Richard H. Fleming
Executive Officer

INTRODUCTION

This report contains inshore data collected from March through August 1952 by University of Washington personnel aboard the Department of Oceanography research vessel BROWN BEAR and the School of Fisheries research vessel ONCORHYNCHUS. Station location charts are presented before the data for each cruise (see pages 1, 5, 9, 18, 35 and 39. BROWN BEAR Cruise No. 1 was partially carried out in offshore waters. Additional inshore data not contained in this report were obtained with the Salinity-Temperature-Depth Recorder (1) and various current meters.

Station Numbering System

All stations occupied by the BROWN BEAR are numbered consecutively, independent of their location. Stations occupied by the ONCORHYNCHUS are numbered consecutively in a second series prefixed by the letter A.

Sampling Bottles

Water samples were taken with Nansen bottles, enlarged modified $2\frac{1}{2}$ -liter Knudsen bottles and Fjarlie bottles (2).

Determination of Properties

Deep-sea reversing thermometers were used to determine temperature. Copenhagen standard sea water was used exclusively as the

standard in the determination of salinity of the sea water. Dissolved oxygen was determined by the modified Winkler method described by Thompson and Robinson (3). Soluble phosphate, observed only on Cruise 8a, was determined by the method described by Thompson and Robinson (4). The depths reported for sub-surface observations were calculated from measured wire angle, unprotected reversing thermometer readings, and curves of wire length minus thermometric depth versus wire length (L-2), as described by LaFond (5).

Data

The time at which the messenger was dropped on the first cast is listed for the +8 time zone. Positions are given to the nearest 0.1 minute. Depth in fathoms was obtained with the aid of a Navy NMC echo sounder aboard the BROWN BEAR and a Bendix Depth Finder Model DR-3 aboard the ONCORHYNCHUS. Weather is reported in the Navy bathythermograph weather code given in H. O. Publication No. 606-c, except in cases where the only weather phenomenon reported is the state of the sky. For the state of the sky the following symbols were used: b., clear sky; b.c., blue sky with detached clouds; c., sky mainly cloudy; and o., sky overcast. Wind velocity is reported in knots. Air temperature is reported in degrees Fahrenheit.

All data are actual observed values. The maximum depth of sampling was governed by the depth of water. All clearly questionable data have been excluded.

The presentation of these data in this form does not constitute publication. Subsequent, more rigorous analyses of these data may disclose errors which are not apparent at this time.
