance operations, capital equipment, property management, inventory, and a facility management application that supports the operations of a fixed medical treatment facility physical plant and supports Joint Commission on the Accreditation of Healthcare Organizations (JCAHO) accreditation requirements. DMLSS, in coordination with the Theater Medical Information Program – Joint (TMIP-J), is providing to the Services and the Combatant Commanders the functional logistics capabilities necessary to rapidly project and sustain joint medical capabilities for medical logistics management of theater medical materiel operations. Current products deployed to the theater include the DMLSS Customer Assistance Module (DCAM), a medical logistics ordering tool that allows users to view their supplier's catalog and generate electronic orders. Primarily focused on the theater environment, DCAM automates the Class VIII supply process at the lower levels of care, and allows non-logisticians, who maintain their medical supplies as an additional duty, to electronically exchange catalog, order, and status information with their supply activity.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Title: Defense Medical Logistics Standard Support (DMLSS) (Tri-Service)	4.478	3.978	1.933	-	1.933
Description: Development, integration and modernization of DMLSS modules.					
FY 2014 Accomplishments: Develop additional logic in the Medical Master Catalog (MMC) to identify to the end user those products that have been standardized by the Medical Material Enterprise Standardization Office (MMESO) and those items that are sourced by a preferred distribution channel or at an available better price.					
FY 2015 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Support critical functional and technical changes in the Medical Logistics environment to include: implement additional pharmaceutical (Holding Orders, Wide Area Work Flow (WAWF), Real-time Price verification) ordering logic and catalog data for Pharmacy Global contract award. Implement additional business logic to support equipment maintenance planning and equipment lifecycle management. Expand the Master Ordering Facility functionality to support DoD support of Civil Authorities contingency operations. Provide foundational support for regionalization of DMLSS application, reducing the deployed footprint without compromise in performance and quality. <i>FY 2016 Base Plans:</i> Support DMLSS Regionalization and data consolidation, reducing the deployed footprint (Hardware and License) without compromise in performance and quality and increasing access to near real time information.

Appropriation/Budget Activity 0130 / 2					R-1 Program Element (Number/Name) PE 0605013HP / Information Technology Development				Project (Number/Name) 480F / Executive Information/Decision Support (EI/DS) (Tri-Service)			
COST (\$ in Millions)	Prior Years	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total	FY 2017	FY 2018	FY 2019	FY 2020	Cost To Complete	Total Cost
480F: Executive Information/Decision Support (EI/DS) (Tri-Service)	3.127	2.809	-	2.551	-	2.551	1.791	-	-	-	Continuing	Continuing
A. Mission Description and Budget Item Justification												
EI/DS is comprised of a central datamart Military Health System Data Repository (MDR) and several smaller datamarts: MHS Management Analysis and Reporting Tool (M2), Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE), and Purchased Care Operations Systems -TRICARE Encounter Data (TED) & Patient Encounter Processing and Reporting (PEPR). Many of these operate within a Business Objects XI (BOXI) environment. EI/DS manages receipt, processing, and storage of over 155 terabytes of data from both Military Treatment Facilities (MTF) and the TRICARE purchased care network systems. These data include inpatient dispositions, outpatient encounters, laboratory, radiology, and pharmacy workload, TRICARE network patient encounter records, TRICARE mail order pharmacy patient encounter records, beneficiary demographics, MTF workload and cost information, eligibility and enrollment, Pharmacy Data Transaction Service data, customer satisfaction surveys, and data associated with the Wounded Warrior care. EI/DS provides centralized collection, storage and availability of data, in various data marts, to managers, clinicians, and analysts for the management of the business of health care.												
B. Accomplishments/Planned Programs (\$ in Millions)								FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Title: Executive Inforamtion/Decision Support (EI/DS) (Tri-Service)								2.809	-	2.551	-	2.551
Description: Development, modernization, upgrades and testing for various EI/DS modules.												
FY 2014 Accomplishments:												
• Completed testing for Central Billing Events Repository in the Military Health System Data Repository (MDR) to perform billing and collections activities.												
• Provided the capability to download the National Plan and Provider Enumeration System file and to match the National Provider Identifier (NPI) and Provider Record within TRICARE Encounter Data (TED). Modify Patient Encounter Processing and Reporting (PEPR) to report revenue codes and NPI.												
• Completed transition of International Classification of Diseases (ICD)-10 codes within TED.												
• Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE)												
- Developed a Fused Detection and Dashboard capability that will reduce the number of “false positive” alerts.												
- Provided a user-defined customizable dashboard functionality; and,												
- Provided drilldown capabilities so users can see the raw data and specific patient details underlying the “fused alert.”												
FY 2015 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
No funding programmed.					
<i>FY 2016 Base Plans:</i> Develop the Enhanced Query capabilities which will substantially expand the scope of the current query functionality. The enhanced query functionality will allow user to include parameters from all current and future data sources to create specific disease case definitions. The query will also enable the user to define a specific population, e.g., one or more MTFs, age-groups, etc. This enhanced functionality will expand ESSENCE's scope beyond the existing broad syndromes and allow users to monitor specific diseases, e.g., influenza. Develop an enhanced reference table management capability. This will allow designated Service Authorized "Super Users" to update key reference tables thus unlocking a cost traditionally borne by the Tier III support vendor and allow greater agility and more accurate results within the ESSENCE Program

A. Mission Description and Budget Item Justification

The Health Artifact and Image Management Solution (HAIMS) enables the DoD and the VA healthcare providers to have global access and awareness of artifacts and images (A&I) generated during the healthcare delivery process. HAIMS will provide the new capability for users throughout the MHS to be aware and have access to A&I that have been registered with the central “system”, currently on local workstations and Military Treatment Facility (MTF) Picture Archive and Communications Systems (PACs). As patients move through the continuum of care from Continental United States to Theater and then return to DoD sustaining bases facilities, healthcare A&I moves seamlessly and simultaneously with the patient. This advances several MHS strategy initiatives such as achievement of paperless record, global access of Wounded Warrior scanned documents, and an alternative to finding storage space for paper records of merging MTFs. HAIMS will supply access to VHA and other external A&I both inside and outside the Military Health System (MHS) Electronic Health Record (EHR). Funding has been provided within this program element in prior years for HAIMS before it was identified as its own system in the budget cycle. HAIMS will experience Incremental development as each new requirement is identified for FY 2014 and FY 2015.

B. Accomplishments/Planned Programs (\$ in Millions)

480K: <i>Integrated Federal Health Registry Framework (Tri-Service)</i>	-	2.591	1.093	0.450	-	0.450	-	-	-	-	Continuing	Continuing

A. Mission Description and Budget Item Justification

The purpose of an integrated Federal Health Registry capability is to provide a viable solution to fulfill a critical need for improved sharing and exchange of Service member and Veteran health information and data between the Department of Defense - Health Affairs and the Department of Veterans Affairs-Veterans Health Administration communities of interest (COIs) as mandated in Section 1635 of the 2008 National Defense Authorization Act (NDAA, 2008). This ability to share and exchange vital health care data between the respective specialties of care is essential to conduct longitudinal analyses necessary to improve patient care and quality of life outcomes. To maximize efficiencies and most effectively meet the needs of the functional communities, the Centers of Excellence (CoEs) have developed a consolidated framework solution for an integrated Federal Health Registry capability. This effort provides a comprehensive solution that meets the specialty care needs of each of the Services and Veteran Affairs that are represented by the Joint DoD and VA CoEs, (Army-Extremity Trauma and Amputation Center of Excellence; TMA-Defense Centers of Excellence for Psychological Health and Traumatic Brain Injury; Navy-DoD/VA Vision Center of Excellence; Air Force-Hearing Center of Excellence; and JTFCAPMED-National Intrepid Center of Excellence).

A. Mission Description and Budget Item Justification

The Theater Medical Information Program - Joint (TMIP-J) integrates components of the Military Health System sustaining base systems and the Services' medical information systems to ensure timely interoperable medical support for mobilization, deployment and sustainment of all Theater and deployed forces in support of any mission. TMIP-J enhances the clinical care and information capture at all levels of care in Theater, transmits critical information to the Theater Commander, the evacuation chain for combat and non-combat casualties, and forges the theater links of the longitudinal health record to the sustaining base and the Department of Veterans Affairs. TMIP-J is the medical component of the Global Combat Support System. TMIP-J provides information at the point of care and to the Theater tactical and strategic decision makers through efficient, reliable data capture, and data transmission to a centralized Theater database. This delivers TMIP-J's four pillars of information support through the electronic health record, integrated medical logistics, patient movement and tracking, and medical command and control through data aggregation, reporting and analysis tools for trend analysis and situational awareness. TMIP-J fulfills the premise of "Train as you fight" through the integration of components which are identical or analogous to systems from the sustaining base. TMIP-J adapts and integrates these systems to specific Theater requirements and assures their availability in the no- and low- communications settings of the deployed environment through store and forward capture and transmission technology.

TMIP-J RDT&E is reported under the program element 0605013 through FY 2013 inclusive, but will be reported under new program element 0605023 for FY 2014 and out.

TMIP-J fulfills the premise of "Train as you fight" through the integration of components which are identical or analogous to systems from the sustaining base. TMIP-J adapts and integrates these systems to specific Theater requirements and assures their availability in the no- and low-communications settings of the deployed environment through store and forward capture and transmission technology. TMIP-J RDT&E is reported under the program element 0605013 through FY 2013 inclusive, but will be reported under new program element 0605023 for FY 2014 and out. <i>FY 2014 Accomplishments:</i> No funding programmed. <i>FY 2015 Plans:</i> No funding programmed. <i>FY 2016 Base Plans:</i> No funding programmed.

A. Mission Description and Budget Item Justification

Other Related Technical Activities includes funding for Information Technology activities common to multiple or all Tri-Service systems/programs and can not be associated with any one individual Tri-Service initiative, which includes enterprise Messaging and other common IT services requirements. Funding is included in FY 2012 for International Classification of Diseases and Related Health Problems 10th edition (ICD-10). ICD-10 funding for FY 2013 and out is shown in the appropriate initiative's Accomplishments/Planned Program sections within this program element.

D. Acquisition Strategy

Evaluate and use the most appropriate business, technical, contract and support strategies and acquisition approach to minimize costs, reduce program risks, and remain within schedule while meeting program objectives. Strategy is revised as required as a result of periodic program reviews or major decisions.

E. Performance Metrics

Each activity establishes performance measurements. Program cost, schedule and performance are measured periodically using a systematic approach. Since this is an enterprise initiative which crosses multiple initiatives, performance metrics of the common activities are part of and/or contributing factors in the measurement of the performance metrics of the individual initiatives.

A. Mission Description and Budget Item Justification

The DHP, RDT&E appropriation includes the following TMA initiatives: Electronic Commerce System(E-Commerce): This system was developed for centralized collection, integration, and reporting of accurate purchased care contracting and financial data. It provides an integrated set of data reports from multiple data sources to management, as well as tools to control the end-to-end program change management process. E-Commerce replaces multiple legacy systems. E-Commerce consists of several major subsystems including: CM subsystem utilizing Prism software to support contract action development and documentation; the RM subsystem utilizing Oracle Federal Financials and TED interface software to support the budgeting, accounting, case recoupment, and disbursement processes; the document management subsystem utilizing Documentum software to provide electronic storage, management, and retrieval of contract files; Management Tracking and Reporting subsystem utilizing custom software to provide reports to assist in the management and tracking of changes to the managed care contracts as well as current and out year liabilities; the Purchased Care Web site that provides up-to-date financial information for both TMA and the Services concerning the military treatment facilities' (MTFs') expenditures for MTF enrollee purchased care and supplemental care. E-Commerce includes 5 major subsystems and over 60 servers supporting development, test, and production. The system will be utilized by several hundred users in more than 7 different organizations. Project oversight and coordination must be provided to ensure that the needs of the disparate organizations are met without impacting the system performance or support to any individual user. Server configurations must be kept current in terms of security policies, user authorizations, and interactions with other systems and functions. All of these activities must be managed and coordinated on a daily basis.

All of these activities must be managed and coordinated on a daily basis.					
<i>FY 2014 Accomplishments:</i> Implemented enhancement solutions to improve management of private sector care contracts, processing of private sector care healthcare claims, compliance with DoD policy and guidance, and private sector care operational efficiency. Completed healthcare claims and financial processing and reporting changes to enhance compliance with IPv6, SFIS, PDS, and SLOA direction. Modified contract management and healthcare claims processing to accommodate healthcare policy and contract changes. Improved private sector care efficiencies and productivity by enhancing contract performance assessment, deliverable processing, and refining operational and financial reporting. Continued receiving unqualified audit opinions through the upgrade of accounting, budgeting, and audit processing. Finished the first phase of the pharmacy management modernization activity to support the tracking of pharmaceutical manufacturer refunds and collections. Implemented a change in appropriation order at the beginning of the fiscal year.					
<i>FY 2015 Plans:</i> -Program transfer in FY 2015 to project 482A.					
<i>FY 2016 Base Plans:</i> No funding programmed.

A. Mission Description and Budget Item Justification												
Theater Enterprise-Wide Logistics System (TEWLS) supports critical medical logistics warfighter requirements in a net-centric environment. It ties the national, regional, and deployed units into a single business environment. It creates the necessary links for planners, commercial partners, and AMEDD logisticians to accomplish essential care in the theater through a single customer facing portal. It removes disparate data and replaces it with a single instance of actionable data. TEWLS supports today’s modern, non-contiguous battlefield at the regional, COCOM, and Service levels by leveraging emerging Medical Materiel Executive Agency and Theater Lead Agent infrastructure concepts to manage the entire medical supply chain from the industrial base to the end user.

Description: Navy Medicine CIO Management Operations - IM/IT RDT&E requests will be vetted through the Bureau of Navy Medicine (BUMED) Governance Process. BUMED IM/IT CIO Governance will monitor progress and milestones every six months.												
FY 2014 Accomplishments: This is an ongoing activity recently enacted by the Navy Medicine IM/IT process which further defines/transforms future IM/IT Medical Program Enhancements and Medical Capabilities.												
The development/integration of Defense Optical Fabrication Enterprise Management System (DOFEMS) into a fully automated system to support workload distribution, performance metrics, staffing requirements, supply management, calculation of operating costs from the current independently or manually DOFEMS system. This effort will be a web based centralized management tool and provide a standalone standard set of Lab Management software for all 26 Navy labs.												
The re-design of HIV Management System (HMS) so that it is user friendly, minimizes the amount of time required to perform everyday tasks and prevents the need to maintain separate databases, automate and minimize functions that require manual assistance and assist in fulfilling new requirements.												
The development/integration of the Corporate Dental System (CDS) will replace the current Navy Dental system, Dental Common Access System (DENCAS). The CDS is the Military Health System Enterprise solution providing for the accurate collection, processing, and presentation of dental workload, readiness, scheduling,

A. Mission Description and Budget Item Justification

The Navy Medicine Online System (NMO) is the designated data broker for Navy Medicine. NMO collects individual readiness information from legacy Navy Medicine data systems (i.e SAMS,DENCAS, MEDBOLTT, etc.). NMO transmits select information to MRRS to support DoD IMR reporting, DHIMS Force Health Protection, Master CMS, and other Navy systems. NMO also provides the programs used to manage the medical waiver process and to track USNA midshipmen medical issues. The goal of this RDT&E effort is to merge NMKMS into Navy Medicine Online (NMO) as a data broker, to establish a single operational data warehouse for Navy Medicine operational data, as well as to support programs for managing medical staffing planning and operational workload reports.
