Results	70
Discussion	73
Appendices	77
Present Status and Work Planned. By G. C. Akerlof	83
Discussion of work to be continued and new problems to be attacked	84
The effect of various substances added to the ammonia on the yield of hydrazine obtained	86
Problems associated with the design of large reactors and the introduction of a solvent in the discharge	89

ABSTRACT

This report covers work now in progress or planned for various phases of a study of the formation of hydrazine from ammonia in an electric discharge. First are given a series of short reports by Dr. J. M. Honig on some theoretical aspects of our problems; then follows reports by Drs. William Cramer and R. D. Goodwin on experimental data obtained and conclusions to be derived from them. Finally, a review of work planned for the immediate future is given.
