- Page IV. Route 111d. Amend "Mühlhausen" to read "Zühlhouse".
- Page 1. Generaldirektion der Werkstätten.
After Kassel add Vienna (Wien).
- Page 2. State Railway Construction Divisions.
Delete whole paragraph.
- Page 3. Traffic.
Amend paragraph to read:
"The following statistics, computed from percentage traffic increase figures given by Dr. Canzenmüller"
- Page 4. 14. Itineraries.
add
Detailed information on major bridges and tunnels is given in reports I.S.T.D./Q/317B and 317C respectively.
- Page 135. Route 112. Offenburg - Konstanz.
General Details.
3. Track: Amend to read "Double throughout".
13. Capacity: Amend to read "48 trains per day each way with a net train load of 200 tons military stores, throughout from Offenburg to Konstanz.
- Page 137. Route 121. Lindau - Innsbruck.
Note. Details of bridges and tunnels have been taken from the original profile of line, reproduced as Plans 58a and 58b, and do not include the tunnels at 88.3 and 90.0 Km of c.1100m and 300m respectively, necessitated by the great landslip of 1892.
- Page 191. 88.0 Km. Wald (Arlberg) to read
" 88.0 Km. Wald (Arlberg) PL. (440m) W.
or Dannofer. Electric sub-station.
Delete
88.2 Km Dannofer.
Insert
88.3 Tunnel c.1100m.
90.0 Tunnel c. 300m.

NOTE. The following should be endorsed on the Cover
of Report L.S.T.D./C/317:

**"This Fascicle should be read only in conjunction
with the Amendments."**

For details of contiguous Lines refer to:—

I.S.T.D./C/240	NORTH ITALY	Sept. 1943
I.S.T.D./D 324	MIDDLE DANUBE	May 1944
I.S.T.D. C/320	EASTERN FRANCE	Apr. 1943
I.S.T.D./C 320 Amdt. I	" "	About to issue
I.S.T.D./C 316	NORTH-WEST GERMANY	Jan. 1944

INTRODUCTORY NOTE

In addition to correcting omissions and errors in the existing report I.S.T.D./C/317, the object of I.S.T.D./C/317A is to amplify the information already given in the existing report, particularly so far as the principal railway junctions and centres are concerned, and to provide a link with the Northern Italy and Middle Danube reports, by the inclusion of itineraries of the principal connecting lines from Italy and Western Austria.

LIST OF PLANS

(In separate folder)

Plan

1. Line indicator map
2. Diagram of Reichsbahn organisation
3. Diagram of standard German S.49 rail—cross section
4. Standard German rail fastenings
5. Sectional view of "K" pattern permanent way with S.49 rails on steel sleepers
6. Sectional view of "K" pattern permanent way with S.49 rails on wooden sleepers
7. Section of double track formation
8. Section of single track formation
9. Signal indications on German State railways
10. Drawings of German locomotive types
- 10a. Photographs of Class 44, 3 cylinder goods locomotive
11. Class 61, 2 cylinder express locomotive
- Class 56, 2 cylinder goods locomotive
12. Photographs of Class 50 and 52 goods locomotive
13. Schedule of leading particulars of principal Reichsbahn locomotives
14. Schedule giving classification of former Reichsbahn locomotives

For present state of plans see LIST OF PLANS included
in separate folder.

20. Kunze-Knorr goods brake
21. Diagram of drawgear and couplings for goods wagons
22. Diagram of types of buffers for goods and passenger stock
23. The Scharfenberg automatic coupling
24. Aschaffenburg, location diagram of area
25. Darmstadt, location diagram of area
26. Frankfurt, location diagram of area
- 26a. Frankfurt, air photograph of main passenger and goods stations
- 26b. Frankfurt, diagram of Nied locomotive works
- 26c. Frankfurt, air photograph of Ost station
- 26d. Frankfurt, air photograph of main goods station
27. Hanau, location diagram of area
28. Kaiserslautern, air photograph
- 28a. Kaiserslautern, diagram of layout of railway workshops
29. Konz Karthaus, location diagram of area
- 29a. Konz Karthaus, air photograph
30. Koblenz, location diagram of area
- 30a. Koblenz, air photograph of Koblenz Lutzel
- 30b. Koblenz, air photograph of Koblenz Mosel
31. Mannheim and Ludwigshafen, location diagram of area
- 31a. Mannheim and Ludwigshafen, air photograph
- 31b. Mannheim, air photograph of marshalling yard
32. München, location diagram of area
- 32a. München, diagram of München Freimann workshops
- 32b. München, air photograph
- 32c. München, air photograph
- 32d. München, air photograph of Freimann workshops
- 32e. München

Plan

33. Neunkirchen, air photograph
34. Nürnberg, location diagram of area
- 34a. Nürnberg, air photograph of Nürnberg South
- 34b. Nürnberg, air photograph of Nürnberg Central
35. Offenbourg, air photograph
36. Regensburg, location diagram of area
- 36a. Regensburg, air photograph
37. Saasbrücken, location diagram of area
- 37a. Saasbrücken, diagram of layout of Burbach workshops
- 37b. Saasbrücken, air photograph
38. Strasbourg, location diagram of area
39. Stuttgart, location diagram of area
- 39a. Stuttgart, air photograph of main station
- 39b. Stuttgart, air photograph of locomotive depot
- 39c. Stuttgart, air photograph of Bad Cannstatt

AMENDMENTS TO I.S.T.D./C/317

Page 1. Introduction

(1) For "Maps and Plans" read "Map of System."

Itineraries

Route 64. Amend "LAUTERBECKEN-GROMBACH" to "LAUTERBECKEN-GRUMBACH."

Route 65. For "NEUSTADT" read "NEUSTADT (WEDNITZ)."

Route 67. Amend to read "KARLSRUHE-GRABEN-NEUDORF-MANNHEIM-DARMSTADT-FRANKFURT."

Route 70. "GRABEN-NEUDORF" should read "GRABEN-NEUDORF."

Route 71. "NEUSTADT" should read "NEUSTADT (WEDNITZ)."

Route 78. Amend title to read "BIELEFELD-BACKNANG-SCHWAB HALL-HEIMTAL."

Page 2

Route 84. Amend to read "INGOLSTADT-DONAUWORTH-GÜNZBURG."

Route 90. For "NEUSTADT" read "NEUSTADT (ALBACH)."

After Route 91 insert "For revised list of itineraries including supplementary routes see C/317A."

Page 3. Introduction

Insert "C/317A has been prepared to cover additional selected lines in the quadrilateral area FRANKFURT-EGGEN-SELZBURG-BASEL, with connecting lines from the Italian border."

1. MAP OF SYSTEM

Add "A further diagram has been prepared covering the supplementary routes described—see Plan 1."

2. GENERAL DESCRIPTION OF SYSTEM

For "KARLSRUHE" read "KARLSRUHE" and add the following to the list of Railway divisions:
ERFURT REGENSBURG INNSBRUCK

Add "The supplementary routes will cover principal routes running N. from Switzerland and Italy, and E. to Czechoslovakia, and Austria."

3. ORGANISATION AND PERSONNEL. (a) Organisation.

Para. 1. After German State Railway insert "See Plan 2 for diagram of Reichsbahn organisation."

Page 4

Para. 4. State Railway Divisions.

After "NÜRNBERG" delete divisions and add "Erfurt, Regensburg and Innsbruck divisions."

Para. 9. District Operating and Engineering Offices. Add "District traffic matters are centrally controlled from the district."

Para. 11. Main Railway Repair Shops. At end of para. add "The Aufbesserungswerke in the area covered by this report are at Stuttgart and München."

Page 5

State Railway Central Office (Reichsbahn Zentralämter). Delete existing para. and substitute the following:

"The building and maintenance of rolling stock at the disposal of the German Railways (including Occupied Countries) is directed from the Reichsbahn Zentralämter (R.Z.A.), which also deal centrally with the question of stores, purchases, technical design and development for the whole of the Reichsbahn. There are two of these Central Offices, one at Berlin and the other at Munich."

The internal organisation of each RZA is as follows: chairman, deputies, and auxiliary personnel.

Matters concerning wagon building are in the hands of a Hauptwagenamt—Berlin.

The Berlin RZA has the following experimental offices:

1. For locomotives and motorised wagons—Grünwald.
2. For brake testing and research—Grünwald.
3. For wagons—Grünwald.
4. Chemical—Brandenburg-West.
5. For testing bearings and castings for bearings—Göttingen.
6. For energy and heat economy—Tempelhof.
7. Chemical in Munich.
8. Mechanical in Munich.

In addition, the RZA Berlin is over the following offices:

The RZA Berlin office for street vehicles and traction machines in the garage on the Markgrafendamm.

Reception offices of the Reichsbahn:

BERLIN I	DRESDEN	MANNHEIM
BERLIN II	HAGEN	MÜNCHEN
BRESLAU	KÖLN	WIEN
DUISBURG		

Coal reception offices in Essen and Gleiwitz.

Matters pertaining to the construction of new railway rolling stock are attended to direct by the Central RZA Offices.

Railway repair workshops are under the supervision of the RZA offices through the intermediary of the Generaldirektion d. Werkstätten (GDW). There are 10 of the latter and each of them has a group of workshops subordinated to it.

Generaldirektion d. Werkstätten:

BERLIN	HAMBURG	MÜNCHEN
BRESLAU	KÖLN	STUTTGART
DRESDEN	KÖNIGSBERG	KASSEL "
	(Pr)	

After para. 10 insert the following:

"Electrical Administration Office (Elektrische Oberbetriebsleitung)"

The administration of all electric traffic matters, power stations, and railway transformers, is directed

from Innsbruck the regional managements being as follows:

Traffic (Electric Management)—

MITTELTEISE (RDB Breslau)
MULDENTZEN (RDB Halle)
MÜNCHEN-PASING (Route 122)
INNSBRÜCK (Route 121/3)

Power and Transformer stations are given under Section 7.

State Railway Construction Divisions (Reichsbahndirektion)

All road and building construction in the Reichsbahn is directed from two Reichsbahndirektion, one at München and the other at Berlin.

The München establishment consists of 27 offices, of which 1-19 control building, whilst the remainder deal with machinery and technical matters."

(b) PERSONNEL

After Reichsbahn (line 2) add "as a whole."

Page 6

4 (a) Add at end of paragraph:

"The lengths of individual routes dealt with in this report are given in the preamble to each line description."

(b) LOADING AND STRUCTURE GAUGE.

Structure Gauge: Lines 4, 6, 8, delete "Maximum" and substitute "Minimum."

Add the following paragraph:

"The structure and loading gauges for the Austrian Lines are the same as for the German lines."

Page 8

5 (a) "width of rail" should read "weight of rail."
Add "For sectional diagram of the standard S.49 rail see Plan 3."

5 (b) Add "For drawings of rail fastenings and permanent way components see Plans 4 and 5."

5 (c) Add "For sectional drawing of 'K' pattern permanent way on steel and wooden sleepers see Plans 5 and 6."

(d) Add "For sectional drawing of double and single track formation see Plans 7 and 8."

(e) "1929 3683" should read "1929 3383."

Para. (g), (f), and (d) should be (f), (g), and (h)

Page 9

Section 5 (i), add note "see Section 15 on Mountain Railways" (C/317A, p. 4).

6 (b) SIGNAL TYPES AND ASPECTS.

Para. 2, line 1. Delete "advance signals" to "disc type" and substitute "Distant signals (Vorsignale) are of disc type."

Lines 14 and 20. Delete "advance signal" and substitute "distant signal."

After para. 3 add "For various types of signals and their aspects see Plan 9."

Page 10

Para. 3, line 11. Delete "advance" "distant" signal" and substitute "distant signal."

(v) ELECTRIFICATION. Delete whole section and substitute the following:

"In 1937, the Reichsbahn system included the following total length of electrified lines:

Route length—	Km.
Single Track	599
Double Track	1,639
Multiple Track	25
Total	2,263

Of the lines described in this report, including supplementary routes, the following are electrified:

Route

82. STUTTGART-MÜNCHEN
83. AUGSBURG-TRAUCHTLINGEN
87. NÜRNBERG-TRAUCHTLINGEN
101. NÜRNBERG-HOCHSTADT-MARKTZEULN
106. MÜNCHEN-REGENSBURG
124. SALZBURG-RÖSENHEIM
110. BASEL-LORRACH-SCHOPFHEIM
- 111b. FREIBURG-NEUSTADT
- 111c. TITISEE-SALZBURG
115. TÜBINGEN-PLÖCHINGEN
121. LINDAU-INNSBRÜCK
122. INNSBRÜCK-PARTENKIRCHEN-MÜNCHEN
- 123a. BRENNER-INNSBRÜCK-KUPFSTEIN
123. KUPFSTEIN-ROSENHEIM-MÜNCHEN
124. WÖRGL-ST. JOHANN-SALZBURG
125. SPITAL MÜLLSTÄTTESSEE-SCHWARZACH ST. VEIT

Power for German lines is obtained from Hydro-electric stations which, in most cases, do not belong to the Reichsbahn but are State owned and also supply industrial establishments in the areas. With the exception of the lines in the Titisee area, current is supplied by overhead transmission on the standard system for German railways, i.e. 15 kV a.c. 16 2/3 cycles single-phase. The Höllental and Dreiseen Railways (Titisee) areas are supplied by power from the general supply system of the country (20 kV single-phase 50 cycle) by means of Scott connected transformers; transmission, as in the case of the other lines, is by the overhead method. Illustrations of overhead equipment in various areas are given in photographs 1-8.

The following is a list of the principal power stations:

(i) München Area:

- (a) Walchensee power plant—situated south of München, near Garmisch head, with Walchensee lake as water storage basin; 2 single-phase sets, each of 10,650 kVA.
- (b) Mittlere-Isar group of power plants—situated north-east of München: 4 single-phase sets of 12,000 kVA each, installed at the Eitting and Aufkirchen power plants; one transformer set of 10,000 kVA installed at Pfrombach power plant

(ii) Salzburg Area:

- (a) Saalbach power plant, near Bad Riechenhall.
- (b) Gartenau power plant, near Schnellenberg.
- (c) Mallnitz (Route 125).

(iii) Stuttgart Area:

- Munster power plant.

(iv) Basel Area:

- Ryburg-Schwarstadt (Route 110).
- Rheinfelden (Route 113).

(v) Innsbruck Area:

- Rast.
- Achensee (Route 121).

The principal sub-stations are as follows:

Route	
82.	Stuttgart, Neu Ulm, München (Pasing)
85.	Meitingen
87.	Grönhart, Nürnberg
105.	München-Pasing, Landshut
124.	Trautwein Rosenheim
111b and c.	Titisee
115.	Stuttgart
121.	Darwen, Flirsch, Roppen, Ziel, Feldkirch
122.	Murnau, München-Pasing
123.	Rosenheim, München-Pasing
123a.	Mairei, Hall, Wörgl
124.	Wörgl, Kitzbühel, Saalfelden, Schwarzach-St.-Veit, Golling
125.	Mallnitz, Schwarzach-St.-Veit

The standard sub-station on the German State Railways comprises static transformers at 5,000-6,000 kVA and the average distance between sub-stations is from 50-60 km. Voltages of transmission from the power stations to the sub-stations are between 8 kV and 10 kV."

Page 12

(8a) Insert at end of section "Illustrations of German steam locomotives, and schedules giving more detailed information on steam locomotives, are given in Plans 10-14. A schedule of leading particulars of electric locomotives is given in Plan 15 and illustrations of certain types in Photographs 4-6a."

Page 14

(8c) Insert "A revised list of locomotives depots is given in C/317A, p. 17, Table 1."

Page 15

(8c) Add "For revised list of Railway Workshops see C/317A, p. 19, Table 2."

Page 16

After 8th paragraph insert, "For illustrations of German State Railways Passenger Rolling Stock see Plan 16."

Page 19

After 2nd paragraph insert: "For illustrations of Freight Rolling Stock see Plans 17-17c."

(9b) BRAKING EQUIPMENT

Para. 2 add: "Plans 19 and 20 give the layout and details of the Kunze-Knorr (Kkg) and the Hildebrand Knorr ("L.kg") goods brakes."

Para. 3 add: "Plan 18 illustrates the type of temporary fitting for unfitted vehicles, together with the method of fixing."

Para. 4 for "caboose" substitute "brake castle," and add "for illustration see Plan 17c."

(9c) BUFFING AND DRAW GEAR

Para. 1 add: "Plan 22 illustrates both types employed."

Para. 2 add: "For illustration see Plan 21."

Para. 3 add: "See Plan 23."

(9d) ROLLING STOCK WORKSHOPS

Add: "for revised list of workshops see C/317A, p. 19, Table 2."

Page 20. Traffic

(12a) Add: "The following statistics given by Dr. C. G. Müller, Secretary to the German Min."

try of Transport, in his speech on 7th December, 1943, illustrate the increase in traffic experienced by the Reichsbahn since the outbreak of war.

	1932	1938	1943
Passenger traffic	millions	millions	millions
No. of passengers, excluding forces	1,305	1,975	3,400
Passenger/Km.	20,811	56,123	83,428
Goods traffic			
Net ton/km.	44,410	88,525	52,591
Axle/km.	13,499	23,391	24,295
Train/km.	191	314	477
Wagons placed	31	45	45

(10b) WEIGHTS AND SPEEDS OF TRAINS

Para. 3, line 3. Delete "The average" to "net" and substitute: "The average main line goods train in war-time may be taken as carrying at least 500 tons net."

Add after para. 5: "The following regulations regarding maximum speeds applied in 1929, and although, as indicated in the preceding paragraphs, improvements to track and rolling stock since then may have allowed for higher speeds for certain classes of train, the basic principles can be taken as still applicable:

	Main line m.p.h.	Subsidiary m.p.h.
(a) Passenger Trains		
(i) Without automatic brakes:		
Composed of Goods stock with 1 brake	31	22
Mixed stock for gradients not steeper than 1/100	18.5	18.5
Mixed stock for gradients steeper than 1/100	12.5	12.5
For gradients steeper than 1/50 and for more than 1 km., trains must stop at summit and thence after every km.		
(ii) With automatic brakes:	62.6*	22.0
When lines and stock are suitably equipped		31.0
When lines and stock are suitably equipped and passed by inspecting authority		34.0
(b) Goods Trains	31.3	22.0
With air brakes	40.5*	
(c) Works Trains	28.0	
(d) Light engines (unless otherwise ordered)	31.3	
Light engines tender first	26.0	
(e) Filling Gradients		
1,1000	68.3	
1,200	65.0	
1,100	56.0	
1,40	35.0	31.0
1,25	—	12.5
(f) Carriage limits		
1,200 m.	72.0	
700 m.	56.0	
500 m.	50.0	
300 m.	40.5	
200 m.	31.3	31.0
180 m.	28.0	23.0
160 m.	—	12.5

Other general speed restrictions are as follows:
18.5 m.p.h. for all trains on subsidiary lines,
and for goods and military trains on main
lines.

28.0 m.p.h. for stopping and passenger trains,
rail motors and light engines on main lines.
15.5 m.p.h. when propelling on main lines.
10 m.p.h. when propelling on branch lines
and all crossings are not protected.

Trains hauled in rear must not exceed 37.5
m.p.h. and if the automatic brakes fail and the
train is worked by hand brake, 31.3 m.p.h. may
not be exceeded on main lines, or 22 m.p.h. by
goods trains on subsidiary lines."

Page 11

For revised list of Marshalling Yards see C/317A,
p. 20, Table 3.

12. VULNERABILITY OF SYSTEM

Add after para. 1:

"The density of the railway network is not so
apparent as one proceeds E. and S., where, al-
though alternative routes still apply, the use of
them entails considerably greater train kilometrage
than obtains on the direct routes, and the cutting
of lines at selected junction points can cause con-
siderable inconvenience in maintaining communi-
cations to France, Austria, and Italy.

Key junctions are given in the preamble to each
line description and in the case of the supple-
mentary routes are indicated, together with other
particularly vulnerable points, by an asterisk in
the text."

Page 24

**12c. ELECTRIC RAILWAY POWER STA-
TIONS AND INSTALLATIONS**

Add: "The power stations serving the supple-
mentary lines are referred to in Section 7."

**12d. TRAFFIC CENTRES AND MARSHAL-
LING YARDS**

Add: "A revised list of Marshalling Yards is given
in C/317A, p. 20, Table 3."

14. ITINERARIES

List of Abbreviations.

Add mg = maximum gradient

mr. = minimum radius of curves "

Last line, delete "beginning" and substitute "end,"
and add: "a map indicating all routes described,
including supplementary routes, is given as
Plan 1 of C/317A."

Add the following paragraph: "Map sheets of
G.S.G.S. series 4081 and 4416 have been used
in line descriptions."

After Section 14, add the following:

"(15) MOUNTAIN RAILWAYS

The railways in S.W. Germany run through the
mountainous regions of Bavaria, Wurtemberg and
Baden, so that many steep gradients are encoun-
tered. Gradients are as much as 1/25 on the
electrified line between Bad Reichenhall and
Berchtesgaden (see Route 109), 1/40 at Neuenmarkt
(Route 107), and also on the Munich-Berlin main
line, between Hochstadt and Probstzella (see also
Route 107), 1/45 on the Geislingen gradient (Route
25), and 1/40 between Schweinfurt and Erfurt
(Route 100), all of which are routes for main line
services.

In addition there are local lines serving the
mountainous districts where, although speeds are
not very moderate, important through trains
are frequently carried and a few have been

necessary for the line to make considerable detours
to avoid prohibitive gradients. An outstanding
example is to be found on Route 112a between
Weizen and Blumberg, where the distance as the
crow flies is only c. 10 km., and the line makes a
detour of 25.5 km.

On the Black Forest Railway (Route 112), in
spite of its 1/50 gradients, it is necessary for the
line to cross the central range by a double spiral
and a helical tunnel between Hornberg and Nuss-
bach, to make good the difference in altitude of
300 m.

The Murgtalbahn, branch of the Black Forest
railway, has a maximum gradient of 1/20 between
Hausach and Freudenstadt, and the 0-10-0T
locomotives employed on this line can haul only
3 or 4 four-wheeled vehicles.

Endeavours have been made to improve servi-
ces on mountain lines by the introduction of appro-
priately designed locomotives for fast trains, and
as a result the 4-8-4 type has been brought into
operation, designed for a speed of 140 km. (87
m.p.h.). In addition, the dead weight of rolling
stock has been considerably reduced on those lines.

The 2-10-2 tank locomotives, used *inter alia* on
the Hollenthal Railway, enable high speeds to be
maintained on lines of heavy gradients and sharp
curves, and can be operated over curves of 100 m.
(5 chains) radius. The flexibility is obtained by the
use of Luttermöller axles or Schwartzkopff-
Eckhardt trucks. An example of a 2-10-2T Class
locomotive is given in photograph 32.

(a) RACK RAILWAYS

(i) The Baden-Hollenthal railway was origin-
ally constructed for rack working over the steepest
gradients, but the introduction of the 2-10-2 tank
locomotives and electric traction has enabled the
rack system to be abandoned.

Gradients on the adhesion section reach as much
as 1/40, and the minimum radius of curves is
300 m. (15 chains), whilst on the old rack sections,
which may have been improved upon electrifica-
tion, the figures were 1/18, and 260 m. (13 chains)
radius respectively.

(ii) The Ilmenau-Schleusingen (Thuringer-
wald) Railway, a local line with connection to
Route 101a, comprises 30 km. of standard gauge
adhesion railway and 5 sections, a total length of
6,240 m., of Abt rack railway, with maximum
gradients of 1/40 and 1/17 respectively, and curves
of 250 m. and 200 m. radius.

(iii) The Bavarian Wegscheid Line, between
Erlau (near Passau) and Wegscheid has 1,610 m.
(1 mile) of rack railway in 2 sections.

(iv) The Reutlingen-Schelklingen line con-
necting Routes 115 and 116 has, between Honau
and Lichtenstein, a rack section of 1,990 m. (1.24
miles), and speeds are restricted to 10 km. per
hour both up and down.

In addition there are 2 rack railways constructed
purely for tourist traffic, one between Stuttgart
and Degerlock, and the other from Braunenberg
(Route 123) to Wendelstein. The latter climbs
from 472 to 1,790 m. (1,548 ft. to 5,873) above
sea level.

Photograph 33 gives leading dimensions of
German rack locomotives.

AERIAL CABLEWAYS

In both Germany and Austria cableways have
been developed for passenger traffic, although the
earliest were constructed for goods only.

The general principle is that vehicles are sus-
pended on a carrier cable and drawn up by a
traction cable. High speeds are attained, that

of the Kreuzschnabel and Wankbahn near Paternkirchen, Route 122) and the Predigerbahn (near Bad Reichenhals) (see photographs 13-14) being 5 m. per second. The Zugspitze, the highest peak in the Bavarian Alps, is served by two cableways (telpher lines), one from the German side and one from the Austrian. The German includes a one-metre gauge adhesion railway from Garmisch to Grainau (5.8 km.), with gradients of 1/27, and a rack section thence to Schneefernerhaus, with gradients of 1/4 and a 4,45 m. tunnel.

The Nebelhornbahn, which runs from Oberstdorf in the Kempten area, climbs from 843 m. to 2,969 m. above sea level, and is one of the longest in the world.

Photograph 34 illustrates profiles of certain German telpher lines.

The Austrian cableways, of which there are twelve, have a total length of 30 km. (18.6 miles), and a total height of 11,050 m. (over 11½ miles), and in normal times carry about a million passengers yearly. Most are built on the Zuegg system which gives a long distance between supports, and by the use of high-tension cables enables high speeds to be attained. Speeds are up to 4.5 m. (14½ ft.) per second, and as a rule double lines are provided, allowing two vehicles to be employed, one ascending and one descending. Installations are provided in some cases enabling additional vehicles to be attached or detached as required.

The most recently constructed is the Galzig line, opened in 1937. The length is 2,600 m. (2,843 yds.) rising through 77 m. (842 yds.). The cables have a tensile strength of 200 kg. per sq. mm. (127 tons per sq. in.) and the factor of safety of load to initial tension is 3.5 for the carrier and 4.5 for the traction cable. The cable is 37 mm. (2½ in.) in diameter, and speed reaches 6 m. (19.7 ft.) per second, the journey occupying 7½ minutes. The cars carry 30 passengers each and the hourly capacity is 200 passengers in each direction, the greatest capacity of all Austrian lines.

The high degree of safety experienced on all the Austrian cableways has led to the elimination of safety-catch devices, allowing for higher speeds.

Photographs 20 and 21 indicate the location and altitudes of the Austrian cableways and photographs 15-17 illustrate specific examples.

FUNICULAR RAILWAYS

There are two funicular railways in the Innsbruck area, the Nordkette and Hungerburg lines, illustrations of which are given in Photographs 18-19.

Page 25

Route 51. In list of MY add "Apach (Moselle)" and "Konz-Karthaus."

0 km.

Apach. Under details and facilities add "MY—E. of station—group of LS average length 850 m."

Page 26

39.9 km.

After "long" add "line continues 4 track."

40.2 km.

Delete "c. 200 m. long" and substitute "4 parallel ST bridges, each c. 106 m. long and 4 spans."

40.3 km.

41.3 km.

Delete "Bridge over Moselle c. 300 m. long, 3 spans" and substitute:

"Bridge over Moselle, c. 7 spans, total length c. 100 m."

40.9 km.

Delete "Flyover" and substitute "Railway over-bridge," and in details column add "2 parallel ST bridges."

42.7 km.

KARSTHAUS. Delete "SER" to "Tb1," and substitute:

"Loco Depot. E. of J for Ehrang line. ES (½ RH) capacity c. 30 locos. Tb1 (20 m.). W. Small ES (RH), probably for tank locomotives for yard working."

725 for goods wagons, S. of Loco. Depot.

MI N. of Loco. Depot, c. 20 LS c. 500 m. long.

Passenger Station, N. of MY, 3 island platforms.

Goods Yard, SER.

For diagram of Konz-Karthaus see Plan 29."

49.5 km.

TAIRA. Under facilities delete "ES (small RH)" and substitute "ES (rectangular) combined with RpS, Tb1. W. For location diagram of Trier see Plan 30."

Delete "J facing right with ST s.o. line to Bullay" and substitute:

"Trier (Moseltalbahn). W. of line and N. of Trier Hbf—terminus station for ST standard gauge light railway to Bullay—distance to Bullay 102.0 km."

52.0 km.

Insert "J facing right with ST s.o. line to Turkismühle."

52.1 km.

Under Engineering Works, insert "Bridge over railway," and under details "Line passes over ST light railway to Bullay."

Page 27

55.7 km.

EHFRANG. Add "for location diagram see Plan 30." Delete "2 ES (medium) RH? removed," and substitute "1 ES RH, capacity 20-25, 1 Tb1 (c. 20 m.)—a further Tb1 lies S. of engine shed, the engine shed connected therewith having apparently been removed; radial tracks remain."

Page 29

159.9 km.

Koblenz (Moselle). After "ES (large) RH" insert "c. 50 locos."

161.1 km.

After "Koblenz" add "(Hbf)." After "ES (small) RH" insert "c. 15-20 locos." Add "For location diagram see Plan 30 and for air photograph, Appendix 11."

Page 30

0 km.

Koblenz. Delete "MY" to "ES" and substitute: "Passenger Station, 3 platforms (island)."

Goods Station. S. of passenger station—small group of DES. SR.

Loco. Depot. S. of goods station, ES RH, capacity 15-20. Tb1. W. See also Route 51 Koblenz (Moselle).

MI at Koblenz (Lautzel) and F. Koblenz (Moselle) see Route 51.

See Location Diagram, Plan 30."

Page 32

116.7 km.

Frankfurt-Griesheim m. Insert in details column "ES (rectangular), c. 160 m. x 100 m., served by c. 12 through tracks."

Between 117.4 and 118.0 insert under Engineering Works "Railway overbridge, carrying DT connection from MY and Frankfurt Hbf."

121.2 km.

After "Route 53" add "See Appendix 17 and Plan 26."

Page 33

General Details. Insert under MY "Koblenz (Moselle) and Koblenz (Lutzel)" and under Engine Sheds "Koblenz Hbf, Koblenz (Lutzel), Koblenz (Moselle)."

0 km.

Koblenz Hbf. Insert in details column "Locomotive Sheds at Koblenz Hbf, Koblenz Moselle, and Koblenz Lutzel, also MY at Moselle and Lutzel—see Route 51."

For location diagram of Koblenz see Plan 30."

Page 34

4.6 km.

Niederlahnstein. Delete "10-3" and substitute "10-15."

6.5 km.

Oberlahnstein. Delete "20-3" and substitute "20-25."

34.2 km.

St. Goarshausen. Delete "J (facing) left, light railway to Nastätten" and substitute "I with 1 m. gauge light railway to Nastätten (16.9 km.) and Zollhaus (44.3 km.)."

58.4 km.

Delete "Rack and pinion railway to Niederwald."

63.1 km.

Rüdesheim. Insert under facilities "I with rack and pinion railway to Niederwald."

63.9 km.

64.9 km.

Delete all four lines in details column and substitute:

"J (triangular) right with DT line to Kreuznach (Route 59)."

Page 35

96.2 km.

After Zollhaus add "and Wiesbaden W. and Hbf."

93.3 km.

Wiesbaden Hbf. Add "for location diagram of Wiesbaden see Plan 43."

96.8 km.

After MY add "J trailing right with show from Wiesbaden—Biebrich-Rhein Station."

98.3 km.

Under Engineering Works insert "2 railway overbridges." After "Hochst line" in details column insert "J trailing right with ST connection from Wiesbaden Hbf—Mainz line."

100.1 km.

Mainz-Kastel. Under facilities insert "FS, RH, TBL, W."

102.4 km.

After Biebrichheim insert "Line runs 4-track, followed by J facing right to Biebrichheim."

102.1 km.

Substitute for "Bridge under Mainz line," "Railway overbridge," and insert under facilities "Line passes under connection from Biebrichheim."

102.1 km.

Delete "Hochheim" and substitute "Hochheim."

Page 36

130.7 km.

Delete "J (facing)" to "(8.5 km.)" and substitute "J (triangular) left with ST s.o. line to Frankfurt Rodelheim and Kronberg; distance to Kronberg from Frankfurt Hbf—16.1 km.; also facing connection left to main goods station."

134.5 km.

FRANKFURT (MAIN). Delete "SER" to "TbIs" and substitute:

"Passenger Station. One of the few 'terminus' stations in Germany. 13 platforms (covered) c. 400 m. long."

Loco. Depot. W. of station. ES rectangular. 2 TbIs (25 m.). W."

Main Goods Station. SER Wb (511) Cr (251) 1 large goods shed served by 10 DE tracks. 12 DES (c. 800), 6 with road access."

Loco. Depot. W. of goods yard—2 ES, 1 RH type (total capacity c. 50), W. A further Tbl was reported to be under construction in October, 1943."

RpS. (Passenger and Goods Rolling Stock.) Total employed 2,300—served by c. 20 DE tracks."

MY. Capacity 2,700 per 24 hours:

Reception Sidings: 8 LS (c. 600 m. each).

Sorting Sidings: 22 LS (c. 700 m. each).

Storage Sidings: 7 DES (c. 700 m. each).

FRANKFURT NIED (Route 52). RpS. Loco.

FRANKFURT Griesheim (Route 52). ES, rectangular, served by c. 12 through sidings, and measuring c. 160 m. x 100 m."

FRANKFURT OST (Route 86). MY, capacity 2,800, and Loco. Depot."

For location diagram see Plan 26, and annotated air photographs, Plan 26a and 26b."

Page 37

0 km.

KOBLENZ. After "SR" insert "For location diagram see Plan 30."

Page 39

63.6 km.

GAUJESHEIM. Delete "J (trailing) right" to "line" and substitute "69.3. J trailing right with DT s.o. line from Bad Munster (Route 60)."

Insert kilometrage for bridge over stream—"70.1 km."

70.3 km.

GAUJESHEIM. Under facilities insert "J for Rb—ST s.o. line from Bad Munster and Saarbrücken."

72.3 km.

Flörsheim. Delete "Dead end" to "(21.5 km.)" and substitute "Line passes under ST s.o. line from Flörsheim Rbf to Jüngerheim line."

91.7 km.

MAINZ (Main Station). Under facilities add:
"Passenger Station. 3 platforms (2 island) c. 300 m. long, 6 through tracks."

Goods Yard. c. 12 DES each 200 m. long, 18 with road access. Large goods shed c. 300 m. long.

W. of shed small group of c. 10 LS up to 300 m. long.

Shunt Yard. N. of goods yard c. 16 LS c. 500 m. long.

93.7 km.

MAINZ Süd. Insert "Passenger Station, with 2 platforms c. 300 m. long (one island), served by 4 through tracks. For location diagram of Mainz see Plan 43."

Page 40

127.6 km. to read 126.1 km.

79½ miles to read 78½.

129.2 km.

FRANKFURT (Main). For details of facilities see Amendments for Route 53.

Page 42

0.6 km.

Bridge over R. Sauer. Add under details "4 spans, masonry construction."

10.3 km.

TRIER (West). Add "RpS, carriage and wagon, S. of station W. of line—equipped with traverser; for diagram see Plan 40—total employed including staff at Konz Karthaus and Trier Loco. RpS, 1792."

Delete reference to RpS, goods and passenger stock on Page 26 Trier Hbf.

Page 43

15.9 km.

EHRANG. Delete "2 ES medium RH: but 2 removed" and substitute "1 ES, RH, capacity 20-25, 1 Tbl (c. 20 m.); a further Tbl with radial tracks lies S. of existing ES, but the "H" in connection therewith has apparently been removed."

For location diagram see Plan 40."

Page 44

0 km.

TRIER. Reference RpS, delete "passenger and goods" and add "RpS, carriage and wagon, at Trier W., equipped with traverser; for diagram see Plan 40, for location diagram of Trier see Plan 40."

Delete "DT line N. to EHRANG" to "EHRANG" and substitute "J for DT line from Apach-Ehrang-Koblenz (see Route 51), also ST line to Hermeskeil and Turkismühle. Separate station (Moseltalbahn) W. of line and N. of Hbf, for ST standard gauge light railway to Bullay."

11.7 m.

TRIER (Süd). Delete "Restricted Goods facilities" and substitute "Passenger station only, 2 platforms (island)."

Page 45

6.7 km.

KARTHANS. See Amendments for Route 51.

Page 46

83.3 km.

After "Circle (3 km.)" add "also connection to RpS (Goods wagon)."

85.8 km.

SAARBRÜCKEN-BARBACH. Under facilities add:

"Passenger Station. 2 platforms (1 island) c. 330 m.

Shunt Yard. N. of station c. 16 LS 350-400 m.

RpS. (Carriage and Wagon). N. of station served by ST line at 85.3 km., fitted with traverser and machinery for heavy repairs—total employed normally 3,000."

87.2 km.

After "Remelach" add "(Route 52)."

87.8 km.

After "Neunkirchen" add "(Route 63)."

88.3 km.

SAARBRÜCKEN (Hbf). Delete "SER" to "destroyed" and substitute:

"Passenger Station. 5 platforms (4 island).

Loco. Depot. N. of station.

RpS (Loco). N. of passenger station—total employed c. 1,200. Tbl (c. 23 m.) W.

Small RH at W. end probably for tank locomotives, capacity c. 15 locos.

RpS (Carriage and Wagon). N. of Burbach Station, served by ST connection from main line at 85.3 km.

MT. Hump type on main line to Neunkirchen (Route 59).

c. 30 LS for marshalling, c. 700 m. long, also c. 20 LS for reception and departure. Capacity c. 2,500 wagons per 24 hours.

Loco. Depot at MT. ES, rectangular capacity, c. 50 locomotives. Tbl (23 m.) W.

Shunt Yard at Schleifmühle (Route 63). 10 LS c. 300-600 m. long, also ES (RH) capacity c. 15 locos. Tbl (c. 18 m.) W.

Goods Station. SE of passenger station. SER. Wh. (40 tons). Cr (20 tons).

Small group of c. 8 LS c. 370-400 m. long.

N.B. Owing to the heavy bombing suffered at Saarbrücken the capacities of the various installations are probably greatly reduced.

For location diagram of Saarbrücken see Plan No. 37."

Page 48

For details of facilities at Saarbrücken see Amendments to Route 56.

Page 54

Under Engine Sheds insert "HARGARTEN."

0 km.

HARGARTEN. Insert the following under details and facilities:

"Continuation of DT main line from Metz and Paris. Frontier Station.

SER. Wh. Cr.

Loco. Depot. In junction triangle formed by Hargarten-Beningen, and Hargarten-Völklingen lines.

ES. (RH) holding capacity c. 24 locos; maintenance capacity 75-100 locos; 24 roads.

Tbl (20 m. diameter) W.

Small workshops attached with fitting shop.

Mechanical coating plant.

J for lines E. to Saargemünd, W. to Luxembourg and S. to Metz and Paris."

Page 55

Under ES add "St. WENDEL—RpS locn."

0 km.

BENNINGEN. Under facilities add "W. Through industrial sidings (800 m. long) serving MARLBACH coal mines N. of station."

Page 56

16.9 km.

For details of facilities at SAARBRÜCKEN see Amendments for Route 55.

Page 57

38.2 km.

NEUNKIRCHEN. After "RH" insert "capacity 45-50 locos."

66.5 km.

After "Nonweiler" insert "(Route 57)."

For location diagram of MANNHEIM see Plan 31, and for further details of facilities see Route 55.

Page 74

SAARGEMÜND. After "RH" insert:

"Total holding capacity of ES = 60.

Tbl 2 x c. 14 m., and 2 x c. 24 m."

Delete "2 Tbl."

Storage Sidings. Delete "10-15 short DES" and substitute "10-15 short LS."

Page 75

ZWIMMÜCKEN. Delete "3 platforms" to "facilities" and substitute:

"Passenger Station.

3 platforms (2 island)—3 through tracks.

Shunt Yard (S. of station). 10 LS c. 500-747 m.

Loco. Depot. E. end of Shunt Yard.

ES, RH, holding capacity 11 locos.

Tbl (20 m.), small workshops attached.

6 DES c. 150 m. long.

6 roads through to shed, serving also coal stage, with additional Tbl (16 m.) at W. end of stage.

3 water towers, capacity 12 m.³.

Goods Yard. N. of station. Wb 35 tons, Cr 7 tons,

6 LS adjoining main line (377, 371, 264, 151, 173, and 174 m.), 1 with road access 100 m. of length, and 1 with road access for 100 m. of length."

2 storage sidings 310 and 477 m. serving SR (232 m.), with road access 232 m. 2 ER."

Page 76

LANDAU. Main Station. Delete "Wb (40 tons)" to "ES" and substitute:

"Passenger Station. 3 through roads.

Goods Station left of line. SR (333 m.), ER.

Military platform 324 m., Cr (5 tons), Cr (2 tons), Wb (40 tons).

2 LS (131 and 147 m.) with 1 DES (137 m.).

2 LS (261 and 340 m.), the latter serving goods stage and with road access 333 m. of length. 1 LS

360 m. with road access, 1 LS (718 m.) serving military platform (324 m.), 2 DES (380 and 390 m.).

Shunt Yard. Right of line.

4 stabling sidings (573, 639, 581, and 559 m.).

17 shunting sidings total length 4,240 m.

Loco. Depot. S. end of shunt yard.

ES, RH, capacity 47 locos.

Tbl (20 m.). Water tower 60 m.³ feeding at rate of 25 m.³ per hour."

GERMERSHEIM. Delete "Wb (33 tons)" to "SER" and substitute:

"Passenger Station. 4 through lines.

Right of line.

Loco. Depot.

ES (rectangular?) with 4 roads.

Tbl (20 m.).

W. tower capacity 60 m.³

Stabling Sidings.

9 LS, 757, 759, 761, 705, 714, 661, 720, 417, 276 m.

Shunting Sidings.

6 LS 352, 356, 457, 501, 2 x 250 m.

Wb (35 tons), Cr (5 tons).

Left of Line.

1 stabling siding 227 m., and 1 LS 464 m., the latter serving goods stage (SER) 200 m. long and having 140 m. of length with road access.

Tbl (16 m.). W tower 25 m.

KARLSRUHE W. Delete "Passenger station only" and substitute:

"Passenger Station. 2 platforms.

N. of station 3 LS c. 700 m.

Goods Station.

"3 LS c. 400 m. long serving shed.

2 DES c. 300 m.

2 DES c. 300 m. with connection to works N. of station.

See Plan 44."

Delete "ES (N. of station), RH, Tbl."

Page 77

WÖRTIL. Add "For details see p. 88."

KARLSRUHE Main Station. Add "For location diagram of Karlsruhe see Plan 44, and annotated air photograph Plan 44a. For details of facilities see Route 67."

Page 77

KARLSRUHE (Main Station). Delete "Restricted" to "Tbl. W" and substitute:

"Passenger Station.

9 platforms (island) c. 300 m. long.

c. 9 through tracks.

3 bay platforms c. 300 m. long, served by 6 DE tracks.

Carriage Sidings. E. of passenger station 13 LS c. 120 m.-360 m. A further group exists S.W. of station, adjoining loco. depot, comprising c. 11 LS (250 m.) and 5 LS (150 m.) serving carriage shed.

Loco. Depot. Between J triangle of Routes 66 and 75, ES rectangular c. 100 x 70 m. 12 roads, 2 Tbl (c. 25 m.). A group of c. 8 LS (150-300 m.) for coaling purposes, connected at E. end to Tbl.

Goods Station. SER. Wb (40 tons) S. of passenger station—on long platform c. 300 m. long served by 2 through tracks. 3 LS (130-220 m.) S. of platform with c. 12 short spurs off one, serving large goods stage (herring-bone design), 400 m. x 30 m., giving facilities for side and end loading. Each uncovered bay accommodates an average of 2 wagons, whilst covered bays at W. end probably accommodate more.

M. E. of passenger station. Wb (60 tons), Cr (20 tons), S. of line. Capacity 3,300 wagons per 24 hours, served by 4 tracks from W. end and 2 tracks from E. end.

Reception Sidings. 6 LS c. 800-1,000 m. each. 4 LS c. 600 m. long.

Main Marshalling Sidings. 16 LS 530-600 m. with 3 shunting necks at W. end c. 1,000 m. long.

Coaling Sidings. S. of marshalling sidings 16 LS c. 450 m. long.

Depot Sidings. N. of loco. depot (in MY) c. 3 LS c. 310 m. long; c. 8 LS c. 350 m.-600 m. long.

2 *Repair Shops.* N. of yard, each served by 1 LS c. 350 m. with a further group of

Departure or Reception Sidings between each shed and 675 m. long.

Loco. Depot. ES rectangular c. 100 x 30 m. with c. 4 through roads and Tbl (20 m.).

Storage Sidings for carriage and wagon shops at P. end of MY c. 12 LS 200-400 m. long.

Repair Shops.

Carriage and wagon. N.E. of passenger station and with connections from E. end of MY—equipped to deal with heavy and light repairs. Traveller.

ES RH—probably only for tank locomotives.

Total normally employed 2,800.

Locomotives (tenders only) at Durlach shops, situated S.E. of MY and with connections from E. end of yard, also connections to carriage and wagon shops.

Total normally employed c. 1,000, including staff at Offenburger shops.

Karlsruhe Main Goods Depot. Situated N. of carriage and wagon shops. SER, Wb (40 tons), Cr (20 tons), access by trailing connections from Karlsruhe-Bretten line. Holding sidings c. 6 LS (c. 250 m.) E. end of yard, and c. 6 LS (c. 250 m.) end of warehouse. 2 small yards for direct loading and unloading, 1 E. of warehouse N. of line comprises c. 4 LS (2 x 270, 2 x 320 m.), the other S. of warehouse c. 6 DES 250-350 m.

3 goods sheds, the largest measuring 250 x 25 m.

Permanent Wagon Stores Depot. Served by connections from Karlsruhe-Bretten line (Route 75) at E. end, and from loop connection to main goods station at each end. Total area c. 40,000 sq. m., c. 7 DES and 4 LS (c. 200-300 m. long) serving open storage bays.

KARLSRUHE-ALTALB. Terminus station for local electric line to HERRENALB—situated N.W. of main passenger station.

For location diagram and annotated air photographs of Karlsruhe see Plans 44-44d."

 11 Sorting Sidings.
 19 Departure Roads.
 15 Storage Roads.
 11 Sidings for private siding traffic.

Repair Shops serving MY. Locomotives and Carriage and Wagon—total employed, including staff at Augsburg, 3,700.

Loco. Depot at MY.

2 ES, RH, holding capacity c. 70-60 m.

2 Tbl. W.

Loco. Depot and Carriage Works at Rothenburgerstrasse.

2 ES, KH. 2 Tbl. W.

Capacity of sheds c. 50 locos.

Junction for lines to Hof (Route 101).

ELER (Route 102), Fürth (Route 103).

REGENSBURG and Passau (Route 104).

Also, Route 90 to Würzburg, and Route 74 to Bretten and Karlsruhe.

For location diagram of NÜRNBERG see Plan 34 and for further details see Route 101."

09 km.

After Bamberg add "(Route 101)."

Page 130

580 km.
 GRÖNHART. Add under facilities, "Electric transformer station." Under Vulnerable Points, p. 129, add "(d) Electric transformer station at Grönhart."

Page 131

906 km.
 J, etc. After "Neumarkt" add "distance 682 km."

1154 km.

Insert:

"Bridge over Danube c. 225 m. long river gap c. 100 m."

1176 km.

Ingolstadt. Add "For details of facilities at Ingolstadt, see Route 105."

1188 km.

After "Regensburg" add "(Route 104)," and after "Augsburg" add "(Route 89)."

Page 132

1431 km.
 J trailing, etc. (2). Add "Distance to Langenbach from Weinzach 119 km."

Page 133

1020 km.
 J, etc. After "Regensburg" add "(Route 104)."

1034 km.

J, etc. (2). After "Büchloe" add "(Route 111)."
 p. After "Paring" add "Partenkirchen and Imbabach (Route 112)."

1044 km.

J, etc. A 11 (Route 111)."

1044 km.

MY. S. A. M. "For detailed description of facilities see Plan 34 and for further details see Route 101."

Page 134

0 km.

AUGSBURG. Add "For detailed description of facilities see p. 116 amended."

J facing, etc. BÜCHLOE. Add "(Route 120)."

5.9 km.

AUGSBURG-HOCHZOLL. See note on Amendment for p. 116.

J, etc. München. Add "(Route 82)."

Page 135

64.8 km.

J, etc. After "Regensburg-Prüfening" add "(Route 105)."

Page 136

General Details—Traction. Delete "Probably."

1.3 km.

J, etc. After "Treuchtlingen" add "(Route 85)."

Page 138

0 km.

WÜRZBURG. Add "For location diagram see Plan 42."

9.2 km.

J, etc. After "Schweinfurt" add "(Route 100)."

18.6 km.

J (trailing) left with ST s.o. line to Schweinfurt add "distance 49.9 km." Insert kilometrage "22.4 km."

Page 139

61.3 km.

J, etc. For "Forchheim" substitute "Demant-fürth-Uhlfeld."

Add "DE Line—distance from Neustadt 15.4 km."

93.0 km.

J, etc. (2) After Bamberg insert "(Route 101)."

Page 140

97.2 km.

Amend "Bridge over railway" to read: "Railway overbridge" and details to "Line passes under ST connections from Nürnberg-Nord to Dora, and also Nürnberg-Nord to MY."

102.0 km.

NÜRNBERG. Add "For detailed description of facilities see Route 101, and for location diagram Plan 34."

GRADIENTS AND CURVATURE

Insert the following details regarding gradients and curves to the lines in the HOMBURG (SAAR)-LUDWIGSHAFEN Area:

Route No.	Page	Max. gradient for miles	Min. radius of curves in metres	Section
60	60	5.5 10.0	340 300	HOMBURG-HOCHSPEYER HOCHSPEYER-BAD MÜNSTER
62	65	10.0	300	SCHÖNENBERG-GLAN- MÜNCHWEILER, curves frequent
64	70	13.3	200	frequent
65	71	10.0	300	HOCHSPEYER-FRANKEN- STEIN
			400	LUDWIGSHAFEN- MANNHEIM frequent
66	74	7.6	300	WILGARTSWIESEN- REINTHAL frequent
71	87	7.6	300	MAIKAMPFER-KIRCH- WEILER-NEUSTADT frequent
72	89	5.0	Nil	WENDEN-SCHLAIDT- STEINFELD.

126	S. Carol. Fr. Immenhof-Spital Millstättersee	16	200-250

ROUTE 98
MAINZ-WORMS-LUDWIGSHAFEN

General Description

Connecting at Mainz with *Routes 53 and 54*, and at Ludwigshafen with *Route 63 and 69*, this line normally provides the most important route for trains from the N (Ruhr) Area to Karlsruhe and the S. Owing, however, to the destruction caused by bombing, traffic between the Ruhr and the area S of Karlsruhe is reported to have been diverted via Winden-Neustadt-Kaiserslautern. Other important junctions are at Mainz with lines E to Frankfurt and Darmstadt (*Routes 54 and 93*), at Worms with *Route 94* from Langmeil, Kaiserslautern, and the Saar to Darmstadt, Frankfurt, and the NE, whilst at Ludwigshafen, *Routes 63 and 99* provide the main W to E cross country route (Saar region to Würzburg, Nürnberg and Schweinfurt).

The line follows the left bank of the Rhine and gradients will not be severe.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 67.3 km. (41½ miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 12½ per mille (1 in 80).
6. MINIMUM RADIUS OF CURVES: 350 m.

7. TRACTION: Steam.**8. MAXIMUM DISTANCE BETWEEN STATIONS:**
8.3 km. (5 miles).**9. ENGINE SHEDS:**

Mainz Hbf.	Ludwigshafen.
Worms.	Frankenthal.

10. MARSHALLING FACILITIES:

Mainz Bischofsheim.	Ludwigshafen.
---------------------	---------------

11. WATERING FACILITIES:

Mainz Hbf.	Worms.
Ludwigshafen (Rhein).	

12. VULNERABLE POINTS: Marked with asterisk in text.

- (a) Locomotive and marshalling facilities at Ludwigshafen, Worms and Mainz.
- (b) Tunnel at 0.9 km.
- (c) Junctions at Mainz, Worms and Ludwigshafen.

13. CAPACITY:

<i>Trains per day</i>	<i>Not train load tons</i>
<i>each way</i>	<i>military stores</i>
72	500

ROUTE 92A MAINZ HBF-ALZEY-MONSHEIM

General Description

Although ST, except where it runs in common with the Bingerbrück-Mannheim line, this line has proved important as an alternative route for traffic from Mainz, Worms and Neustadt, upon the dislocation of the main lines as a result of air attacks.

Gradients have a general tendency to rise rather steeply between Mainz and Alzey, and fall from Alzey to Monsheim.

Principal junctions are at Mainz for the main lines to Koblenz, Wiesbaden and Frankfurt (*Route 54*)—at Armsheim and Alzey for the ST line Mannheim to Bingerbrück and at Monsheim with the main line Kaiserlautern to Worms, Darmstadt and Frankfurt (*Route 94*).

Engineering works are not considerable although several minor rivers and streams are crossed en route.

General Details

- GAUGE: 1,435 mm. (4 ft. 8½ in). Standard.
- LENGTH: 59.7 km. (37 miles).
- TRACK:
 - Mainz-Armsheim, single.
 - Armsheim-Alzey, double.
 - Alzey-Monsheim, single.
- MAXIMUM PERMISSIBLE AXLE LOAD:
 - Mainz-Armsheim, 20 metric tons.
 - Armsheim-Alzey, 16 metric tons.
 - Alzey-Monsheim, 17 metric tons.

- MAXIMUM GRADIENT: 12½ per mille (1 in 80).
- MINIMUM RADIUS OF CURVES: 300 m.
- TRACTION: Steam.
- MAXIMUM DISTANCE BETWEEN STATIONS:
 - 6 km. (3½ miles).
 - Wörstadt, 27.5 km.—Armsheim, 33.5 km.
- ENGINE SHEDS:
 - Mainz.
 - Bischofsheim.
 - Alzey.
- MARSHALLING FACILITIES:
 - Mainz.
 - Bischofsheim.
- WATERING FACILITIES:
 - Mainz.
 - Bischofsheim.
 - Alzey.
- VULNERABLE POINTS: Marked with asterisk in text.
 - (a) Locomotive and marshalling facilities at Mainz and Alzey.
 - (b) Junctions at Mainz, Armsheim, Alzey and Monsheim.
 - (c) Bridges—see description of line.
 - (d) Tunnel at 12.0.
- CAPACITY:

Trains per day each way	Net train load tons military stores
16	400

59.7	MONSHEIM	..	SER. Wb (34 t). Cr (3 t).

ROUTE 93

MAINZ-GROSS GERAU-DARMSTADT-ASCHAFFENBURG

General Description

Connecting with Route 54 at Mainz and with Route 86 at Aschaffenburg, this line provides, together with those routes, the main through service from Köln and the Ruhr area to the SE and Austria via Würzburg, Nürnberg and München.

The most important junctions en route are at Gross Gerau and Darmstadt with Routes 93 and 67 respectively, giving main line connections from the Saar, Karlsruhe and the S.

Gradients, which will not be severe, have a tendency to rise for the first 43.0 km., and thence gradually fall towards Aschaffenburg.

The most important bridges occur at 3.1 km., where the line crosses the Rhine, and at 66.5 km. over the R. Main, but in addition numerous bridges over tributaries are encountered in crossing the valleys of both rivers.

General Details

1. GAUGE: 1,433 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 72.3 km. (45 miles).
3. TRACK: Double
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 14 per mille (1 in 70).
6. MINIMUM RADIUS OF CURVES: 360 m.
7. TRACTION: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS: 8.2 km. (5 miles).

9. ENGINE SHEDS:

ROUTE 93A
DARMSTADT (NORD)-EBERBACH

General Description

This line, although ST, is of some importance in linking *Route 93* and *97* to provide a route for traffic to Stuttgart via Neckarelz and Heilbronn alternative to that provided by the main lines via Mannheim and Heidelberg.

Heavy gradients may be experienced, as the line passes through hilly country, but they are minimized by following the winding course of rivers for the whole way.

Several minor rivers and streams are crossed en route and vulnerability is increased by two long tunnels, one at 30.3 km. (c. 1.1 km. long), and the other at 59.4 km. (c. 2.8 km. long), where the line passes from one valley to another.

In addition to the junctions at Eberbach, an important junction gives connection with the ST line, whilst at Reinheim (19.3 km.) and, less important single track local lines connect with Dieburg and Aschaffenburg respectively.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 81.5 km. (50½ miles).
3. TRACK:
Darmstadt Nord-Darmstadt Ost, double.
Darmstadt Ost-Eberbach, single.

4. MAXIMUM PERMISSIBLE AXLE LOAD:
Darmstadt Nord-Wiebelbach-Heubach,
20 metric tons.
Wiebelbach-Heubach-Eberbach,
16 metric tons.
5. MAXIMUM GRADIENT: 14 per mille (1 in 70).
6. MINIMUM RADIUS OF CURVES: 400 m.
7. TRACTION: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS:
7.4 km. (4½ miles).
9. ENGINE SHEDS: Darmstadt.
10. MARSHALLING FACILITIES:
Darmstadt (Kranichstein).
11. WATERING FACILITIES: Darmstadt.
12. VULNERABLE POINTS: Marked with asterisk in text.
 - (a) Locomotive and marshalling facilities and RpS at Darmstadt—see Route 93.
 - (b) Junctions at Darmstadt, Wiebelbach and Eberbach.
 - (c) Tunnels at 30.3 and 59.4 km.—total length 4,313 m.

ROUTE 94

(KAISERSLAUTERN)-LANOMEIL-WORMS-BIBLIS-GROSS GERAU-FRANKFURT

General Description

Connecting with *Route 60* at Langmeil, this line provides a main line service from the Saar to Frankfurt and beyond.

Important junctions at Worms (with *Route 92*), Goddelau-Erfelden and Gross Geran, give through main line services to Mainz, Darmstadt and Wiesbaden, whilst at Biblis the line is joined by the main line from Mannheim (*Route 95*). Less important, although by no means unimportant, junctions at Mannheim and Monsheim (*Route 92a*) connect with the ST lines to Binger 'rück (*Route 54*) and Mainz.

The line takes a general direction E along the valley of the R. Pfimm to Worms when it turns NE crossing the Rhine at 41.7 km. by a bridge 961 m. long, and the Main at 98.8 km. by a bridge 283 m. long.

Contours are even for most of the route and gradients as well as curvature will be easy.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 100.0 km. (62½ miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.

5. MAXIMUM GRADE: 9 per mille (1 in 110).

6. MINIMUM RADIUS OF CURVES: 352 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS: 9.1 km. (5½ miles).

ROUTE 95
MANHEIM-BIBLIS

General Description

This line, which is DT throughout, connects the important railway centre of Mannheim with the main line from Worms, K. verslautern and Saarbrücken to Darmstadt and Frankfurt at Biblis (Route 94), and together with Route 94, provides a main line service between Mannheim and Frankfurt alternative to that provided by Route 67.

The line follows the right bank of the Rhine through flat country and no heavy gradients or restrictive curvatures are likely to be encountered.

The principal bridges en route are those over the Neckar at 3.8 km., and over the Weschnitz at 26.9 km.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 28 km. (17½ miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 5 per mille (1 in 200).

6. MINIMUM RADIUS OF CURVE: 500 m.
7. TRACTION: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS: 6.3 km (4 miles)
9. ENGINE SHEDS:
Mannheim HtC. Mannheim MY.
10. MARSHALLING FACILITIES: Mannheim.
11. WATERING FACILITIES: Mannheim.
12. VULNERABLE POINTS: Marked with asterisk in text.
(a) Marshalling and locomotive facilities at Mannheim.
(b) Junctions at Mannheim and Biblis.
(c) Bridges at 3.8 km. and 26.9 km.
13. CAPACITY:

<i>Trains per day</i>	<i>Net train load tons</i>
<i>each way</i>	<i>military stores</i>
16	300

ROUTE 7A

FRANKFURT-HANAU-SCHLÜCHTERN-ELM-GEMÜNDEN-WAIGOLSHAUSEN

General Description

This line provides an alternative though devious route from Frankfurt to Gemünden to that provided by Route 86, and from Gemünden to Waigolshausen offers a direct link from the Frankfurt area to Schweinfurt and Bamberg.

From Frankfurt to Schlüchtern the route is part of the main line to Berlin via Fulda, and from Elm to Gemünden, part of the main line from Hamburg and Hanover to München.

The line runs through the Main valley to Hanau, where it turns NE through the Wolfgang Forest and low-lying country to Gelnhausen, to enter the valley of the R. Kinzig which it follows to Schlüchtern.

After leaving Elm, the country becomes more hilly, and several tunnels are encountered before the line runs down the valley of the R. Sinn as far as Gemünden, whence it follows the Main valley to Wernfeld and finally the Wern valley to Waigolshausen.

The most serious gradients and curvatures are likely to be encountered between Elm and Jossa, although curvature will be fairly severe throughout.

Several bridges are crossed, the most important being those over the R. Main and R. Kinzig referred to under item 12 below.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.

2. LENGTH: 168.1 km. (104½ miles).

3. TRACK:

Frankfurt-J at 77.4 km., double.

J at 77.4 km.-Mottgers (18.8 km.), single.

Mottgers-Jossa (9.0 km.), double.

Jossa-J at 126.7 km. (21.5 km.), single.

J at 126.7 km.-J at 131.4 km. (4.7 km.), double.

J at 131.4 km.-J at 167.0 km. (35.6 km.), single.
J at 167.0 km.-Waigolshausen (1.1 km.), double.

4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.

5. MAXIMUM GRADIENT: 13 per mille (1 in 77).

6. MINIMUM RADIUS OF CURVES: 190 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

8.4 km. (5½ miles).

9. ENGINE SHEDS:

Frankfurt (Main and Ost).

Hanau.

Gemünden.

10. MARSHALLING FACILITIES:

Frankfurt (Main and Ost).

Hanau.

11. WATERING FACILITIES:

As in 9 above. No other details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Locomotive and marshalling facilities given in 9 and 10.

(b) Junctions at Frankfurt, Hanau, Gelnhausen, Elm, Gemünden and Waigolshausen.

(c) Bridges at 1.2, 21.3, 30.8, 45.3, 59.1, 62.2, 122.0, 123.5, 124.4 and 127.0 km.

(d) Tunnels at 85.1, 89.8, 94.1, 102.5 and 105.9 km.

13. CAPACITY:

Trains per day Net train load tons
each way military stores

Frankfurt-J at 77.4 km. 72 500

J at 77.4 km.-Waigolshausen 16 400

ROUTE 97

MANNHEIM-HEIDELBERG-NECKARGEMÜND-NECKARETZ-OSTERBURKEN

General Description

Together with Route 99, this forms the main line from Mannheim to Würzburg and NE Germany.

The line runs through flat country to Heidelberg with a gradually rising gradient, but after Heidelberg it enters the hilly region of the Odenwald and more difficult gradients may be expected.

To minimize gradients, the line follows the R. Neckar, involving many curves, bridges over tributaries and several tunnels where bends in the river are too sharp for the line to follow.

An alternative route is provided between Neckargemünd and Neckarelz by a ST line via Meckesheim, junction also for the ST line to Jagstfeld (Route 97a).

The principal junctions are at Heidelberg with the main lines from Bruchsal and Karlsruhe, at Eberbach with the ST line from Darmstadt (Route 93a), at Neckarelz, with the main line from Heilbronn, and at Osterburken with the main line from Jagstfeld, Heilbronn and Stuttgart.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 101.6 km. (63 miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE LOAD:
Mannheim-Eberbach, 20 metric tons.
Eberbach-Seckach, 18 metric tons.
Seckach-Osterburken, 20 metric tons.
5. MAXIMUM GRADIENT: 15 per mille (1 in 66).

6. MINIMUM RADIUS OF CURVES: 300 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:
6.2 km. (3½ miles).

9. ENGINE WHEELS:

Mannheim. Neckarelz.
Heidelberg.

10. MARSHALLING FACILITIES:

Mannheim. Heidelberg.

11. WATERING FACILITIES:

Mannheim. Heidelberg.
Neckarelz.
No other details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Marshalling and locomotive facilities given in 9 and 10 above.

(b) Junctions at Mannheim, Heidelberg, Neckargemünd, Eberbach, Neckarelz and Osterburken.

(c) Bridges at 8.7, 14.1 and 29.0 km.

(d) Tunnels at 18.8, 19.9, 28.8, 41.3, 43.3, 49.4, 63.9, 84.7, 93.7, 94.8 and 98.0 km.

13. CAPACITY:

Trains per day each way	Net train load tons military stores
60-72	500

179.6	WÜRZBURG	..	Line continues to Würzburg as Route 99.

ROUTE 97A

NECKARGEMÜND-MECKESHEIM-BAD FRIEDRICHSHALL-JAGSTFELD

General Description

Although, apart from the stretch from Neckargemünd to Meckesheim which is DT, the line is ST, this route provides the most direct service between Heidelberg and Heilbronn for traffic from the Mannheim area to Stuttgart and South Germany.

The country through which the line passes is rather hilly and, to avoid heavy gradients or the alternative of expensive engineering works, the route follows the course of the R. Elsenz to Steinfurt, where it turns E after crossing the Elsenz, following the valley of the Isen to its source and after climbing the summit between the valleys of the Elsenz and the Neckar descends along the Mühl to its confluence with the Neckar, which it crosses, and joins the main line (Route 99), at Jagstfeld.

Several minor bridges are entailed in crossing tributaries of the Elsenz and that river itself, but the most important bridge is that over the Neckar at 43.7 km.

The principal junctions are at Neckargemünd with Route 97, at Meckesheim (10.5 km.) with the ST line to Neckarelz which involves several tunnels, at Steinfurt with the ST line to Eppingen (Route 74), and at Jagstfeld with the main line Heilbronn-Würzburg (Route 99).

General Details

1. GAGES: 1433 mm (4 ft. 8 1/2 in.). Standard.
2. TONNAGE: 36 t (7 1/2 miles).

3. TRACK:

Neckargemünd-Meckesheim, double.
Meckesheim-Bad Friedrichshall-Jagstfeld, single.

4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.

5. MAXIMUM GRADIENT:

No details but a general tendency to rise to Babstadt.

6. MINIMUM RADII OF CURVES:

No details but will probably be restrictive to speed and wheelbase.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

7 km. (4 1/4 miles).

9. ENGINE SHEDS:

Heidelberg (Route 97).

Heilbronn (Route 99).

11. WATERING FACILITIES:

No other details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Junctions at Neckargemünd, Meckesheim, Steinfurt and Jagstfeld.

(b) Bridges over R. Elsenz at 3.6 km. and 2.4 km., and over R. Neckar at 43.7 km.

13. CAPACITY:

Trains per day Net ton load per
each way mile per day
15 300

ROUTE 98

BRUCHSAL-HEIDELBERG

General Description

Connecting with Route 67a at Bruchsal and Route 97 at Heidelberg, this forms part of the main line from Karlsruhe and the South to Würzburg and North-East Germany.

The route runs through the low-lying country of the Rhine valley, and gradients are not severe.

At Bruchsal, in addition to the connecting line to Karlsruhe (Route 67a), junctions exist with the main line running W to E from Saarbrücken, connecting at Mühlacker with Route 75 (Karlsruhe to Stuttgart and München), whilst at Heidelberg, junctions also give connections E to Mannheim for Kaiserslautern, and to the main S-N lines to Darmstadt and Frankfurt, and Worms and Mainz. These two important railway centres (Bruchsal and Heidelberg) present the most vulnerable points of the route, but in addition, whilst major engineering works are not considerable, numerous small bridges over tributaries of the Rhine increase vulnerability.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 33.1 km. (20½ miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.

5. MAXIMUM GRADIENT: 3 per mille (1 in 200).
6. MINIMUM RADIUS OF CURVES: 450 m.
7. TRACTION: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS: 5.4 km. (3½ miles).
9. ENGINE SHEDS:
(Karlsruhe.) Heidelberg.
Bruchsal.
10. MARSHALLING FACILITIES:
(Karlsruhe.) Heidelberg.
Bruchsal.
11. VULNERABLE POINTS: Marked with asterisk in text.
(a) Locomotive and marshalling facilities at Bruchsal and Heidelberg.
(b) Junctions at Bruchsal and Heidelberg.
(c) Bridges—several small rivers and streams are crossed en route, none of which however are of any great width.
12. CAPACITY:

Trains per day each way	Net train load tons military stores
72	300

ROUTE 99

HEILBRONN-OSTERBURKEN-LAUDA-WÜRZBURG

General Description

Together with Routes 77 and 75, this route forms the main line from Stuttgart to Würzburg and North-East Germany. The line follows an almost continuously winding course from Heilbronn, following in turn the valleys of the rivers Neckar, Jagst, Seckach, Umpfer, Tauber and Moos.

After leaving the Neckar valley at Jagstfeld, it ascends gradually to 200 m. at Zütilingen, and 300 m. at Osterburken, where it joins the main line from Mannheim (Route 97).

The hillside between the end of the Seckach and beginning of the Umpfer valley is pierced by a tunnel (at 64.0 km.). At the end of the Umpfer valley the line descends to 200 m. and enters the wider Tauber valley, leaving it at Gerlachsheim and climbing again to 300 m. along the winding Moos valley. From Zimmern (at 94.5 km.) the ground is more open, though still at the 300 m. level. A second tunnel cuts through the hillside at 99.1 km.

At 121.9 km. (Heidingsheim West) there is a J with the Würzburg-Ansbach line (Route 86), from which point the line descends to the R. Main and crosses it by a bridge c. 100 m. long. At 126.1 km. there is a J with the Würzburg-Bamberg line (Route 100).

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 127.3 km. (79 miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.

WÜRZBURG TO BAMBERG

59

ROUTE 100

WÜRZBURG-SCHWEINFURT-BAMBERG

General Description

The line runs common with Route 90 to the junction at 92 km., where it branches N through the valley of the R. Main to Schweinfurt, whence it closely follows the right bank of the river to Bamberg, junction for the DT electric line Berlin-Nürnberg (Route 101).

Several minor tributaries of the Main are crossed, but the only major bridge is that over the Main at 96.4 km.

The principal junctions are at Würzburg, with the main lines to Nürnberg (Route 90), Ansbach (Route 86), Heidelberg and Stuttgart (Route 99), at Waigolshausen with the branch line from Gemünden (Route 96) which provides an alternative to Routes 86 and 100, at Schweinfurt with the main line from Meiningen, Leipzig and Berlin (Route 100a), and at Bamberg with Route 101.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 100.2 km. (62½ miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 7 per mille (1 in 140).

6. MINIMUM RADIUS OF CURVES: 330 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:
9.4 km. (5½ miles).

9. ENGINE SHEDS:
Würzburg. Schweinfurt.

10. MARSHALLING FACILITIES:
Würzburg. Schweinfurt.

11. WATERING FACILITIES:
Würzburg. Schweinfurt.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Marshalling and locomotive facilities at Würzburg and Schweinfurt.

(b) Junctions at Würzburg, Waigolshausen, Schweinfurt and Bamberg.

(c) Bridges en route—the principal being that over the Main at 96.4 km.

13. CAPACITY:
Trains per day each way Net train load tons military stores
72 500

RAILWAYS

ROUTE 100A

MEININGEN-EBENHAUSEN-SCHWEINFURT

General Description

Forming part of the main line from Berlin via Leipzig and Erfurt to Nürnberg, this route runs in a southerly direction from Meiningen, junction also for the ST line Eisenach-Meiningen-Coburg (Route 101a), to connect with DT main line Würzburg-Schweinfurt-Bamberg-Nürnberg (Routes 100 and 101).

The line follows a winding course through a succession of valleys for c. 53 km., after which it runs cross-country to Poppenhausen (c. 68 km.). The remainder of the journey is down the valley of the R. Werra, until the line curves E to enter the valley of R. Main at Schweinfurt.

Heavy gradients may be expected, with a general tendency to fall towards Schweinfurt.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 77.9 km. (48½ miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 11.4 per mille (1 in 88).
6. MINIMUM RADIUS OF CURVES: 300 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS: 10.1 km. (6¼ miles).

9. ENGINE SHEDS:

Meiningen.

Km.	Stations	Engineering works	Details and facilities
77.9	SCHWEINFURT Hbf.	..	Passenger Station: 2 island platforms 300-400 m. long. 6 through tracks. Shunt Yard: West of station, c. 8 LS 500-700 m. long. Loco. Depot: W of SY: 2 ES (RH), holding capacity c. 50 locos, 2 Thl (25 m.). W. Storage Sidings: S of loco. depot. c. 6 DES (c. 470 m.). Goods Station: N of loco. depot. SER. Wb (40 t). Cr (8 t). 6 LS for storage, c. 300 m. long. Several DES with road access. J for DT main line. Würzburg-Bamberg-Nürnberg (Route 100), also with ST branch line to Kitzingen, on Route 90—distance to Kitzingen 49.9 km.

ROUTE 101

NÜRNBERG-FÜRTH-BAMBERG-HOCHSTADT-MARKTZEULN-NEUENMARKT-WIRSBERG
OBERKOTZAU-HOF

General Description

From Nürnberg to Hochstadt, this route forms part of the main line to Leipzig and Berlin, whilst the section Hochstadt to Hof, which is not electrified, provides the main line service from Nürnberg to Dresden and also an alternative route to Leipzig, although sharp curves N of Hof are restrictive to speeds and wheelbase.

The line runs N to Bamberg up the wide Regnitz valley, keeping close to the main road, river, and Ludwigs Kanal. From Bamberg, it takes a wide north-easterly curve up the Main valley to Mainleus, whence it continues through a succession of valleys to Neuenmarkt-Wirsberg. From this point it follows a more winding course through narrow valleys to Münchberg, ascending from 300 m. to 600 m. It then descends gradually through more open country, finally following the Sachs Saale valley to Hof (alt. 489 m.).

The most important junctions are at Nürnberg (see Plan 34), at Fürth (J with Route 90), at 63.7 km. (J with Route 100), at 95.0 km. (J with ST s.o. line connecting with Route 102), at 103.9 km. (J with DT s.o. line to Saalfeld), at Neuenmarkt-Wirsberg (J with ST s.o. line connecting with Route 102), at 132.4 km. (J with Route 100), and at Oberkotzau (J with ST s.o. line to Franzensbad and Eger).

The track is double throughout, being electrified as far as Hochstadt-Marktzeuln.

The line frequently crosses the main road and also many streams and small rivers. The most important bridges are the three over the R. Main at 104.2 km., 104.4 km. and 104.9 km. Also, bridge over Ludwigs Kanal (at 6.2 km.), bridge over R. Rednitz (at 8.9 km.), bridge over R. Regnitz (at 12.7 km.), and bridge over the R. Sachs-Saale (at 187.2 km.). There are no tunnels.

General Details

- GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
- LENGTH: 189.6 km. (117½ miles).
- TRACE:
 - Nürnberg-Hochstadt-Marktzeuln, double electrified.
 - Hochstadt-Marktzeuln-Hof, double steam.
- MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
- MAXIMUM GRADIENT: 25 per mille (1 in 40).
- MINIMUM RADIUS OF CURVES: 292 m.
- TRACTION:
 - Nürnberg-Hochstadt-Marktzeuln, electric.
 - Hochstadt-Hof, steam.
- MAXIMUM DISTANCE BETWEEN STATIONS: 8.3 km. (5 miles).
- ENGINE SHEDS: Nürnberg. Hof.
- MARSHALLING FACILITIES:
 - Nürnberg. Hof (Oberkotzau).
- WATERING FACILITIES:
 - Nürnberg. Hof.
- VULNERABLE POINTS: Marked with asterisk in text.
 - (a) Locomotive and marshalling facilities at Nürnberg and Hof.
 - (b) Railway workshops at Nürnberg and Hof.
 - (c) Junctions at Nürnberg, Fürth, Bamberg, Lichtenfels, Hochstadt-Marktzeuln, Kulmbach (122.9 km.), Neuenmarkt-Wirsberg, Oberkotzau (132.4 km. and 135.2 km.).
 - (d) Bridges at 1.4, 1.9, 6.2, 12.7, 63.7, 104.2, 104.4, 104.9, 163.7 km.
- CAPACITY:

	Trains per day each way	Net train load tons
With electric traction	90	600
With steam traction	72	500

			RpS (Locos): Operating in 2 shifts, total employed in February, 1943, was c. 2,500 men; also small wagon repair shops adjacent <i>Loko</i> to Depot. Between Loco Shops and Wagon Shops; c. 20 underground reservoirs for storage of oil and petrol.

ROUTE 101A MEININGEN-COBURG-LICHTENFELS

General Description

Connecting at Meiningen with *Route 100a* to Schweinfurt, and running as a continuation of the ST line from Eisenach on the Kassel-Erfurt-Leipzig main line, this line, although mainly ST and of low-carrying capacity because of the heavy grades and sharp curvature, provides the only main line service to Coburg.

The line runs SE from Meiningen, follows the valley of the R. Werra to Eisfeld where it turns S to Coburg through rather hilly country, entailing heavy gradients and several viaducts over valleys.

After leaving Coburg, the line once more follows the valleys of rivers through the Lichtenfels Forest to Lichtenfels, where it joins the main DT line from Nürnberg to Berlin via Leipzig, and to Dresden via Hof (*Route 101*).

At Themar, a facing J connects with the ST line to Schleusingen which from there runs to Ilmenau as mixed rack and adhesion, and finally to Plauen on the main Schweinfurt-Erfurt line. The gradients on this line (the Thüringerwald Railway) are 1/40 for the adhesion sections and 1/17 for the Abt rack sections, with curves of 250 m. and 200 m. respectively.

Other connections with minor lines are at Eisfeld with a metre gauge line to Unterreubrunn, and a standard gauge ST line to Sonneberg, junction for Probstzella and Stockheim on the Nürnberg-Leipzig main electrified line, at Coburg with a ST branch line to Sonneberg, and at Ebersdorf with a further single track line to Neustadt, on the Coburg and Sonneberg line.

General Details

- GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
- LENGTH: 90.2 km. (56 miles).
- TRACK:
 - Meiningen-Grimmenthal, double.
 - Grimmenthal-Coburg (Passenger Station), single.
 - Coburg (Passenger Station)-Credlitz, double.
 - Credlitz-Lichtenfels, single.
- MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
- MAXIMUM GRADIENT: 10 per mille (1 in 100).
- MINIMUM RADIUS OF CURVES: 300 m.
- TRACTION: Steam.
- MAXIMUM DISTANCE BETWEEN STATIONS: 10.5 km. (6½ miles).
- ENGINE SHEDS: Meiningen. Coburg.
- MARSHALLING FACILITIES: No details.
- WATERING FACILITIES: Meiningen. Coburg.
- VULNERABLE POINTS: Marked with asterisk in text.
 - (a) Locomotive facilities and workshops at Meiningen and Coburg.
 - (b) Junctions at Meiningen, Coburg and Lichtenfels.
 - (c) Bridges at 6.3, 7.9 27.2, 39.0 and 88.4 km.
- CAPACITY:

<i>Trains per day</i>	<i>Net train load tons</i>

ROUTE 102

NÜRNBERG-SCHNABELWAID-KIRCHENLAIBACH-MARKTREDWITZ-EGER (CHIEF)

General Description

The line, which is steam-operated and mainly ST, provides the route for the direct service to Eger (Chief) on the NW frontier of Czechoslovakia, Karlsbad and Dresden.

Junctions at Nürnberg (see Plan 34) connect with lines N to Bamberg, Leipzig and Berlin (Route 100), Würzburg (Route 90), W to Ansbach and Karlsruhe (Route 74), S to München (Route 87) and Regensburg and Passau (Route 104), and E to Fürth and Pilsen (Route 103). En route, the principal junctions are at Schnabelwaid for Bayreuth, Kirchenlaibach for Bayreuth and Neuenmarkt-Wirsberg and for Weidern to the S, at Marktredwitz for the main line N to Hof, S to Weisau (Route 107), whilst at Eger the line divides into two DT main lines, one S. to Karlsbad, the other N to Plauen on the line Hof-Leipzig, and in addition ST lines connect SW. to Weisau on Route 107, and SE to Pilsen.

From Nürnberg the line follows the valley of the R. Pegnitz which at Hohenstadt turns sharply N and narrows considerably, following a winding course all the way, involving many bridges over the river and tunnels through escarpments in order to avoid very sharp curves.

Shortly after leaving Pegnitz, the line leaves the Pegnitz valley and turns NE to follow the valley of the Weiher to its source and continues to the Czech border through hilly country involving two more tunnels.

Gradients are severe and have a general tendency to rise all the way from Nürnberg to Eger.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 151.4 km. (94 miles).
3. TRACK:
Nürnberg-Marktredwitz (124.2 km.), double.
Marktredwitz-Eger (27.2 km.), single.

4. MAXIMUM PERMITTED AXLE LOAD: 20 metric tons.

5. MAXIMUM GRADIENT: 12½ per mille (1 in 80).

6. MINIMUM RADIUS OF CURVES: 300 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

DT:

10.4 km. between Immenreuth and Neusorg.

ST:

9.4 km. between Mühlbach and Eger.

9. ENGINE SHEDS:

Nürnberg. Eger.

No other details.

10. MARSHALLING FACILITIES:

Nürnberg.

No other details.

11. WATERING FACILITIES:

Nürnberg. Eger.

No other details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Marshalling facilities at Nürnberg.

(b) Locomotive sheds and repair shops at Nürnberg and Eger.

(c) Bridge 1.6 km., 3.1 km.; over Pegnitz between 35.1 and 60.8 km.

(d) Tunnels at 43.9, 45.7, 46.5, 46.8, 47.0, 47.8, 88.2 and 116.7 km.

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
Nürnberg-Marktredwitz	48	300-400
Marktredwitz-Eger	12	300-400

ROUTE 102A

SCHNABELWAID-BAYREUTH-NEUENMARKT-WIRSEBERG

General Description

Although only ST, yet by connecting with the main DT lines, Routes 101 and 102, this line provides the only main line service to Bayreuth, both from the Bamberg direction and also by the more direct route via Schnabelwaid.

At Bayreuth trailing junctions connect with a ST line from Kirchenlaibach (on Route 102) and with a ST local line from Kulmbach (on Route 101).

From Schnabelwaid to Neuenreuth, the line follows the valley of the R. Weiher and rising gradients may be expected, increasing after leaving Neuenreuth when it enters rather more hilly country, before entering the broad valley of the Trebgast R. at Bayreuth which it follows for the rest of the journey.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 39.2 km. (24½ miles).
3. TRACK: Single.

Distance from Schnabelwaid

4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: No details, but will most probably be found to be heavy.
6. MINIMUM RADIUS OF CURVES: No details.
7. TRACTION: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS: 8.4 km. (5¼ miles).
9. ENGINE SHEDS: No details.
10. MARSHALLING FACILITIES: No details.
11. WATERING FACILITIES: No details.
12. VULNERABLE POINTS: No important engineering works appear to exist, and the most vulnerable points of the line are the junctions at Schnabelwaid, Bayreuth and Neuenmarkt-Wirsberg.
13. CAPACITY:

Trains per day each way	Net train load tons military stores
12	300-400

39.2	NEUENMARKT-WIRSBERG	..	SER. Wb (40 t). Cr (4.5 t).

ROUTE 103

NÜRNBERG HBF-NEUKIRCHEN-IRRENLOHE-SCHWANDORF-CHAM-FÜRTH-IM-WALD

General Description

Forming the main route for trains from Nürnberg to Fürth on the Czechoslovakian border, this line runs DT in an easterly direction along the Pegnitz valley to Hersbruck, whence it follows the narrow, winding valley of a tributary of the Pegnitz, and after reaching the source crosses the watershed and turns SE down the valleys of the R. Regen and R. Ilz to Amberg.

At Amberg the line leaves the Ilz valley, and crosses the Freiholzer Forest to Irrenlohe, where it joins and runs in common with Route 107 (DT main line to Regensburg Hbf) to Schwandorf.

After leaving Schwandorf the line branches away from Route 107 and crosses high forest land into the Regen valley to Cham, whence it turns NE and follows the R. Cham into the mountainous region of the Böhmer Wald to Fürth.

The principal junctions are at Nürnberg (see Plan 34); at Pommelsbrunn where a trailing connection with Route 102, which runs along the other side of the Pegnitz valley, provides an alternative route from Nürnberg; at Irrenlohe and Schwandorf with Route 107, and at Cham with the ST branch line to Straubing.

The heaviest gradients will be between Hersbruck and Amberg, Schwandorf and Posing, and Cham and Fürth, whilst the sharpest curves will be between Hersbruck and Amberg, Cham and Fürth.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.) standard.

2. LENGTH: 160.9 km. (100 miles).

3. TRACE:

Nürnberg-Amberg, double.

Amberg-Irrenlohe, single.

Irrenlohe-Schwandorf, double.

Schwandorf-Fürth, single.

4. MAXIMUM PERMISSIBLE AXLE LOADS:

Nürnberg Hbf-Posing, 20 metric tons.

Posing-Cham, 18 metric tons.

Cham-Fürth-im-Wald, 16 metric tons.

5. MAXIMUM GRADIENT: 12 per mille (1 in 25).**6. MINIMUM RADIUS OF CURVES: 500m.****7. TRACTION: Steam.****8. MAXIMUM DISTANCE BETWEEN STATIONS:**

10.2 km. (6½ miles).

Neukirchen 45.1 km.-Sulzbach-Rosenberg,

55.3 km.

9. ENGINE SHEDS:

Nürnberg.

Schwandorf.

10. MARSHALLING FACILITIES: Nürnberg.**11. WATERING FACILITIES:**

Nürnberg.

Schwandorf.

No other details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Locomotive and marshalling facilities given in 9 and 10 above.

(b) Junctions at Nürnberg, Pommelsbrunn, Irrenlohe, Schwandorf and Cham.

(c) Bridge at 92.9 km.

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
Nürnberg-Amberg	48	300-400
Amberg-Fürth	12	300-400
(Throughout capacity)

152.5	WEIDING	..	Passenger station. Line crosses main road before station.
156.0	ARNSCHWANG	..	SR. Line crosses secondary road.
157.0	..	..	Line crosses main road to Furth.
159.9	..	..	Line crosses minor road. Line crosses main road to Furth.
160.9	FURTH-IM-WALD	..	SER. Wb (40 t). The line crosses the Czechoslovak frontier and continues to Pilsen.

ROUTE 104

NÜRNBERG (HBF)-NEUMARKT-REGENSBURG-PLATTLING-PASSAU

General Description

Provides together with Routes 85 and 90, the direct service from Frankfurt to Austria. The line, which is DT and steam operated throughout, proceeds from Nürnberg in a south-easterly direction through hilly wooded country to Regensburg, whence it runs through the wide Danube basin to Plattling, where the Danube enters hilly country and to avoid difficult gradients the line closely follows the right bank of the Danube to Passau on the Austrian frontier.

The principal junctions are at Nürnberg (see Plan 34), Regensburg (see Plan 36), Plattling with lines S from Landshut and Mühldorf and lines N to Regen and Eisenstein, and at Passau with the line to Linz and Vienna.

Gradients generally speaking will not be difficult, and the most severe will occur between Nürnberg and Regensburg, and Plattling and Passau.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 218.1 km. (135½ miles).
3. TRACK:
 - 0.0 km.-0.7 km., 12 track.
 - 0.7 km.-3.3 km., double track.
 - 3.3 km.-8.0 km., 4 track.
 - 8.0 km.-218.1 km., double track.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 10.3 per mille (1 in 97).

6. MINIMUM RADIUS OF CURVES: 252 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

10.5 km. (6½ miles).
Neumarkt (Oberpf.) 36.0 km.
Deining (Oberpf.) 45.5 km.

9. ENGINE SHEDS:

Nürnberg. Plattling.
Regensburg. Passau.

10. MARSHALLING FACILITIES:

Nürnberg. Regensburg.

11. WATERING FACILITIES: As in 9 above; no other details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Marshalling and locomotive facilities given in 9 and 10 above.

(b) Railway workshops at Nürnberg and Regensburg.

(c) Junctions at Nürnberg, Regensburg, Straubing, Plattling and Passau.

(d) Bridges at 1.8, 21.6, 35.4, 48.3, 75.1, 95.0 (over Danube), 125.7, 126.4, 152.6, 167.8 (over Isar) and 190.0 km.

13. CAPACITY:

	<i>Trains per day each way</i>	<i>Net train load tons military stores</i>
(Throughout capacity)	60	500

Km.	Stations	Engineering works	Details and facilities
*190-0	..	Bridge over R. Vils.	J (trailing) right, with ST s.o. line from Aldenbach (s. 12.5 km.).
194-6	VILMSOFEN (NIEDERBAY.)	..	SER. Wb (40 t). Cr (4 t). Line continues to follow closely the course of the R. Donau and runs ESE.
197-2	..	..	J (facing) right, with ST s.o. line to Ortenburg (10.3 km.).
202-5	..	..	Line crosses main road to Passau and runs between the main road and the R. Donau.
202-6	..	Bridge or culvert over stream.	
203-0	SANDSBACH (NIEDERBAY.)	..	SER. Wb (33 t).
203-6	..	Bridge or culvert over stream.	
205-0	..	Road overbridge.	Carrying main road. Line crosses minor and secondary road.
206-3	SEIBTETTEN	..	Restricted goods facilities. (Packages up to 500 kg.). Line follows the course of the R. Donau to Passau.
207-9	..	..	Line runs E.
209-0	..	..	Line crosses main road to Passau.
211-0	SCHALDUNG	..	SER. Line runs SE.
212-3	..	...	Line crosses main road. Line crosses numerous small roads.
213-4	HEIDING	..	Restricted goods facilities. Line crosses a minor road.
*215-1	..	..	J (trailing) left, with ST s.o. line which crosses the R. Donau to Kalteneck (17.3 km.). At Kalteneck the line divides and runs— (1) ST s.o. (54.1 km. from Kalteneck) to Deggendorf on the ST s.o. Plattling-Regen line; and (2) to Haidmühle on the Czech frontier. Line runs in a mainly easterly direction to Passau. Line crosses minor road.
215-2	..	Bridge or culvert over stream.	
215-3	..	..	Line crosses minor road.
*215-4	..	..	J (trailing) right with ST s.o. line from Pocking (31.4 km.). The line branches at Pocking and runs from there— (1) ST s.o. to Neumarkt-St. Veit (63.1 km.) on the ST s.o. Mühldorf-Landshut line. (2) ST s.o. to Simbach (maximum axle load 12.5 t), where it joins the s.o. Simbach-München line (Route 108). Line crosses minor road. Line crosses main road. Ditto
216-7	..	..	
*218-1	PASSAU Hbf.	..	SER. -Wb (60 t). Cr (15 t). ES. TM. W. Line continues DF s.o. across the old Austrian-German frontier to Wels, Linz, and Vienna.

RAILWAYS

ROUTE 109

INGOLSTADT (MAIN STATION)-REGENSBURG HBF

General Description

This line connects the DT München-Treuchtlingen (Route 87) with the DT s.o. Nürnberg-Passau line (Route 104). The line is steam operated throughout and ST except for 3.7 km. from Regensburg-Prüfening to Regensburg which is DT.

The line runs SSE from Ingolstadt for a short distance, then E to Manching, and for the rest of the way in a mainly NE direction to Regensburg.

There are no steep gradients.

The line follows the valley of the R. Donau (Danube); from Saal to Regensburg it follows it very closely with many curves.

There are 2 bridges across the R. Donau at 56.2 and 68.4 km.

Principal junctions are Ingolstadt for the ST s.o. line to Augsburg (Route 88) and the DT München-Treuchtlingen line (Route 87), Regensburg for the DT s.o. Nürnberg-Passau line (Route 104), the DT s.o. line to Hof (Route 107) and the DT electrified line to München (Route 106).

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.

2. LENGTH: 73.9 km. (45½ miles).

3. TRACK:

Ingolstadt-Regensburg-Prüfening, single.
Regensburg-Prüfening-Regensburg, double.

4. MAXIMUM PERMISSIBLE AXLE LOAD:

Ingolstadt-Regensburg-Prüfening, 18 metric tons.

Regensburg-Prüfening-Regensburg Hbf,
20 metric tons.

5. MAXIMUM GRADIENT: 10 per mille (1 in 100).

6. MINIMUM RADIUS OF CURVES: 200 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

7.4 km. (4½ miles).

Münchsmünster, 20.2 km.-Neustadt (Donau),
27.6 km.

9. ENGINE SHEDS:

Ingolstadt.

Regensburg.

10. MARSHALLING FACILITIES: Regensburg.

11. WATERING FACILITIES: As in 9 above.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Locomotive and marshalling facilities at Ingolstadt and Regensburg.

(b) Junctions at Ingolstadt and Regensburg.

(c) Railway workshops at Ingolstadt and Regensburg.

(d) Bridges over Danube on Route 87 and at 5.7, 8.9, 14.6 (over Danube) and at 68.4 km. (over Danube).

13. CAPACITY:

Trains per day Net train load tons
each way military stores

(Throughput capacity) 16

400

Distance from Ingolstadt

34-3	..	..	Line crosses minor road.
34-3	..	..	Line runs NE.

Km.	Stations	Engineering works	Details and facilities
37.1	ARNHOFEN	..	Restricted goods facilities. (Packages up to 250 kg.) Line runs N and then SNW to Thaldorf-Weltenburg. Line crosses minor road. Carrying main road to Regens- burg. Line crosses several minor roads.
37.8	..	Road overbridge.	
41.7	..	Bridge or culvert over stream (Hopfen).	
41.9	..	Road overbridge.	Carrying minor road..
42.2	THALDORF-WELTENBURG	..	SR.
42.5	..	Bridge or culvert over stream (Hopfen).	
44.3	..	Bridge or culvert over stream (Hopfen).	Line curves sharply right and crosses minor road.
45.2	..	Ditto	Line crosses minor road.
45.6	..	Ditto	
47.0	..	..	Line runs NE.
47.3	..	Ditto	Line crosses main road.
48.4	..	..	Line crosses secondary road. J (trailing) left, with ST s.o. line from Kelheim (s. 4-6 km.). Line runs E to station.
49.2	SAAL (DONAU)	..	SER. Wb (40 t). Line now has many curves and closely follows the course of the R. Donau (Danube), crossing it twice.
49.5	..	Road overbridge.	Carrying main road.
49.8	..	Bridge or culvert over stream.	
50.4	..	..	Line crosses minor road. Line crosses main road.
54.9	BAD ABBACH	..	SER. Wb (32 t). Line crosses minor road at station. Line crosses minor road.
56.2	..	Bridge over R. Donau.	Line crosses minor road. Line curves left and crosses minor road.
58.8	GUNDELSHAUSEN	..	SER. Wb (30 t). Line crosses 3 roads curving sharply right.
61.8	MATTING AUSWEICHE	..	Station for railway personnel.
62.6	MATTING	..	Passenger station. Line curves left crossing 2 minor roads before Sinzing. J (trailing) left at Sinzing station with ST s.o. DE line from Alling (4.1 km.).
67.7	SINZING	..	SER. Wb (30 t). It is possible that there is an auto- bahn between Sinzing and Re- gensburg carried over the line by a road overbridge. (Marked as under construction on map.) There are 3 passenger halts be- tween Sinzing and Regensburg: Putenzen called Kleinputzenzen, Regensburg-Pfingstent and Regensburg-Schutzenheim.

Km.	Stations	Engineering works	Details and facilities
068.4	..	Bridge over R. Dnau.	Line crosses secondary road.
69.4	..	Fly-over.	Line passes under DT s.o. line from Nürnberg (Route 104).
70.2	REGENSBURG-PRÜFENING	..	SER. J (trailing) right at Regensburg-Prüfening station with DT s.o. line from Nürnberg (Route 104). Line crosses secondary road after halt. Line crosses minor road. Line crosses roads in Regensburg.
73.9	REGENSBURG Hbf.	..	MY (at Jurgweinting). ES. Tbl. Rps. SER. Wb (40 t). Cr (15 t). (For station details, see Route 106.) J with DT s.o. lines to Passau (Route 104) and Hof (Route 107). DT electrified line to München (Route 106).

ROUTE 106

MÜNCHEN HBF-LANDSHUT-REGENSBURG

General Description

Forming, together with Route 107, part of the main line from München to Leipzig and Berlin, the line first runs W from München, and branches away from the main lines to Stuttgart and Nürnberg to run NE along the wide valley of the R. Isar to Landshut, where it turns N to cross rising country and several minor river valleys, into the Danube basin, to Regensburg.

The principal junctions are at München with the lines to Stuttgart (Route 82), Treuchtlingen to Nürnberg (Route 87), Innsbruck (Route 122), Buchloe and Kempten (Route 119), Rosenheim, Salzburg and Innsbruck (Route 123); at Landshut with ST lines NE to Plattling, Eisenstein and Pilsen, and SE to Mühldorf, and at Regensburg where electric traction terminates, with main s.o. lines Nürnberg to Passau (Route 104), and Regensburg-Eger-Hof-Leipzig, Berlin (Route 107), and the ST line to Ingolstadt (Route 105).

Regensburg and München are 2 of the 3 most important railway centres in Bavaria, the third being Nürnberg, and both places are well equipped with marshalling and locomotive facilities, as well as railway workshops.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 138.2 km. (85½ miles).
3. TRACK: Double.

REGENSBURG HBF-SCHWANDORF-IRRENLOHE-WEIDEN-WIESAU-MARKTREDWITZ-OBERKOTZAU-HOF

General Description

Connecting with Route 104 from Passau, Route 103 from Ingolstadt, and Route 106 from München, this line provides the main-line service for traffic from those places to Dresden, Leipzig and Berlin, although so far as Ingolstadt is concerned a through DT main line via Nürnberg (Route 87) provides a more direct route.

From Regensburg, the line branches N at the junction with Route 106 at 2.2 km. and, after crossing the Danube, proceeds along the Regen valley to Regensburg, where it crosses slightly hilly country to the valley of the R. Naab at Klardorf and follows the valley to Reuth near the source of the river, to continue thence for the rest of the journey through mountainous country, joining Route 102 at Marktredwitz.

The most difficult gradients will be experienced between Regensburg (1.5 km.) and Lohmütz (33.1 km.) and from Weiden (80.6 km.) to Hof.

Important junctions are at Regensburg (see Plan 36), at Schwandorf and Irrenlohe with Route 101 (Nürnberg-Fürth), at Weiden with the ST line to Kirchenlaibach on Route 102, at Wiesau with the ST line to Fegert, at Marktredwitz with Route 102 (Nürnberg-Fegert) and at Oberkotzau with the main line from Nürnberg (Route 101) and also the ST line from Fegert.

Of the many bridges over rivers, several of which are not inconsiderable, the following details of the bridge over the Danube at 3.6 km. taken from air cover, are worth noting:

Flood opening on North approach:

Total length including abutments c. 103 m., with clear span between abutments of c. 83 m., composed of 5 spans of c. 17 m. (centre to centre piers) which are probably masonry arches.

The flood opening is followed by c. 135 m. of high, earth embankments, succeeded by a viaduct c. 612 m. long, crossing the R. Danube and low land on both sides of it, and the entrance to a dock. This viaduct is as follows:

Viaduct (North bank):

3 masonry or concrete arches of c. 11 m. opening.

Over R. Danube: 5 lattice girder through spans c. 51 m. long (centre to centre piers) (2 piers in river).

Viaduct (South bank) (see Plan 36):

12 masonry or concrete arches of c. 17 m. spans (centre to centre piers).

Over dock entrance: one skew, through, lattice girder span of c. 17 m. clear span.

The whole viaduct carries DT.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in). Standard.
2. LENGTH: 179.2 km. (111½ miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 19 per mille (1 in 100).
6. MINIMUM RADIUS OF CURVES: 400 m.
7. TRACTION: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS:
10.4 km. (6½ miles).
Reith 109.5 km. - Wiesau 119.9 km.
9. ENGINE SHEDS:
Regensburg. Schwandorf. Wiesau.
10. MARSHALLING FACILITIES:
Regensburg. Hof (Oberkotzau).
11. WEEDING FACILITIES: As in 9 above. No other details.
12. VULNERABLE POINTS: Marked with asterisk in text.
(a) Marshalling and locomotive facilities given in 9 and 10 above.
(b) Junctions at Regensburg, Schwandorf, Irrenlohe, Weiden, Wiesau, Markttredwitz and Oberkotzau.
(c) Bridges at 3.6 (over Danube), 15.5 (over Regen), 43.2 (over Naab), 50.3, 57.1, and 57.7, 79.3, 98.9, 102.6, 101.2, 103.1-104.5, 139.7, 155.6, 170.2 Km., and 176.8, and also bridge over Saale, N of Hof station (see Photograph 26).
13. CAPACITY:
Trains per day Net train load tons.
each way military stores
(Throughout capacity) 60 500

Distance from Regensburg

1782	..	..	Line curves NW.
*1792	HOF HAB.	..	Passenger and goods station. SER. Wb (40 t). Cr (30 t). MY. Loco depot. RpS (Loco and C and W). For details, see Route 101. J (facing) left, with T s.o. line to Bad Steben (27.0 km.) and Schwarzenbach am Wald (28.7 km.).

ROUTE 108

MÜNCHEN (HBF)-MÜHLDORF-SIMBACH

General Description

The line runs in a NE direction from München to Walpertskirchen (42.9 km.), where it turns eastwards to follow the valley of the R. Isen to Mühlendorf J for ST lines SW to Rosenheim (Route 109), SE to Freilassing (on Route 124), and N to Neumarkt St. Veit J for Landshut on the München-Regensburg main line, Landau on the Landshut-Plattling ST line, and Pocking on the branch line Simbach-Passau.

From Mühlendorf, the line follows left bank of the R. Inn to Simbach, where the main line crosses the Inn and the German-Austrian frontier to Ried, Linz and Vienna, whilst the branch to Passau continues N of the river.

Track is mainly single but the line is of some importance in providing main line service to Mühlendorf and Simbach, in addition to an alternative route for Linz and Vienna, to that afforded by the main DT line via Salzburg.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
- LENGTH: 123.5 km. (76½ miles).
3. TRACK:
 - München Hbf-Markt Schwaben (30.9 km.), double.
 - Markt Schwaben-Simbach, single.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.

5. MAXIMUM GRADIENT: 7 per mille (1 in 139).

6. MINIMUM RADIUS OF CURVES: 400 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

8.6 km. (5½ miles).

Thann-Matzbach 48.3 km.-Dorfen 56.9 km.

9. ENGINE SHEDS:

München-Pasing

München Ost.

Simbach.

10. MARSHALLING YARDS:

München-Pasing.

München Ost.

11. WATERING FACILITIES: As in 9 above, no other details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Railway workshops at München, also locomotive and marshalling facilities given in 9 and 10 above.

(b) Junctions at München, Mühlendorf and Simbach.

(c) Bridges at München (see Plan 32 and 32c), also at 6.3, 32.7, 35.3, 42.4, 52.7, 82.3 and 86.0 km.

13. CAPACITY:

Trains per day
each way

Net train load tons
military stores

(Throughout capacity) 12-16

400

ROUTE 108A

MÜHLDORF-NEUMARKT-ST. VEIT-LANDSHUT

General Description

Linking Mühlhof with Landshut, this line together with Route 109 provides a route for traffic from the area S of Rosenheim to N Bavaria, Leipzig and Berlin alternative to the main DT route via München.

After the junction with Route 108 at 0.5 km., the line proceeds northwards, crossing the Inn valley to proceed along the valley of a tributary to its source and thence to Neumarkt, J for ST lines to Landau on the Plattling line, and Pocking on the Simbach-Passau line.

From Neumarkt the line turns NW to continue through rather hilly country along the valley of the Tegern Bach to 22.5 km. and thence proceeds through a hilly range crossing several minor valleys and finally the R. Isar shortly before joining the main electrified line München-Regensburg (Route 108) at Landshut.

Gradients will most probably be severe throughout the route.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 54.5 km. (33½ miles).
3. TRACK: Single.

4. MAXIMUM PERMISSIBLE AXLE LOAD:

Mühlhof (Oberbay.)-Neumarkt-St. Veit,
18 metric tons.
Neumarkt-St. Veit-Landshut, 20 metric tons.

5. MAXIMUM GRADIENT: 13 per mille (1 in 74).

6. MINIMUM RADIUS OF CURVES: 300 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

8.9 km. (5½ miles).

9. ENGINE SHEDS: Landshut.

10. MARSHALLING FACILITIES: No information.

11. WATERING FACILITIES:

Landshut. (No other details.)

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Locomotive facilities at Landshut.

(b) Junctions at Mühlhof, Neumarkt-St. Veit and Landshut.

(c) Bridges at 1.5, 4.5, 22.5, 31.3, 41.2 and 51.9 km.

13. CAPACITY:

Trains per day each way	Net train load tons military stores

54.5	LANDSHUT (BAY.) Hbf.	..	SER. Wb (40 t). Cr (10 t). For details of station, see Route 106. Line continues DT electric to Regensburg as Route 106.

MÜHLDORF TO FREILASSING

ROUTE 108

MÜHLDORF-FREILASSING

General Description

Together with Route 108, with which it is connected at Mühlendorf, this line, although ST provides an alternative route between München and Salzburg to that provided by Routes 123 and 124.

From Mühlendorf the line proceeds S, crossing the hilly country dividing the valleys of the R. Inn and R. Alz, to Garching (16.4 km.) J for a local branch line to Traunstein on Route 124.

From Garching the line turns SE, passing through hilly country to Laufen on the German-Austrian frontier, whence it proceeds S along the valley of the R. Salzach to join the main line from München.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 65.5 km. (40½ miles).
3. TRACK: Single.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 11 per mille (1 in 90).
6. MINIMUM RADIUS OF CURVES: 450 m.

7. TRACKING: Single.

8. MAXIMUM DISTANCE BETWEEN STATIONS: 7.4 km. (4½ miles).

9. ENGINE WEIR: Freilassing.

10. MARSHALLING FACILITIES: Freilassing.

11. WATERING FACILITIES: Freilassing.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Marshalling and locomotive facilities at Freilassing.

(b) Junctions at Mühlendorf, Garching and Freilassing.

(c) Bridges at 3.3, 16.9, 17.6, 61.8 km., the most important being that over the R. Inn at 3.3 km. and that over the Alz at 17.6 km.

13. CAPACITY:

ROSENHEIM TO MÜHLDORF

115

ROUTE 123

ROSENHEIM-MÜHLDORF

General Description

Connecting at Rosenheim with Route 123 from Innsbruck, in addition to Route 124 from Salzburg, this line, which is ST throughout, together with Routes 108a and 108, provides means for through services for traffic from places S. of Rosenheim, to N Bavaria, as an alternative to the main line via München.

The line follows the course of the R. Inn, which it crosses at 36.5 and 47.8 km., and gradients therefore are not considerable, the only point where gradients are likely to be restrictive being between Wasserburg and Gars.

At Wasserburg the line is joined by a local branch line from Grafing on the main München-Rosenheim line, but the capacity of this line would be very light and the line is only of local importance.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 61.7 km. (38½ miles).
3. TRACK: Single.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 17 metric tons.

5. MAXIMUM GRADIENT: 5.6 per mille (1 in 178).

6. MINIMUM RADIUS OF CURVES: 300 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

9.5 km. (6 miles).

Kraiburg 52.2 km.-Mühldorf 61.7 km.

ROUTE 110

BASEL DRB PPH-LORRACH-SCHOPFHEIM-SACKINGEN

General Description

This ST line, which provides an electrified local service to the area around Basel on the German side of the R. Rhine, affords also a service to Sackingen alternative to that provided by Route 113.

The line follows the valley of the R. Wiese to Schopfheim, where it turns E via a long tunnel c. 3 km. long under the Kurnberg to enter the narrow valley of a further tributary and proceed S to join the main line at Sackingen.

A J at Lorrach connects with a loop line from Weil MY, and at Schopfheim an electrified branch line to the N connects with Zell, where interchange facilities exist with a narrow gauge line running further N into the mountains to Todtnau.

Sources for supply of power are at Rheinfelden and Ryburg-Schworstadt.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 41.2 km. (25½ miles).
3. TRACK:

ROUTE 111

BASEL-FREIBURG-OFFENBURG-APPENWEIER

General Description

Together with Route 75 and 67, this line provides the only direct main line service from the Swiss frontier to Karlsruhe, Mannheim and Frankfurt.

Forming one of the oldest German trunk lines, it was originally built to the Irish gauge (1-67 m.) but was converted to standard gauge in 1855.

Running N from Basel between the Schwarzwald (wooded hilly district) and the Rhine, the line at first closely skirts the hillside, with 3 tunnels between Ebingen and Kleinheim.

After Schliengen (26.5 km.) the line descends into the Rhine valley and for the rest of the journey runs in fairly straight stretches over more level country, crossing many streams and a few rivers, and carried over marshy ground by embankments.

The exit from Basel is particularly vulnerable from the point of view of bridges, the R. Wiese entailing no less than 10 bridges of c. 70-90 m. for the main line and connections serving the MY, goods yard and dock installations.

At Freiburg a deviation is made to serve the town, while goods traffic and through trains run over an avoiding line running direct from Leutensberg to Gündelfingen.

The principal junctions, in addition to Basel where connections exist with the Swiss Federal Railways over the Rhine and with Route 113 to Singen and Konstanz, are at Mülheim with Route 111d from Mülhausen, at Freiburg with Route 111a from Colmar, and Route 111b to Donaueschingen and at Appenweier with the main line Strasbourg-Karlsruhe (Route 75).

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 132.2 km. (82½ miles).

3. TRACK: Double.

4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.

5. MAXIMUM GRADIENT: 6 per mille (1 in 165).

6. MINIMUM RADIUS OF CURVES: 304 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

Freiburg (Breisgau) Hbf-Gündelfingen, 5.6 km.

9. ENGINE SIZES:

Basel DRB. Haltingen.
Freiburg Hbf. Offenburg.
Freiburg Gbf.

10. MARSHALLING FACILITIES:

Basel. Freiburg. Offenburg.

11. WATERING FACILITIES: As in 9 above. No other details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Locomotive and marshalling facilities given in 9 and 10 above.

(b) Repair shops at Basel.

(c) Junctions at Basel, Mülheim, Freiburg and Offenburg.

(d) Bridges at Basel (0.9, 1.0, 4.8 km.) and at 48.3, 61.3, 61.6, 71.7, 88.2, 88.6 and 121.3 km.

(e) Tunnels at 10.7, 13.7 and 14.2 km.

13. CAPACITY:

Trains per day	Net train load tons
each way	military stores
72	500

Distance from Basel

Am.	Stations	Engineering works	Details and facilities
0	BASEL (DRB)		Main Station, German State Rly. SER. Wb (40 t). Cr (20 t). ES. Thl. W. MY. Rps. Passenger Station: 2 main platforms (island), c. 600 m. long with 3 shorter platforms (covered) to the E, 2 x 200 m., 1 x 250 m. long. Main station entrance on W-12 through tracks. DT goods line from Muttens and Lottach direction to MY E of coaling plant—five ground photographs of N and S approaches to station, see photographs 9 and 10. Carriage Siding: N of station, E of running lines, c. 9 LS 360-400 m. W of running lines a further group of 6 short LS with grid of spurs from one siding serving sheds, herring-bone design, probably used for parcels traffic—size of shed 120 x 30 m., with 4 storage bays. Goods Station: N of passenger station, E of line, 1 LS, 200 m. long with through siding. Length of shed 120 m., width 30 m. N and S ends of shed 120 m. long.

K.	Stations	Engineering works	Details and facilities
			Mechanical coaling plant, S of shed (E. of passenger station)—traveller type, see Photograph 9. Goods Station: Served by connection from MY by a bridge over R. Wiese, c. 67 m. long—probably lattice girder through. SEB. Wb (40 t). Cr (20 t). Modern, well equipped, and well designed yard. 2 goods sheds herring-bone design, one c. 320 x c. 35 m. with 8 bays, the other c. 280 x 35 m. with 7 bays, 3 DES c. 450 m. long situated between the sheds, with a additional DES each with grid of short spurs serving bays. W of sheds a DES c. 450 m. long, one with road access, the other with side loading facilities from shed. a DES c. 450 m. long serving similar purpose on E side of sheds. East of Sheds: 3 DES c. 340 m. (a with road access), 1 DES c. 280 m., with short spurs each side with road access, and short siding serving ramp, also 1 DES c. 250 m. with road access, also serving ramp. Further E, 1 DES c. 450 m. with 8 spur sidings serving 5 outside storage dumps, and 3 DES c. 450 m., each alongside group of warehouses. Extreme West of Yard: 3 DES c. 320 m. running alongside group of warehouses, with trailing connection at N end to industrial plant. Marshalling Yard (Weil): Capacity 2,400 wagons per 24 hours. Reception and Departure Sidings: S end of yard. Departure, 8 LS c. 800 m. long. Reception c. 6 LS, c. 800 m. long. 2 similar groups of sidings extend N of Weil station. Marshalling Sidings: 2 groups of c. 13 LS each, c. 700-750 m. Sorting Sidings: Between 3 reception and departure sidings, comprising c. 26 LS each c. 135 m. In addition, 3 groups of LS W of yard— (1) 16 c. LS c. 700 m., with connection to goods yard, industrial establishments W of line and also to port area. (2) c. 8 LS c. 340 m. long, probably subsidiary sorting sidings. (3) c. 13 LS c. 340 m. long, connected at N end to Rps. Docks Sidings: Adjacent to river and served by connection from MY. 8 LS c. 600 m. long, served by 2 parallel ST deck girder through bridges over R. Wiese, all converging at S end to short spur serving 2 DES running for c. 120 m. along riverside wharves. Connection also from S end of LS to 11 LS c. 100-200 m. and 3 DES c. 250 m.

Km.	Stations	Engineering works	Details and facilities
			Connections from these 2 latter groups of sidings to track basins via 3 bridges, single track deck girder through spans c. 55 m. long over R. Wiese. A small MY exists at Bâle (Basel) St. Louis (see I.S.T.D. C. 1300), and also a large MY at Moutiers (Swiss Federal Railways). Railway Workshops: N end of MY, served by large group of sidings—no details available. For location diagram of facilities Basel, see Plan 40.
0.7	..	Bridge over R. Wiese.	J (facing) with connection left to MY via bridge over R. Wiese, c. 70 m. long—probably lattice girder through span.
1.0	..	Fly-over.	c. 70 m. long—deck girder through span.
			Line crosses road and avoiding line from Sigen and Swiss frontier direction; also from Schopfheim (Route 110)—a parallel lattice girder (shw) bridge 1 x c. 70 m., 1 x c. 55 m.
			The avoiding line itself crosses the R. Wiese by a bridge c. 47 m. long, DT lattice girder through span.
2.3	..		J (trailing) right, with DT a.o. line from MY.

ROUTE 111A COLMAR-FREIBURG

General Description

Although only ST, this route is of some strategic importance in providing one of the few crossings of the Rhine connecting the Basel-Mulhouse-Strasbourg-Luxembourg line (Route 5, I.S.T.D. C/320) on the French side of the Rhine with the Basel-Appenweiler-Karlsruhe line (Routes 111 and 75) on the German side.

There are no steep gradients, the greatest being 1 in 84, and the minimum radius of curves is 600 m.

The line is particularly vulnerable from the point of view of bridges, the most important being that over the Rhine at 20 km.

General Details

- Gauge: 1,435 mm. (4 ft. 8½ in.). Standard.
- Length: 43.4 km. (26½ miles).
- Track: Single.
- Maximum permissible axle load: 16 metric tons.
- Maximum gradient: 1 in 84.

- Minimum radius of curves: 600 m.
- Traction: Steam.
- Maximum distance between stations: 8.0 km. (Colmar-Sandhofen).
- Engine sheds: Colmar. Freiburg.
- Marshalling yards: Colmar. Freiburg.
- Watering facilities: Colmar. Freiburg.
- Vulnerable points: Marked with asterisk in text.
(a) Locomotive sheds, marshalling yards and junctions at Colmar and Freiburg.
(b) Bridges at 4.2, 7.5, 10.0, 17.4, 20.0 (over Rhine), 20.5, 24.0, 25.0 and 35.2 km.
- Capacity:
Daily: 100. Net tonnage: 1,000.

Distance from Colmar

Km.	Stations	Engineering works	Details and facilities
0.0	COLMAR		Passenger Station: No details available. Goods Depot: c. 600 m. S of station and E of line. SER. Wb. Cr. No details of siding accommodation. Loco. Depot: S of station and W of line, comprising 2 ES (half RH type) served from Tbls (diameter not known) and accessible from N and S. Marshalling Yard: S of loco. depot and W of line and bounded on W side by Route 111A. Large group of LS (average length c. 700 m.). No further details. J with— (1) DT s.o. line to Mülhausen (Mülhouse), distance 42.5 km. (Line 2 (b), I.S.T.D./Tn/408, and Route 5, I.S.T.D./C/350). (2) DT s.o. line to Strasbourg, distance 65.8 km. (References as above.) (3) ST s.o. line to Metzeral (distance 24.6 km.). (4) ST s.o. line to Ensisheim and Bollwiller (on Line 2 (b) and Route 5, as above. Distance 34.2 km.). The Bollwiller line runs in parallel track with Route 111A for 3.5 km. I with— (1) Metre-gauge ST s.o. DE line to Schnierlach (Lapouroye), distance 20.4 km. (2) Metre-gauge ST s.o. DE line to Witz, distance c. 5 km. (3) Metre-gauge ST s.o. line to Strasbourg (distance c. 77.0 km.).

ROUTE 111B

FREIBURG-NEUSTADT-DONAUESCHINGEN (HOLLENTAL BAHN)

General Description

Linking the Rhine at Freiburg (Route 111) with the Danube at Donaueschingen (Route 112) this line is one of the most heavily graded in Germany.

Originally, a Klose rack section was employed between Hirschsprung and Hinterzarten where the heaviest grades of 1:18 obtain, but the rack was dispensed with upon electrification of the line. Length of the rack section was 7.2 km. (4½ miles), the culminating point, between Holsteig and Hinterzarten, being 893 m. (2,930 ft.) above sea level or 624 m. (2,047 ft.) above the starting point.

Power is obtained from the industrial supply at 50 cycles through Scott-connected transformers at Titisee, the tension of the contact wire being 20 K.V.; 2,000-h.p. electric locomotives have replaced the former 2-6-2, and 0-6-2 tank locomotives.

Engineering works include 12 tunnels of total length 2,091.1 m. and several bridges over rivers and streams, the most important being marked by an asterisk in the itinerary.

General Details

- GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
- LENGTH: 81.9 km.
- TRACE: Single.
Freiburg-Hüfingen (79.3 km.), single.
Hüfingen-Donaueschingen (2.6 km.), double.
- MAXIMUM PERMISSIBLE AXLE LOAD:
Freiburg-Neustadt, 20 metric tons.
Neustadt-Donaueschingen, 16 metric tons.

5. MAXIMUM GRADIENT:

Hirschsprung-Hinterzarten, 55 per mille (1 in 18).

Remainder of line, 25 per mille (1 in 40).

6. MINIMUM RADIUS OF CURVES: 225 m.

7. TRACTION: Electric between Freiburg and Neustadt—supply taken from industrial system at 30-K.V., 50-cycle, single-phase.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

Section Freiburg-Neustadt, 9.7 km.

Section Neustadt-J at Hüfingen, 6.7 km.

9. ENGINE SHEDS:

Freiburg. Villingen (on Route 112).

10. MARSHALLING FACILITIES: Freiburg.

11. WATERING FACILITIES: No details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Marshalling and locomotive facilities at Freiburg.

(b) Junctions at Freiburg, Titisee and Donaueschingen.

(c) Bridges, at 0.9, 1.0, 10.2, 10.7, 11.2, 33.0-35.0, 38.4, 46.9, 50.3, 58.2, 67.3, 68.4 and 77.7 km.

(d) Tunnels at 19.1, 26.8, 27.5, 48.9, 49.9 and 51.1 km.

(e) Electric sub-station at Titisee.

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
Throughout	12	100

electric traction

(Line could not be effectively worked by steam traction unless rack section were re-introduced.)

ROUTE 111C

TITISEE-ST. BLASIEN-SEEBRUGG

General Description

This ST electrified line (the Dreiseenbahn), runs SW from Titisee along the E shore of Lake Titisee to Barental (near the Feldberg), and thence runs along the valleys of several streams feeding the series of lakes in the area to Titisee.

The line is of little importance from a military point of view, but is of interest inasmuch as at Barental it reaches an altitude of 1,030 m. (3,379 ft.), the highest point reached by a standard gauge railway in Germany.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 19.1 km. (6½ miles).
3. TRACK: Single.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 18 metric tons.
5. MAXIMUM GRADIENT: 30 per mille (1 in 30).

6. MINIMUM RADIUS OF CURVES: 225 m.

7. TRACTION: Electric; 20-K.V., 50 cycles, single-phase, from industrial system of area.

8. MAXIMUM DISTANCE BETWEEN STATIONS: 7.6 km.

9. ENGINE SIZES: No details.

10. MARSHALLING FACILITIES: No details.

11. WATERING FACILITIES: No details.

12. VULNERABLE POINTS:

- (a) Electric transformer station at Titisee.
- (b) Junction at Titisee.

ROUTE 111D
MULHOUSE-NEUBURG-MÜLLHEIM

General Description

Although ST for most of its length, this line is of considerable importance in providing one of the crossings of the Rhine, connecting the main Basel-Luxemburg line on the French side to the Basel-Karlsruhe line on the German side.

Gradients and curvature are negligible.

The route takes a general direction NE, crossing the Rhine at 17.5 km., and joining the Basel-Karlsruhe line by a trailing connection at 21.4 km.

General Details

1. GAGES: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 23 km. (14½ miles).
3. TRACK:
 - Mulhouse-Ile-Napoleon (4.5 km.), double.
 - 4.5 km.-J at 21.4 km. (16.9 km.), single.
 - 21.4 km.-23.0 km. (1.6 km.), double.
4. MAXIMUM PERMISSIBLE AXLE LOAD:
 - Mulhouse-Neuburg, 20 metric tons.
 - Neuburg-Müllheim, 16 metric tons.
5. MAXIMUM GRADIENT: 3 per mille (1 in 300).
6. MINIMUM RADIUS OF CURVES: 450 m.

7. TRACTORS: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS: 6.1 km. (3½ miles).
9. ENGINE SHEDS:
 - Mulhouse-Nord.
 - Ile-Napoleon.
10. MARSHALLING YARDS: Mulhouse-Nord.
11. WATERING FACILITIES:
 - Mulhouse.
 - Bantzenheim.
12. VULNERABLE POINTS: Marked with asterisk in text.
 - (a) Marshalling and locomotive facilities at Mulhouse.
 - (b) Repair shops at Mulhouse.
 - (c) Junctions at Mulhouse, Bantzenheim and Müllheim.
 - (d) Bridges at 2.9, 4.5, 4.8 and 17.5 km., the latter over the Rhine being most important.
13. CAPACITY:

Trains per day each way	Net train load tons military stores
12	400

Distance from Mulhouse Ville

Km.	Stations	Engineering works	Details and facilities
0	MULHOUSE-VILLE	..	ES. Tbl. W (water tower capacity 500 m.³). RPS (vagnons). SER. Wb. Cr. MY (Mulhouse N.). 12 through tracks (9 passenger, 3 goods lines) converging to 9 roads NE of station, 2 for Neuburg line, 2 for loco. depot at Ile-Napoleon, 1 to Mulhouse Nord MY, 4 for Basel line. Passenger Station: 4 island platforms, c. 300 m. long. Carriage Sidings: 2 groups of LS: 1 x 6 (c. 300-450 m.). 1 x 7 (c. 350-450 m.). Goods Station: E of station, N of line (Mulhouse Wanne): 6 LS (100-250 m.) for storage, 2 DES (150-200 m.) serving goods sheds, 6 DES (100-350 m.) with road access and serving SER. Storage Sidings: S of line, c. 10 DES (c. 350 m.). 4 DES (c. 200 m.). 4 DES (c. 150 m.). 4 DES (c. 500 m.), all adjoining old loco. depot, which from air cover (May, 1944) appears to have been removed. RPS (Wagen): c. 1.5 km. E of station, S of line, equipped to deal with all heavy repairs—total personnel employed c. 10000. Loco. Depot: The old ES shown on Plan 10 as S of station has been removed—a further depot exists at Ile-Napoleon, comprising large RH, Tbl, workshops and for running repairs, overhauled trucks in open, large coal dump equipped with mechanical shovel and power trucks, etc.

ROUTE 111

OFFENBURG-HAUSACH-VILLINGEN-DONAUESCHINGEN-IMMENDINGEN-SINGEN-RADOLFSZELL-KONSTANZ

General Description

This line, which includes the Black Forest Railway, by-passes the bend of the Rhine and provides the most direct service to Konstanz from the Karlsruhe direction, although the Basel route is mostly favoured owing to the heavy gradients on the other, particularly between Hornberg (42-6 km.) and Numbach (63-7 km.) where in order to cross the mountain range a double spiral including 37 tunnels of a total length 9,535 m. is involved, as well as many bridges over rivers and streams. Principal junctions are: Offenburg for the Basel-Appenweier line (Route 111); Hausach for the line to Eutingen (Route 110); Donaueschingen for the line to Freiburg (Route 116); Immendingen for the lines to Herb and Sigmaringen; Singen for DT s.o. line to Schaffhausen and ST s.o. to Stein (Switzerland); Radolfszell for the line to Friedrichshafen (Route 117); Konstanz for lines running into Switzerland. The line runs through the Black Forest following the R. Kinzig to Hausach, after which it runs in the valley of the R. Gutach to Sommerau. From Donaueschingen the line runs in the valley of the R. Donau, over which there are 2 bridges, i.e. at 111-9 km. and 119-7 km.; at Konstanz the R. Rhein is crossed. Gradients are severe, mainly rising ones to Sommerau and falling ones from there to Konstanz.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 179-4 km. (111½ miles).
3. TRACK:
 - Offenburg-Villingen (85-9 km.), double.
 - Villingen-Immendingen (33-1 km.), single.
 - Immendingen-Konstanz (60-4 km.), double.
4. MAXIMUM PERMISSIBLE AXLE LOAD:
 - Offenburg-Radolfszell, 20 metric tons.
 - Radolfszell-Konstanz, 18 metric tons.

5. MAXIMUM GRADIENT: 30 per mille (1 in 50).
6. MINIMUM RADIUS OF CURVES: 300 m.
7. TRACTION: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS:
 - 9-2 km. (5½ miles).
 - Hornberg 42-6 km.-Niederwasser 51-8 km.
9. ENGINE SHEDS:

Offenburg.	Singen.
Hausach.	Radolfszell.
Villingen.	Konstanz.
10. MARSHALLING YARDS: Offenburg.
11. WATERING FACILITIES: As in 9 above. No other details.
12. VULNERABLE POINTS:
 - (a) Marshalling and locomotive facilities given in 9 and 10 above.
 - (b) Repair shops at Offenburg.
 - (c) Junctions at Offenburg (1-0 km.), Hausach (33-2 km.), Villingen (66-7 km.), Donaueschingen, Hirtschingen, Immendingen, Singen.

ROUTE 112A

HAUSACH-EUTINGEN (MURGTALBAHN)

General Description

This line, which is S.O. and ST, connects the Offenburger-Konstanz line (Route 112) at Hausach with the Immendingen-Stuttgart line (Route 114) at Hochdorf.

The line runs through the Black Forest as far as Freudenstadt following the valley of the R. Kinzig to Lonsburg-Rodt—there are a number of bridges over this river.

There are a number of short tunnels on the line and between Lonsburg-Rodt and Eutingen some viaducts over valleys.

The line is heavily graded climbing from Hausach to Freudenstadt to 736 m. (2,418 ft.) above sea level, with gradients of 50 per mille (1/20), restricting the 0-10-0 T locomotives to hauling only 3 or 4 four-wheeled carriages. From Freudenstadt gradients tend to fall for the rest of the journey.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 69 km. (42½ miles).
3. TRACK: Single.
4. MAXIMUM PERMISSIBLE AXLE LOAD:
Hausach-Freudenstadt, 16 metric tons.
Freudenstadt-Hochdorf, 17 metric tons.
Hochdorf-Eutingen, 20 metric tons.

5. MAXIMUM GRADIENT: 50 per mille (1 in 20).
6. MINIMUM RADIUS OF CURVES: 185 m.
7. TRACTION: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS:
10.4 km. (6½ miles).
Alpirsbach 22.9 km.—Lonsburg-Rodt 33.3 km.
9. ENGINE SHEDS:
Hausach. Freudenstadt.
10. MARSHALLING YARDS: None.
11. WATERING FACILITIES: As in 9 above. No other details.
12. VULNERABLE POINTS: Marked with asterisk in text.
(a) Locomotive facilities at Hausach and Freudenstadt.
(b) Junctions at Hausach, Freudenstadt and Eutingen.
(c) Bridges at 0.8, 10.7, 16.5, 16.9, 17.9, 18.9, 19.4, 20.2 and 24.3 km.
(d) Tunnels at 17.0, 29.6 and 38.3 km.
Viaducts at 36.5, 41.3, 42.6 and 43.3 km.
13. CAPACITY:
Trains per day Net train load tons
each way military stores
With special 0-10-0 locos. 8-10 80

ROUTE 113

BASEL DRB-WALDSHUT-OBERLAUCHRINGEN-SINGEN

General Description

Together with Routes 75, 111, 112, this line provides the main line service, between Karlsruhe and Konstanz, via Basel.

The line follows the right bank of the Rhine to Waldshut, J for a ST line to Turgi and Zürich. At Waldshut the line leaves the Rhine, and after crossing the valley of the R. Schlucht follows the Wutach to Oberlauchringen, J for the ST line to Hirschingen (Route 119a). At Oberlauchringen, the line crosses the Wutach and enters the valley of the R. Klinger, proceeding on a rising gradient over the Swiss frontier at Ertingen (75.2 km.) to rejoin the Rhine at Schaffhausen, J for a ST electrified line to Ertisau and Zürich. The line then crosses the Fulach and follows this river northwards to its source, and thence winds its way through various valleys to Singen, J with the Black Forest Railway from Offenburg (Route 112), the German-Swiss frontier being crossed again at Bietingen (104.2 km.).

In spite of the alignment following rivers and valleys, gradients are fairly high (1 in 6a), but not so difficult as those on the Black Forest line, the alternative main line to Konstanz from the Karlsruhe direction.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 113.4 km. (70½ miles).
3. TRACK:
Basel DRB-2.2 km., double.
2.2 km.-Beringen (Reichsb.) (84.9 km.), single.
Beringen (Reichsb.)-Singen (28.5 km.), double.

4. MAXIMUM PERMISSIBLE AXLE LOAD:

Basel-Säckingen, 20 metric tons.
Säckingen-Oberlauchringen, 16 metric tons.
Oberlauchringen-Schaffhausen, 18 metric tons.
Schaffhausen-Singen, 20 metric tons.

5. MAXIMUM GRADIENT: 16 per mille (1 in 6a).

6. MINIMUM RADIUS OF CURVES: 300 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

6.3 km. (4 miles).
Neunkirch 80.8 km.-Beringen Reichsb. 87 km.

9. KNOWN SIDES:

Basel-Badischer. Singen. Waldshut.

10. MARSHALLING FACILITIES:

Basel (Weil).
Basel (Muttens) (Switzerland).

11. WATER FACILITIES: No details available.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Marshalling and locomotive facilities given in 9 and 10 above.

(b) Repair shops at Basel.

(c) Junctions at Basel, Säckingen 28.6 km., Oberlauchringen-Singen 112.9 km.

(d) Bridges over R. Wehra (26.1 km.), R. Murg (37.5 km.), R. Alb (47.0 km.), R. Schlucht (59.3 km.), R. Wutach (62.4 and 65.2 km.), R. Fulach (93.7 and 96.5 km.) and R. Ach (112.8 km.).

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
(Throughout capacity)	12-16	250

Distance from Basel

ROUTE 113A OBERLAUCHRINGEN-HINTSCHINGEN

General Description

Connecting Routes 112 and 112, this ST line, in spite of its heavy gradients, sharp curves and low permissible axle load, is of great importance in providing the only means for through service for military movements between Basel and Singen without crossing the Swiss frontier as Route 112 does.

The line follows the valley of the R. Wutach to Wiesen on a rising gradient, and thence follows its tributary the R. Mühl, necessitating, in order to minimise the heavy gradients which would otherwise be incurred, a complete spiral and a helical tunnel, followed by 4 more spiral turns in crossing the mountainous region to the Aitach valley. Altogether 6 tunnels are involved of a total length of 4,560.5 m., and a detour of 25.6 km. (15.9 miles) compared with the distance of 10.2 km. (6.3 miles) as the crow flies between Wiesen and Blumberg.

Bridges are frequent throughout, the most important being over the Danube at 60.9 km.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 61.7 km. (38½ miles).

3. TRACK: Single.

4. MAXIMUM PERMISSIBLE AXLE LOAD: 14 metric tons.

5. MAXIMUM GRADIENT: 16 per mille (1 in 62).

6. MINIMUM RADIUS OF CURVES: 300 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

9.9 km. (6½ miles).

Lausheim-Blumberg 23.6 km.-Fützen 33.5 km.

ROUTE 114

IMMENDINGEN-TUTTLINGEN-ROTTWEIL-EUTINGEN-HERRENBURG-STUTTGART

General Description

With connections at Immendingen with the Black Forest Railway, Offenburg-Konstanz (Route 112), this line provides a main line service from Zürich and Konstanz to Stuttgart, where it connects with Route 75 for Heilbronn, Würzburg and Berlin.

From Immendingen the line proceeds along the left bank of the Danube for 7.6 km. when it crosses the river to follow the right bank of the river, converging at 8.6 km. with the fast line connection from Konstanz via Hattlingen.

At Tuttlingen, after a facing connection to the ST line to Ulm (Route 115), the line becomes ST to Sulz, and crosses the Danube to proceed with a rising gradient along the valley of a tributary to its source near Spaichingen. It then descends the valley of a tributary of the Neckar to its confluence with the Neckar at Rottweil, J for 2 local branch lines connecting with Villingen on Route 112, and with Balingen on the ST line Sigmaringen-Tübingen.

From Rottweil the line follows the Neckar with many sharp curves and bridges on a falling gradient to Horb, J for the ST line to Tübingen, Plochingen and Stuttgart (Route 115), and soon after Horb enters a tunnel of 300 m. and takes N and SE to Eutingen, J for the connecting line down Heilbronn (Route 112), and the SE alternative line to Stuttgart via Calw.

From Eutingen the line crosses the Neckar and enters the Heilbronn valley, where it is joined by a ST line from Tübingen.

The line is a main line service with a maximum

The track is double, apart from the section between Rottweil and Sulz, for which, however, doubling was under consideration, and may now have been carried out.

General Details

- GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
- LENGTH: 148.4 km. (92½ miles).
- TRACK:
 - Immendingen-Rottweil (37.6 km.), double.
 - Rottweil-Sulz (29.2 km.), single(?).
 - Sulz-Stuttgart (81.6 km.), double.
- MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
- MAXIMUM GRADIENT: 20 per mille (1 in 50).
- MINIMUM RADIUS OF CURVES: 300 m.
- TRACTION: Steam.
- MAXIMUM DISTANCE BETWEEN STATIONS:
 - 10.0 km. (6½ miles).
 - Horb 81.0 km.-Eutingen (Württ.) 91.0 km.
- ENGINE SHEDS: Rottweil. Stuttgart.
- MARSHALLING FACILITIES:
 - Horb (SY).
 - Stuttgart (Kornwestheim).
 - Stuttgart-Untertürkheim.
- WATERING FACILITIES: No details available.
- VEHICLE LOCUS: Marked with asterisk in text.
 - (a) Repair workshops at Stuttgart, also loco shed and marshalling facilities.

IMMENDINGEN TO STUTTGART

*136.6	..	Short tunnel.	Line curves NE.
137.1	..	Bridge over road.	
137.2	WILDPARK		Passenger station. Line curves ESE.
137.5	..		Line curves NE and crosses minor road.
138.0	..		
138.1	STUTTGART HESLACH		Halt. Line crosses minor road.
138.4	..	Road overbridge.	Line curves NW.
*138.7	..	Tunnel.	c. 1.2 km. long. Just before station.

Km.	Stations	Engineering works	Details and facilities
127.8	STUTTGART WEST	..	Line crosses minor road. Line curves sharply right and runs NE crossing several roads. c. 640 m. long.
*143.3	..	Tunnel.	Line crosses roads in town.
*145.0	..	..	J (facing) left, with connection to lines to Calw and Karlsruhe (Route 75) and Nürnberg.
145.4	..	Railway bridge.	Line curves sharply right.
145.8	..	Ditto	Over sidings to Nord goods station and to Rps.
*146.1	..	..	Over line from Stuttgart Hbf. to Stuttgart Nord.
		Railway bridge.	J (trailing) left, with lines from Calw; and Karlsruhe (Route 75); and Nürnberg.
			Line runs SW into station.
			Over line to main goods station.
*148.4	STUTTGART Hbf.	..	Main station. ES. Tbl (21-25 m.). W. Rps (Loco. and passenger and goods rolling stock). Electric sub-station, also power station for electric supply at Münster. MT: Untertürkheim, capacity 2,200 wagons per 24 hours. Also at Kornwestheim, capacity 4,800 wagons per 24 hours. For details of facilities at Stuttgart, see Amendments to pages 101, 111, and 112 of I.S.T.D./C/317; and for illustrations, Plans 33-33g.
197.7	HEILBRONN	Routes 75 and 77.	
325.0	WÜRZBURG	Routes 75, 77, and 99.	

ROUTE 113

HORB-TÜBINGEN-REUTLINGEN-PLOCHINGEN (STUTTART)

General Description

Providing a route between Horb and Stuttgart alternative to Route 114, the line runs ST 20, along the Neckar valley to Tübingen, J for the ST line from Sigmaringen.

The line runs DT electrified from Tübingen and at Kirchentellinsfurt (385 km.) deviates from the Neckar, proceeding along the valley of its tributary the Echaz to serve the important town of Reutlingen, J for a cross country branch line to Scheßlingen on the Tuttlingen-Ulm line (Route 116), and from Reutlingen crosses fairly hilly country to rejoin the Neckar at Neckartallingen and to follow the right bank of the river to Plochingen.

At Plochingen, the line crosses the R. Fils and joins the main DT electrified line Ulm-Stuttgart (R 112/120).

The proposed junctions are at H. with the main line from Ulm to Stuttgart (R 112/120) at Tübingen with the ST line from Sigmaringen, and at Reutlingen with the branch line to Scheßlingen. The line is to be built from H. to Tübingen, and from Tübingen to Reutlingen, and from Reutlingen to Plochingen. The line is to be built from H. to Tübingen, and from Tübingen to Reutlingen, and from Reutlingen to Plochingen.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 80.8 km. (50½ miles).
3. TRACK:
 - Horb-Tübingen Hbf (31.7 km.), single.
 - Tübingen Hbf-Plochingen (80.8 km.), double.
4. MAXIMUM PERMISSIBLE AXLE LOAD:
 - Horb-Tübingen, 18 metric tons.
 - Tübingen-Plochingen, 20 metric tons.
5. MAXIMUM GRADIENT: 10 per mille (1 in 90).
6. MINIMUM RADIUS OF CURVE: 145 m.
7. TRACTION:
 - Horb-Tübingen Hbf, steam.
 - Tübingen Hbf-Plochingen, electric.
8. MAXIMUM PASSENGER TRAIN SPEED:
 - Horb-Tübingen, 40 km/h.
 - Tübingen-Plochingen, 40 km/h.

10. MAINTAINING FACILITIES:

Horb. Stuttgart (Route 82).

11. WATERING FACILITIES: As in 9 above. No other details.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Locomotive sheds as in 9 above.

(b) Junctions at Horb, Tübingen (31.7 km.), Reutlingen (46.1 km.) and Plochingen (78.8 km.).

(c) Tunnel (42.6 km.).

(d) Bridges at 7.4, 17.9, 16.6, (Neckar) 17.6, (viaduct over Neckar) 31.9, 36.9, 37.9, 40.2 (viaduct), 42.6, 54.9, 61.7, 75.3 and 79.5 km.

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
Horb-Tübingen	12-16	350
Tübingen-Plochingen		
Steam	48	350
Electric	60	500

Distance from Horb

Km.	Stations	Engineering works	Details and facilities
81.0	IMMENDINGEN	Route 114.	
0	HORB	..	SER. Wb (32 t). Cr. (5 t). SY. ? ES. At station J (facing) left with s.o. line to Herrenburg and Stuttgart (Route 114). Line follows south bank of R. Neckar to 16.6 km. Line runs NE.

ROUTE 116

TUTTLINGEN-SIGMARINGEN-HERBERTINGEN-ULM

General Description

Connecting with Route 114 at Tuttlingen and Route 82 at Ulm, this ST line provides an important cross country service from SW Baden area (Rust, Freiburg and Konstanz) to the main W-E line at Ulm.

The line follows the valley of the Danube from Tuttlingen to Ehingen, whence it proceeds along the valleys of its tributaries, the Schmied, the Ach, and the Blau; gradients are not therefore severe, but from Ehingen to Schelklingen the tendency will be for the gradient to be a rising one, the peak being at Schelklingen where it crosses from the valley of the Schmied to the valley of the Ach.

Several important bridges are encountered particularly from Tuttlingen to Ehingen over the Danube, and one long one at Plochingen (13.0 km.) over the Aach and R. Filz.

There are no tunnels at Tuttlingen and the line is not a rack section. The line is a single track line with a maximum speed of 100 km/h.

and at Schelklingen with the ST branch line from Reutlingen, which involves a rack section in crossing the Rauhe Alb.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 135.0 km. (83½ miles).
3. TRACK:
 - Tuttlingen-Ulm-Sölingen, single.
 - Ulm-Sölingen-Ulm Hbf, double.
4. MAXIMUM PERMISSIBLE AXLE LOAD:
 - Tuttlingen-Mengen, 16 metric tons.
 - Mengen-Schelklingen, 20 metric tons.
 - Schelklingen-Ulm-Sölingen, 18 metric tons.
 - Ulm-Sölingen-Ulm Hbf, 20 metric tons.
5. MAXIMUM GRADIENT: 2.5% (1 in 40).
6. MAXIMUM CURVE: 100 m. (328 ft.).
7. TRACKS: 1.
8. MAXIMUM WAGON LENGTH: 12.5 m. (41 ft.).

9. ENGINE SHEDS: Ulm.
 10. MARSHALLING FACILITIES: Ulm.
 11. WATERING FACILITIES: No details.
 12. VULNERABLE POINTS:
 (a) Marshalling and locomotive facilities at Ulm.
 (b) Junctions at Tuttlingen, Inzigkofen (36.3), 46.1 and 51.9 km., Herbertingen, Schelllingen and Ulm.

- (c) Bridges at 0.6, 1.5, 9.7, 13.0, 13.9, 14.9, 16.8, 19.1, 31.2, 31.9, 32.6, 33.7, 35.3, 41.8, 42.6, 47.2, 48.3, 51.6, 70.5, 77.6, 82.4, 112.7, 117.0, 118.0, 119.2 and 134.2 km.
 (d) Tunnel at 15.0 km.

13. CAPACITY:

Trains per day Net train load tons
 each way military stores
 (Throughput capacity) 12-16 350

Distances from Tuttlingen

ROUTE 117

RADOLFSZELL-FRIEDRICHSHAFEN-AULENDORF-ULM

General Description

Linking up with Route 112 (Offenburg-Konstanz), this line provides the main service from Konstanz and Friedrichshafen to Ulm, where it connects with Route 82, and Stuttgart.

From Radolfzell, J for Konstanz, the line runs N through slightly hilly country to Stahringen when it crosses the delta of the Stockacher-Aach to run along the N shore of Lake Konstanz to Oberuhldingen, where it deviates inland to Friedrichshafen.

From Friedrichshafen the line runs N and DT along the valley of the Schömen to its source just N of Aulendorf, when it crosses into the Riss valley to the rivers confluence with the Danube at Erbach, whence it follows the Danube to Ulm.

Gradients are slight and have a tendency to rise to Aulendorf and thence fall to Ulm (see Plan 52).

Principal junctions are at Radolfzell, for Konstanz, Friedrichshafen for Lindau (Route 117a), Aulendorf for ST lines W to Herbertingen and E to Memmingen, and at Ulm for the Stuttgart-München main line.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.

2. LENGTH: 152.6 km. (101 miles).

3. TRACK:

Radolfzell-Stahringen (8.0 km.), double.
Stahringen-Friedrichshafen (50.9 km.), single.
Friedrichshafen-Ulm (103.7 km.), double.

4. MAXIMUM PERMITTED AXLE LOAD:

Radolfzell-Oberuhldingen-Mülhofen
(33.5 km.), 20 metric tons.

Oberuhldingen-Mülhofen-Mimmenhausen-
Neufrach (33.4 km.), 18 metric tons.
Mimmenhausen-Neufrach-Ulm, 20 metric
tons.

5. MAXIMUM GRADIENT: 10 per mille (1 in 100) (see Plan 52).

6. MINIMUM RADIUS OF CURVES: 299 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

7.1 km. (4½ miles).
Between Radolfzell and Stahringen.

9. ENGINE SHEDS:

Radolfzell. Friedrichshafen. Ulm.

10. MARSHALLING FACILITIES: Ulm.

11. WATERING FACILITIES: See 9 above. No other details.

12. VULNERABLE POINTS:

(a) Locomotive sheds and marshalling yards given in 9 and 10 above.

(b) Junctions at Radolfzell, Friedrichshafen, Aulendorf and Ulm.

(c) Bridges at 12.2, 35.3, 40.2, 65.9, 73.2, 75.4, 145.6 and 150.2 km.

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
Radolfzell- Friedrichshafen (throughout)	12-16	350
Friedrichshafen-Ulm	48	400

Distances from Radolfzell

S of 1st: 3 DES c. 650 m. long, connected at W end to storage sidings, one with road access, one with connection at E end to turntable c. 13 m. diameter, one serving c. 12 DES each c. 140 m. long, most with road access and small spur siding to SER. Further S of end 2 DES c. 250 m. long, possibly for passenger siding only, with connection to central established siding S of yard.

Km.	Stations	Engineering works	Details and facilities
			Loco Depot: In junction triangle formed by Stuttgart and Schellkingen lines—a ES ($\frac{1}{2}$ RH) each with holding capacity 20-25 locos, with turntables c. 18 m. diameter. Workshops attached—access to depot from S. A further depot exists in MY, comprising a ES ($\frac{1}{2}$ RH). Capacity 20-25 locos each, with a Tbl (22 m.). Coal road with wet ash pit E of depot extending along MY; length of stage c. 250 m., length of ash pit c. 300 m. Marshalling Yard: Alongside and S of Schellkingen line. Reception and Departure Roads: N of loco depot, c. 10 LS c. 1,100 m. long. Marshalling Sidings: S of loco depot, c. 20 LS 600-750 m. long. Soring Sidings: W end of marshalling sidings, c. 10 LS c. 210-300 m. Storage Sidings for Goods Yard: c. 12 LS c. 300 m. long. Reception and Departure Sidings: W end, 5 LS c. 600 m. long, with a further group of newly constructed sidings to the W, comprising c. 10 LS, c. 600-900 m. For location diagram of facilities at Ulm, see <i>Plan 41</i>, and for air photographs, <i>Plan 41a</i>, and <i>Appendix 3 of Report C/317</i>.

ROUTE 117A FRIEDRICHSHAFEN-LINDAU

General Description

This line runs along the N side of Lake Konstanz and joins the Radolfzell-Friedrichshafen-Ulm line (Route 117) to the Lindau-Augsburg line (Route 120). There are no gradients of any consequence.

Principal junctions: Friedrichshafen for the Radolfzell-Friedrichshafen-Ulm line; Lindau for the DT s.o. Lindau-Augsburg line (Route 120), and the ST s.o. line to Bregenz.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 23.9 km. (14½ miles).
3. TRACK: Single.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 8 per mille (1 in 125).
6. MINIMUM RADIUS OF CURVES: 300 m.
7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

Friedrichshafen-Erikskirch 5.8 km. (3½ miles).

9. ENGINE SHEDS:

Lindau. Friedrichshafen.

10. MARSHALLING FACILITIES:

Friedrichshafen (SY). Lindau (SY).

11. WATERING FACILITIES:

Lindau. Friedrichshafen.

12. VULNERABLE POINTS:

- (a) Locomotive sheds at Friedrichshafen and Lindau.
- (b) Repair shops at Friedrichshafen.
- (c) Junctions at Friedrichshafen and Lindau.
- (d) Bridges at 1.5, 6.3 and 10.8 km.

13. CAPACITY:

<i>Trains per day</i>	<i>Net train load tons</i>
<i>civil use</i>	<i>military stores</i>
12-16	350

Distance from Friedrichshafen

Km.	Stations	Engineering works	Details and facilities
250.6	BREITEN	Routes 117, 82, 70.	Passenger and goods station. Repair shops (loco and electric railcars). SER. Wb (40 t). Cr (10 t). ES. Tbl. W. <i>Passenger Station:</i> 3 platforms (2 island) up to 250 m. long. 6 through tracks. Bays at each end of single-faced platform for local trains. <i>Repair Shops:</i> Situated N of station—loco and electric railcars; extensive works fitted with traverser and equipped for heavy repairs; served by trailing connection from W end of shunting yard. <i>Loco:</i> ES—exact location unknown but probably, in addition to RpS, a rectangular shed exists N of harbour station. Tbl (25 m.) at W end of station, S of RpS. Tbl (25 m.) at E end of station in triangle formed by connection to harbour station. Also in triangle, water tower and coal stage. <i>Shunt Yard:</i> N of line, and immediately E of station. 3 LS c. 800 m. long. 3 LS c. 800 m. long. 3 LS c. 350 m. long. <i>Goods Station:</i> SER. Wb (40 t). Cr (10 t). 3 LS for storage c. 550 m. long. 1 LS (350 m.) serving goods shed (200 x 25 m.), together with 2 DES. 2 DES (c. 450 m.) with access from E end of yard and 2 short spurs at W end, giving 4 tracks in all, serving SER. Private siding connections to industrial establishments N side of town, including gas works, Maybach Motorenbau works, and Luftschiffbau works. <i>Harbour Station:</i> Served by connection E end of main station. Terminus station with 2 platforms (1 single-faced). Goods yard adjoining comprises 3 DES (c. 200 m.); 3 DES (c. 100 m.); 2 DES (c. 75 m.). Line crosses some roads in the town. J (facing) right with connection to harbour station. J (facing) left with DE 100 ft. to ULM, and with co. standard gauge light railway to Oberlin (c. 10 km.).

		Causeway over Bodensee immediately after trailing connection.	c. 330 m. long.
23.9	LINDAU Hbf. (BODENSEE)	..	Station facilities. Passenger station: 4 island platforms 300 m. long. Loco Depot: W of passenger station. ES 1 RH, depth 27 m., stabling capacity c. 25. Tbl (27 m). W. Served by 2 LS (each 225 m.), from carriage sidings. Carriage Sidings: SW of passenger station, 12 DES each 230 m. long, connection to Loco Depot. Goods Yard: NE of passenger station, c. 5 DES each 160 m. long. Wb (40 t). Storage Sidings: NW of passenger station, c. 8 LS each 225 m. long. (From Lindau Hbf. to Bregenz German-Austrian loading gauge is permissible only to height of 1,500 mm. for hay, straw and other easily inflammable goods). At Lindau, inter-connection with Bodensee (Lake Konstanz) steamship's services.

ROUTE 118

KEMPTEN-MEMMINGEN-NEU ULM

General Description

Connecting with Route 120 (Lindau-Augsburg) at Kempten and Route 82 at Ulm, this route forms part of the main line from Lindau and Switzerland to Frankfurt via Karlsruhe, Heidelberg and Mannheim.

The line runs in a northerly direction following the valley of the R. Iller throughout, and gradients are consequently not of a serious nature.

The principal junctions are at Kempten with the Lindau-Augsburg line (Route 120), at Memmingen with the ST main line to Büchloe and München (Route 119), and the ST branch line from Aulendorf (on Route 117), and Herpitz (on Route 120), and at Neu Ulm with the main München-Stuttgart line (Route 82).

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 85.0 km. (53½ miles).
3. TRACK: Single.
4. MAXIMUM PERMISSIBLE AXLE LOAD:
Kempten (Allgau) Hbf-Memmingen, 20 metric tons.
Memmingen-New Ulm, 18 metric tons.
5. MAXIMUM GRADIENT: 7 per mille (1 in 140).

6. MINIMUM RADIUS OF CURVES: 200 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

8.9 km. (Kempten-Herping).

9. ENGINE SHEDS:

Kempten. Memmingen. Neu Ulm.

10. MARSHALLING FACILITIES:

Kempten. Memmingen. Ulm.

11. WATERING FACILITIES:

Kempten. Memmingen. Ulm. Neu Ulm.

12. VULNERABLE POINTS: Marked with asterisk in text.

(a) Marshalling facilities and locomotive sheds as in 9 and 10 above.

(b) Repair shops at Neu Ulm.

(c) Junctions at Kempten (0.4 and 0.8 km.), Memmingen (34.1 and 36.6 km.), Neu Ulm (84.4 km.).

(d) Electric transformer station.

(e) Bridges at 0.7 km. (Iller), 38.8 km.

13. CAPACITY:

Trains per day each way	Net train load tons military stores
12-16	350

ROUTE 119

MEMMINGEN-BUCHLOE-MÜNCHEN

General Description

Together with Route 118, the section Memmingen-Buchloe provides a ST alternative route from Kempten to Buchloe and from Buchloe the line continues to München providing, together with Route 120, the main line service from Lindau and Zürich to München, Leipzig and Berlin.

The line proceeds in an easterly direction crossing the general watershed to the N and includes bridges over several rivers, the most important being those over the Günz, Mindel, Wertach, Lech and Amper.

In addition to the important connections at Memmingen, Buchloe and München, junctions at Mindelheim with the line to Günzburg and at Turkheim, Kaufering and Geltendorf with the lines to Gessertshausen, Bobingen and Mering, provide less important branch line services.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 113.1 km. (70½ miles).
3. TRACK:
 - Memmingen-Buchloe (46.1 km.), single.
 - Buchloe-München (113.0 km.), double.
4. MAXIMUM PERMISSIBLE AXLE LOAD:
 - Memmingen-Buchloe, 17 metric tons.
 - Buchloe-München, 20 metric tons.

5. MAXIMUM GRADIENT: 12 per mille (1 in 80).

6. MINIMUM RADIUS OF CURVES: 292 m.

7. TRACTION: Steam.

8. MAXIMUM DISTANCE BETWEEN STATIONS:
11.8 km. (7½ miles).

9. ENGINE SHEDS:

München (Pasing). Memmingen.

10. MARSHALLING FACILITIES:

Memmingen (SY). München Laim.

11. WATERING FACILITIES:

München. Memmingen.

12. VULNERABLE POINTS:

- (a) Marshalling facilities and locomotive depots as in 9 and 10 above.
- (b) Junctions at Memmingen, Buchloe (45.3 and 46.9 km.) and München.
- (c) Electric sub-station at München (Pasing).
- (d) Bridges at 2.6, 7.6, 10.1, 10.8, 18.5, 21.8, 24.4, 25.7, 39.9, 53.1, 59.2, 70.9 and 89.4 km.

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
Memmingen-Buchloe	12	300
Buchloe-München	48	300

ROUTE 120

LINDAU HBF-KEMPTEN-BUCHLOE-AUGSBURG

General Description

This line is DT and s.o. throughout and forms part of the main line from Zürich (Switzerland) to Augsburg and Nürnberg. The gradient is principally a rising one to Günzach and there are many sharp curves on this part of the line. From Oberstauffen to Immenstadt the course of the R. Ach and the shores of the Alp See are followed.

From Günzach to Augsburg the gradient is principally a falling one. At Kaufbeuren the R. Wertach is crossed and the line follows the valley of the river to Augsburg. At Kempten the R. Iller is crossed.

Principal junctions are at Lindau, with the ST s.o. line from Friedrichshafen and with the ST line from Feldkirch and Innsbruck (s.o. from Bregenz and electrified from Bregenz to Innsbruck). Kempten J for the ST s.o. line from Neu Ulm. Buchloe J for DT s.o. line to München and for ST s.o. line from Memmingen. Augsburg for the DT electrified line from Stuttgart to München, the DT electrified line from Donauwörth, and the ST s.o. line from Landshut.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 191.8 km. (119½ miles).
3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT:
Lindau-Buchloe, 12½ per mille (1 in 80).
Buchloe-Augsburg, 8 per mille (1 in 120).
6. MINIMUM RADIUS OF CURVES:
Lindau-Buchloe, 292 m.
Buchloe-Augsburg, 510 m.
7. TRACTION: Steam.
8. MAXIMUM DISTANCE BETWEEN STATIONS:
9.9 km. (6¼ miles) between Wildpoldsried (9.9 km.) and Günzach (10.9 km.).
9. EXISTING SITES:
Lindau. Kempten. Augsburg.

RAILWAYS

10. MARSHALLING FACILITIES: Augsburg.

11. WATERING FACILITIES:

Lindau. Kempten. Augsburg.

12. VULNERABLE PORTS: Marked with asterisk in text.

(a) Marshalling and locomotive facilities referred to in 9 and 10 above.

(b) Junctions at Lindau (1.2, 1.5 and 2.3 km.), Hergatz (24.0 km.), Kempten (88.4,

99.9 and 91.2 km.), Kaufbeuren (133.7 km.), Buchloe (152.1 and 153.7 km.), and Augsburg (171.1 km.).

(c) Bridge over R. Ach at 54.0 km., and R. Iller at 92.8 km.

13. CAPACITY:

Trains per day
each way
48Net train load tons
military stores
310-410

Distance from Lindau

Km.	Stations	Engineering works	Details and facilities
0	LINDAU Hbf		Passenger Station: 4 island platforms c. 300 m. long. Carriage Sidings: SW of passenger station. 12 DES, c. 21.5 m. long, with connections to loco depot. For details of Augsburg, see Route 82. J for Routes 82, 85, 88, to Stuttgart, Treuchtlingen, and Ingolstadt. Line continues to Stuttgart and Karlsruhe as Route 82.

ROUTE 121 LINDAU-INNSBRUCK

General Description

The line leaves the island on which Lindau is situated, crosses part of the Bodensee (Lake Konstanz) by a causeway and after reaching the mainland keeps close to the shore until reaching Bregenz. It then runs S through the wide Rhine valley, intersected by many streams, to Feldkirch. Here it turns SE to follow the narrower valley of the R. Ill, with rising gradients, to Bludenz. At Bludenz it leaves the R. Ill and follows the valleys of the Alfenz, Rosanna and Senna to Landeck, where the broader valley of the R. Inn, with easier gradients, is joined and followed to Innsbruck. Severe gradients, sharp curves, numerous bridges and several tunnels—including the famous Arlberg Tunnel—are met with in the Bludenz-Landeck section. The line crosses the 700 m. contour-line just after entering the Alfenz valley, passes under the 1,800 m. contour level in the Arlberg tunnel and descends to river level at Landeck.

Apart from the causeway over the Bodensee (6,350 m. long) the main bridges are (i) over Bregenzer Ach at 13.2 km., (ii) over R. Ill, at 40.3 km., (iii) over R. Ill, at 60.7 km., (iv) over Trübsen Gorge, at 123.7 km., (v) over R. Inn, at 130.7 km., and (vi) over Obere Ache, at 130.7 km.

There are tunnels at 41.5 km., 42.5 km., 43.5 km., at 70.3 km., 71.0 km., 72.0 km., 73.0 km., at 107.3 km., 108.0 km., 109.0 km., and at 114.3 km. (total 1,000 m. long), and at 130.7 km. (Arlberg Tunnel, 1,000 m. long).

Main junctions are at 1.2 km. (J with Route 120), at 11.1 km. (J with Bregenzerbahn, length 35.3 km.), at 13.6 km. (J with ST s.o. line to St. Margrethen and Switzerland), at 45.5 km. (J with ST electrified line to Swiss frontier and St. Gallen), at 202.3 km. (J with Route 122), and at 203.8 km. (J with Route 123a).

The line is ST throughout, being s.o. from Lindau to Bregenz, and electrified from Bregenz to Innsbruck. Sub-stations are at Feldkirch, Flirsch, Roppen and Zirl.

General Details

1. GAUGE: 1,435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 204.4 km. (126½ miles).
3. TRACK: Single.
4. MAXIMUM PERMISSIBLE AXLE LOAD:
Lindau-Bregenz, 20 metric tons.
Bregenz-Innsbruck Hbf, 13 metric tons.
5. MAXIMUM GRADIENT: No details, but will be severe after leaving Feldkirch. The ruling gradient between Bludenz and Langen is 31 per mille.
6. MINIMUM RADIUS OF CURVE: 250 m.
7. LOCATION:
Lindau-Bregenz, 20 km.
Bregenz-Innsbruck Hbf, 13 km.
Innsbruck, 13 km.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

(In Lindau-Bregenz section, 2.8 km.

(On Breyenz-Innsbruck section, 9.9 km. (ex-
cluding Arlberg Tunnel where track is
double)

9. Examine the:

Lindau.	Bregenz.	Landeck.
Kudenz.	Innsbruck.	

10. MARSHALLING FACILITIES: Lindau. Innsbruck.

II WATERING FACILITIES:

Lindau.	Dannofen.	Pians
Bludenz.	Langen.	Landeck.
Bratz.	St. Anton.	Imst.
Hintergasse.	Flirsch.	Sils.
Dalass.	St. Rengen.	Zirl.
		Innsbruck.

12. VULNERABLE POINTS: Marked with asterisk in
text.

(e) Locomotive and marshalling facilities given in a and to above.

(b) Repair shops at Innsbruck W and Bludenz.

(c) Sub-stations at Feldkirch (47.0 km.), Dornfen (88.0 km.), Flirsch (116.8 km.), Roppen (154.0 km.), and Zirl (189.9 km.).

(d) Bridges at 13.2, 49.5, 60.7, 123.7, 132.7 and 146.7 km.

(e) Tunnels at 47.7, 76.7, 80.1, 80.7, 81.6, 82.1, and 93.7 km. (Arlberg).

(N) Junctions at 1.2, 45.5, 202.3 and 203.8 km.

13. CAPACITY:

	<i>Trains per day each way</i>	<i>Net train load tons military stores</i>
With electric traction	12-16	300
With steam traction	10-12	250

Distance from Lindau

ROUTE 122

INNSBRUCK-PARTENKIRCHEN-WEILHEIM-MÜNCHEN

General Description

The line crosses to the left bank of the Inn soon after leaving Innsbruck, runs W, and climbs steadily from 600 m. to the Martinswand tunnel. Emerging from this, it climbs steeply to another tunnel (1,000 m. contour-level). From this second tunnel it continues climbing to Reith, where it turns N and follows a succession of small valleys to Mittenwald. Between Seefeld and Scharnitz, on this section, the line reaches the 1,300 m. contour-line, and then descends to 1,000 m. At Mittenwald the line swings W, following the wide Isar valley to Partenkirchen. Here it turns N, following the Louach valley to Murnau. From this point the line runs through more open country, passing the Staffel See and Wurm See en route. The main road is followed closely from Innsbruck to Murnau.

This line forms an alternative to the Innsbruck-Kufstein-Rosenheim route (Route 123). Track is single to Tutzing, and double from Tutzing to München. Line is electrified throughout.

Main junctions are at Innsbruck (J with DT electrified line from Brenner, Route 123a), Innsbruck W (J with Route 121), at 37.0 km. (J with ST electrified line to Reutte, whence ST co. line to Kempten, Routes 113 and 120), at 103.2 km. (J with ST co. line to Pörsching, whence ST co. connections to Routes 117 and 120), at 105.6 km. (J with R 121 119), at Garmisch (double line to München), at 138.2 km. (J with DT dead-end electrified line to RPS at

Neuaußing), at 150.2 km. (J with Routes 119 and 82), and at 156.0 km. (J with Route 123).

Main bridges are at 2.3 km. (over R. Inn), at 152.3 km. (fly-over), and at 154.7 km. (bridge over multiple tracks).

There are several tunnels in the Innsbruck-Reith section, the main ones being at 11.0 km. (Martinswand, c. 2.5 km. long), and at 15.1 km. (tunnel c. 1.5 km. long, built on a N-S curve).

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 158.0 km. (98 miles).
3. TRACK:
 - Innsbruck-Tutzing (113.4 km.), single.
 - Tutzing-München Hbf (49.6 km.), double.
4. MAXIMUM PERMISSIBLE AXLE LOAD:
 - Innsbruck Hbf-Innsbruck Wbf, 18 metric tons.
 - Innsbruck Wbf-Scharnitz, 14 metric tons.
 - Scharnitz-München Hbf, 20 metric tons.
5. MAXIMUM GRADIENT:

ROUTE 123

KUSFTEIN-ROSENHEIM-MÜNCHEN

General Description

The line runs in a northerly direction to Rosenheim along the valley of the R. Inn, keeping close to the main road, and crossing the old Austro-German border at c. 3-1 km. from Kufstein. At Rosenheim it leaves the main road, and turns NE to München across high, open country on the 500 m. contour-level.

The line crosses several streams, but no important rivers. There is, however, an important bridge over a canalised stream just E of Rosenheim station (marked with asterisk in text), and a road overbridge W of station (also marked with asterisk).

Main junctions are at Rosenheim (with DT electric line from Salzburg; also J with ST s.o. alternative route to München via Holzkirchen; also J, with ST s.o. line to Mühldorf, and a light-railway connection with Westerdorf); at Grafing, J with ST s.o. line to Wasserburg, on Rosenheim-Mühldorf line (Route 109), and at München with Routes 82, 87, 106, 119 and 122.

This line together with Route 123a provides the main route from Italy to Germany via Innsbruck. An alternative route exists from Innsbruck via Partenkirchen (Route 122), but the track is single to Tutzing, and many serious gradients are to be expected.

A further alternative route to Rosenheim is afforded via St. Johann and Salzburg, Route 124, but again heavy gradients are likely to be encountered, particularly between Wörgl and St. Johann, and in addition, a kilometrage of 280-6 km. is entailed for the journey Wörgl-Rosenheim as against 47-3 km. by Routes 123a and 123.

General Details

1. GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
2. LENGTH: 99-2 km. (61½ miles).

3. TRACK: Double.
4. MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
5. MAXIMUM GRADIENT: 12 per mille (1 in 81).
6. MINIMUM RADIUS OF CURVES: 250 m.
7. TRACTION: Electric.
8. MAXIMUM DISTANCE BETWEEN STATIONS: 7-9 km.
9. ENGINE SHEDS:

Kufstein.	München-Ost.
Rosenheim.	München-Pasing.
10. MARSHALLING FACILITIES:

Wörgl.
Rosenheim (Kolbertmoor).
München-Ost, capacity 2,000.
München-Pasing, capacity 2,900.
München-Sud.
11. WATERING FACILITIES: As in 9 above.
12. VULNERABLE POINTS: Marked with asterisk in text.
 - (a) Locomotive and marshalling facilities given in 9 and 10 above.
 - (b) Junctions at 33-1, 38-0, 83-9, 89-1, 94-8 and 97-6 km.
 - (c) Repair shops at München (Pasing, Freimann and Neuaubing).
 - (d) Sub-stations at Rosenheim and München-Pasing.
 - (e) Bridges at 28-3, 33-9 and 92-9 km.
13. CAPACITY:

	Trains per hr. each way	Net ton load per military stores
With electric traction	60-72	100-300
With steam traction	48	100

ROUTE 123A

BRENNER-INNSBRUCK-WÖRGL-KUFSTEIN

General Description

The Brenner railway runs from München via Kufstein, Wörgl and Innsbruck to Bolzano, Trento and Verona. It is the shortest and most important supply route between Germany and Italy. It is DT (with the possible exception of the Kufstein-Wörgl section) and electrified throughout, but there is a change of system at Brenner from the Austrian standard of 15,000 volts A.C. to the Italian system. Electrification has considerably increased the capacity of the Austrian section of the line, which is built on a continuous upgrade from Innsbruck to Brenner, usually of 25 per mille.

Between Brenner and Innsbruck the line follows the narrow, winding and thickly wooded valley of the R. Sill, usually running on a shelf above the river. There is a loop E at St. Jodok. The Sill valley is also followed by the Brenner road, which often runs on the opposite side to the railway. Tunnels are frequent, though there is no tunnel at the pass itself, and there are several bridges over the R. Sill.

Marshalling is carried out at Innsbruck, as facilities at Brenner are limited. The small amount of level ground between Innsbruck and Brenner (and also between Brenner and Bolzano in Italy) leaves little room for loops, sidings and yards, and makes some of the station layouts rather cramped. This does not prevent the line's capacity being high, but the consequences of a block on the line from any cause for more than a few hours are likely to be felt as far N as München, and as far S as Verona, since there are so few sidings where trains could be held back.

At Innsbruck the line enters the Inn valley, which it descends for the remainder of its length. Between Innsbruck and Kufstein the valley has an average width of 1-2 km., with hills, often wooded, rising steeply beyond. This section of the Brenner route, in marked contrast to the section between Brenner and Innsbruck, has very easy gradients and comparatively few curves, usually of wide radius. The main engineering works are 3 large bridges over the Inn, the first of which occurs immediately N of Innsbruck, the second just W of Brühl (80.9 km.), and the last between Wörgl (98.5 km.) and Kufstein.

The only J of any importance occurs at Wörgl, whence runs a DT s.o. line WSW to Schwarzach-St. Veit and thence N to Salzburg (R. 122). At Wörgl R. 122 then turns NNE, still in the Inn valley. Kufstein is reached at 109.9 km., and the former Austro-German border is crossed at 112.2 km., the line continuing in a generally northerly direction in the Inn valley to Rosenheim (for München). There is some doubt whether the Wörgl-Kufstein section is still S.T. or some improved type of double-track line has been used.

General Details

- GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
- LENGTH: 109.9 km. (68½ miles).
- TRACK: Double, except between Wörgl and Kufstein, though this section may now have been doubled.
- MAXIMUM PERMISSIBLE AXLE LOAD: 20 metric tons.
- MAXIMUM GRADIENTS:
 - 25.5 per mille down between Matri and Patsch.
 - 2.5 per mille up between Schwaz and Jenbach.
- MINIMUM RADII OF CURVES:
 - 235 m. between Schafstau and Kufstein.
- TRACTION: Electrified (15,000 volts A.C. single-phase, 16½ cycles). Sub-stations at Matri, Solbad Hall and Wörgl, deriving power from Ruets and Achensee power stations, and Walchensee power station in Bavaria.
- MAXIMUM DISTANCE BETWEEN STATIONS:
 - 8.6 km. (5½ miles) (Matri-Patsch).
- ENGINE SHEDS:

Brenner (small shed for Italian locomotives).	
Innsbruck.	Wörgl.
Jenbach.	Kufstein.
- MARSHALLING FACILITIES:

Innsbruck.	Wörgl.
Normally no marshalling at Brenner.	
- WATERING FACILITIES:

Brenner.	Patsch.	Jenbach.
Gries.	Innsbruck.	Wörgl.
Steinach.	Solbad Hall.	Kufstein.
Matri.		
- VULNERABLE POINTS: Marked with asterisk in text.

Line especially vulnerable between Brenner and Innsbruck.

 - (a) Locomotive and marshalling facilities given in 9 and 10 above.
 - (b) Staffbach tunnel (7.6 km.), St. Jodok tunnel (9.3 km.), Mühlbach tunnel (25.3 km.), tunnel (29.0 km.), tunnel (33.8 km.), Berg Isel tunnel (34.0 km.), and short tunnel (3.5 km.).
 - (c) J at Wörgl.
 - (d) Bridge over R. Sill (15.1 km.), Bridge over Mühlbach (25.2 km.), Sonnenburg bridge over R. Sill (33.5 km.), Bridges over R. Inn (11.4, 80.5 and 101.9 km.). There are numerous other smaller tunnels and bridges, and the line frequently runs on a narrow shelf high above the valley of the R. Sill whose course it follows.

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
With electric traction	72	720
With steam traction		
Brenner- Innsbruck	48	250-300
Innsbruck-Wörgl- Kufstein	72	500

Distance from Brenner

14. SIGNALLING: Block working with block instruments.

15. TRAIN DISPATCHING: In force; control centres at Innsbruck and Wörgl.

16. REPAIR SHOPS: Innsbruck W.

Km.	Stations	Engineering works	Details and facilities
0.0	BRENNER Alt. 1,370 m., mg. 25 down, mrc. 250 m.		Frontier station. SR. W. 8 LS (900 m.) E of station, 2 serving covered platforms 280 m. long (probably for customs examina- tion of freight). DES 220 m. long at each end, between these 2 LS. Several DES on each side of main line at S end with access from N. Turn- ing by means of the "Brenner Star"—an elaborate turning tri- angle. The triangle lies NW of the station and there is a small local goods yard and shed adja- cent with 2 DES (150 m.) approached from N; also prob- ably Tbl for electric locos. Line runs N from Brenner making a continuous descent to Inns- bruck. Beyond the bridge over the Sill Bach at 0.8 km. the line closely follows the thickly- wooded narrow valley of that river all the way to Innsbruck (except for a sharp loop E at St. Jodok). The Sill valley is also followed by the Brenner road, frequently on the opposite bank of the river to the railway. The railway usually runs on a shelf well above the river. Italo-Austrian frontier.

35.9	..	End of line out. Bridge over road.	c. 100 m. long. Line N. to the end of the line at Isch, 3 km. to the SE, thence aerial railway to the Pustel Koch.

Km.	Stations	Engineering works	Details and facilities
36.1	..	Bridges over arm of R. Sill.	two could easily be joined up to form a goods loop by-passing the passenger station.
37.0	INNBRUCK Hbf. Alt. 582 m., mg. 4 down, mrc. 280 m.	..	SER. Wh (35 t). Cr (20 t). W. Passenger station: 3 platforms (2 island), 5 through platform tracks and 3 through roads. 4 bay platform tracks at S end, also 4 or 5 DES serving goods shed. A fourth through road serves the main goods shed. Loco Depot: ES. S of station, between running roads and MY: 72 electric locos maintained in 1935, and 375 staff employed. 2 roundhouses of 21 covered tracks each, served by 2 tbls, not of equal size. Southern shed and half northern shed wired for electric locos, other half for steam locos. Coal stacks and 2 coaling platforms, served by 3 tracks, at S end of depot. Marshalling Yard: E of station on left bank of R. Sill: 17 LS (300-600 m.) running to 2 shunting necks at S end, 2 serving loading platforms c. 250 m. long and 2 serving transshipment sheds along E side of yard with SR c. 150 m. long. MY connected at N end with main line by a DT connection with bridge over goods yard. Goods Station: Immediately E of passenger station between through roads and MY: 2 sheds and several DES, 7 short DES with shed and road access NE of MY. Goods station and shunting yard at Innsbruck Westbf on the Arlberg line (Route 121). Loco and Wagon RAS: Unidentified sheds N of ES, S of goods station. These formerly consisted in part of wagon repair shops and had a traversing table at either end, but the latter appears to have been removed (July, 1943). J (trailing) with— (1) ST electrified line W to Feldkirch, Bregenz and Lindau (Arlberg line, Route 121). (2) ST electrified line W and N to Scharnitz branching from Route 121 at Innsbruck Westbf. Line runs N from Innsbruck, then curves ENE, closely following the N bank of the Inn, whose valley (average width 1-2 km.) the line descends for remainder of its length. Maximum, 1,200 m. long, 175 miles. The viaduct starts at Mitten, curve, immediately N of the Hauptbahnhof, and runs to the R. Lauterbach NE of Innsbruck. A section of the line is now being reconstructed.

Km.	Stations	Engineering works	Details and facilities
112.2			Line crosses the former Austro-German border and continues in a generally northerly direction, in the valley of the Inn, to Rosenheim (for München). Line continues to München as Route 123.

ROUTE 124

WÖRGL-ST. JOHANN-SALZBURG-ROSENHEIM

General Description

Connecting with Route 123 (Brennero-Kufstein) this line forms the main route from Italy to Salzburg, where it connects with the main lines from Vienna and Linz, before proceeding W to Rosenheim and München.

The principal junctions are at Wörgl with Route 123 direct line from Innsbruck to München, at Schwarzach-St. Veit with the ST electric line from Villach (Route 123), at Salzburg with the main line from Vienna and Linz, and at Rosenheim, where it once more joins Route 123.

The line is DT and electrified throughout and passes through mountainous country, giving a maximum gradient of 25 per mille up and 22.5 per mille down. Double heading is required where these gradients occur, i.e. in the sections St. Johann-Hochfilzen, and Hochfilzen-Saalfelden. See Plan 51 giving profile of line.

The line is particularly vulnerable from the point of view of tunnels and bridges, the most important of the latter being between Bruck-Fusch and Salzburg where the line follows the R. Salzach.

General Details

- GAUGE: 1435 mm. (4 ft. 8½ in.). Standard.
- LENGTH: 280.6 km. (174½ miles).
- TRACK: Double.
- MAXIMUM PERMISSIBLE AXLE LOAD:
Wörgl-Salzburg Hbf, 18 metric tons.
Salzburg Hbf-Rosenheim, 20 metric tons.
- MAXIMUM GRADIENTS:
25.0 per mille up (see Plan 51).
22.5 per mille down.
- MINIMUM RADIUS OF CURVES: 100 m. (see Plan 51).
- TRACTION: Electric, 15,000 volts A.C. 16½ cycles, single-phase.

(8) MAXIMUM DISTANCE BETWEEN STATIONS:

9.9 km. (6¼ miles).
Sulzau 153.5 km.-Golling-Abtenau 163.4 km.

9. ENGINE SHEDS:

Wörgl. Freilassing.
Bischofshofen. Rosenheim.
Salzburg.

10. MARSHALLING FACILITIES:

Wörgl. Freilassing.
Salzburg. Rosenheim.

11. WATERING FACILITIES:

Wörgl. Schwarzach-St. Veit.
Kitzbühel. Bischofshofen.
Hochfilzen. Salzburg.
Saalfelden. Freilassing.
Bruck-Fusch. Rosenheim.

12. VULNERABLE POINTS: Marked with asterisk in text.

- Marshalling and locomotive facilities given in 9 and 10 above.
- Junctions at Wörgl, Schwarzach St.-Veit, Salzburg and Rosenheim.
- Power station at Saalbach near Bad Reichenhall.
- Sub-stations at Wörgl, Kitzbühel, Saalfelden, Schwarzach-St. Veit, Golling and Rosenheim.
- Tunnels at 12.7, 14.7, 109.9, 119.9, 123.7 and 159.4 km.
- Bridges at 20.3, 33.2, 83.5, 87.1, 97.4, 99.4, 113.7, 117.6, 126.8, 140.7, 159.3, 194.4, 226.4 and 278.0 km.

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
With electric traction	48	400
With steam traction	36	300

179.1	PARICH (RENNING.)	2 road overbridges.	Passenger halt. Line crosses minor road. Carrying minor roads.
182.8	GNIBL (SALZBURG Vsp.)	Fly-over. Road overbridge.	MY. For details see Salzburg 184. Wb (36 t). J (facing) right, with a short DE spur. J (trailing) left, with connection to Berchtesgaden line. J (facing) left to MY and to DT line to Seindorf for Linz and Vienna. (This line is electrified from Salzburg to Attnang.) Line passes under Seindorf line. Line curves sharply left. J (facing) right, with ST s.o. line to Lamprechtshausen. J (trailing) right, with DT line from Seindorf.
192.2	SALZBURG Hbf.		SER. Wb (80 t). Cr (15 t). MY. ES. Tbl. W. Rps. 1 for narrow-gauge ST s.o. line to Ischl and Mondsee. ST electrified line to Berchtesgaden runs from an independent station NW of main station and is connected by 2 through tracks with station of Lamprechtshausen line. Main Passenger Station: 1 probable through platform road, adjoining main station building to W of main line. E of above, large island platform with 4 terminal bays at either end. 12 through tracks. E of passenger station: c. 8 DES with access from S, 183-366 m. long, 6 of which appear to be used for storage of passenger stock and 2 of which have loading facilities and good road access from E. S of passenger station, on W side: 3 DES, 320 m. long, with access from S, used for storage of passenger stock and for locomotives awaiting trains. Goods Depot: (a) N of passenger station: c. 13 DES with access from N 90-320 m. long, 5 of which have probable SR. Shed 75 x 12 m. and 3 smaller sheds. Good road access from SW. (b) NE of passenger station: 3 LS, 730 m. long and c. 7 DES with access from N 183-640 m. long, one with ER. 2 of the LS serve sheds 333 x 20 m. and 134 x 18 m. with SR. 2 of the DES serve shed 61 x 18 m. with SR. Good road access from SE. Lamprechtshausen: (a) S of passenger station: 18 SR type with 4 tracks, served by 1 LS and 2 with access from SW. The 18 DES are arranged

Km.	Stations	Engineering works	Details and facilities
			to be used for open works.
			To the S of station, average length 224 m. with one from SW, 5 of which have low platforms adjacent, and which may be used for servicing of electric locomotives or possibly of carriage stock.
			(b) N of passenger station: (steam tracks not electrified) ES (RH type) with c. 16 roads and 4 short spurs outside served by Tbl (24 m.). Access is from NE. 4 through tracks leading to Tbl. 2 short DES alongside. Coaling. RPS shops adjoining on NE side.
			Less Depot: (steam and electric) E of main station and SW of MY, with access from N. ES (RH) with c. 16 roads served from Tbl (18 m.). Proba. 7 used for steam locos. Coaling. Rectangular shed 116 m. x 27 m. adjoins RH on NE side. It is served by 3 roads. It is probably used for electric locos capacity c. 16.
			Marshalling Yard: 26 LS, average length c. 777 m. A further group of 9 LS average length c. 366 m. and 1 DES adjoining, situated NE of the yard and terminating at the N end in a shunting spur which extends for c. 366 m. parallel to the line from the main station, but at a higher level. Shunting probably by gravity from the N end.
			RPS is reached by facing connection left off the line to the station from Lamprechtshausen c. 366 m. before reaching the station.
			Trailing connection c. 640 m. N of station for ST spur from exchange sidings with main railway system.
			RPS consists of L-shaped shed (overall dimension 97 x 72 m.) served by c. 13 roads.
			Line passes over ST electrified line to Berchtesgaden.

ROUTE 123

JESENICE (ASSLING)/TARVISIO (TARVIS)-VILLACH-SPITTAL MILLSTÄTTERSEE-SCHWARZACH ST. VEIT

General Description

Note km. distances are given from Jesenice.

This is one of the few routes leading from Germany to Italy. Lines from the Balkans and Trieste converge on Jesenice in Yugoslavia; from here trains can either run N through the Karawanken tunnel to Rosenbach and Villach, or W to Tarvisio, and thence NE to Arnoldstein and Villach. From both Rosenbach and Villach lines run E to Klagenfurt (for Wien). Here the tracks divide, one branch running directly to Villach Hauptbahnhof, one bypassing this station and rejoining these lines E of it, and Route 123 turning sharply W to Lind Junction where it meets another connection from Villach Hbf. The line is DT from Warmbad Villach to Spittal.

Now follows the easiest section of the line. On a very gentle upgrade with few curves the line ascends the Drau valley in a general NW direction, keeping close to the steep left (NE) side of the valley and generally close to the river. At Spittal Millstättersee (72.8 km.) the line becomes ST and electrified and the Tauern line proper begins.

For approximately 5 km. the Tauern line and the ST s.o. line to San Candido in the Italian Dolomites run side by side. The San Candido line then turns away to the W up the Drau valley and the Tauern line begins its long ascent up the E side of the Moll Tal at an average gradient of 27.8 per mille. The most difficult section of all is from Peck to Obervellach (10.3-10.9 km.) where the side of the Moll Tal is broken by ravines and the line has to make long curves in tunnels and cross high viaducts to negotiate them. At Obervellach the station is 100 m. above the valley floor and is connected with the village by a cable car.

The line leaves the Moll Tal and ascends the valley of the Mallnitz, which is a gorge for the first 3 km. It then runs through the 8,551 m. long Tauern tunnel and emerges near the head of Gasteiner Tal on the N side of the Tauern range. From Bockstein, the station at the tunnel entrance to Bad Gastein (123.5 km.) the line runs along the E or right side of the valley, it then crosses the river just S of Bad Gastein station and immediately runs high up along the western side of the valley, the river running first in a gorge (at Bad Gastein itself), and then in a narrow flat-bottomed valley. Between Bad Gastein and Hofgastein (123.5 to 134.4 km.), and most notably between Angertal and Hofgastein, the line crosses numerous viaducts, runs through short deep cuttings, and winds continuously.

At Hofgastein (134.4 km.) the railway descends to the valley floor and runs on an embankment alongside the Gasteiner Ache. N of Klammsstein (144.5 km.) the river enters the Klamms Gorge, a winding ravine with overhanging walls, and the railway crosses the river, runs through the Oberer Klamms tunnel, crosses the river again, runs through the Unterer Klamms tunnel, and finally emerges on the right-hand (S) side of the Salzach valley. It immediately curves ENE running parallel with the Wörgl-Salzburg line (Route 124), crosses a further series of viaducts, runs through a short tunnel, and descends to the valley floor just W of Schwarzach St. Veit.

General Details

1. GARGY ELEVATION (4 ft. 8) in 1. See Fig.

2. LENGTH:

Jesenice-Schwarzach, 111.5 km. (70 mi.)
Tarvisio-Schwarzach, 111.5 km. (70 mi.)

3. TRACK:

Jesenice-Rosenbach, double.
Rosenbach-Warmbach Villach, single.
Tarvisio-Warmbach Villach, single.
Warmbach Villach-Spittal Millstättersee, double.
Spittal Millstättersee-Mallnitz, single.
Mallnitz-Bockstein: Double.
Bockstein-Schwarzach St. Veit, single.

4. MAXIMUM PERMISSIBLE AXLE LOAD: 15 metric tons.

5. MAXIMUM GRADIENT:

27.8 per mille up, frequent, between Pusarnitz and Mallnitz.
28.1 per mille down between Klamstein and Schwarzach St. Veit.

6. MINIMUM RADIUS OF CURVES:

200 m. between Tarvisio and Thori-Maglern.
250 m. frequent throughout the line.

7. TRACTION:

Jesenice/Tarvisio-Spittal Millstättersee, steam.
Spittal Millstättersee-Schwarzach St. Veit, electrified. (15,000 V a.c. single-phase 16 2/3 cycles.) Power supply from Stubach and Mallnitz power stations. Sub-stations at Schwarzach St. Veit and Mallnitz.

8. MAXIMUM DISTANCE BETWEEN STATIONS: (passing loops on ST sections):

Rosenbach-Warmbach Villach, 6.6 km. (4 miles).
Spittal Millstättersee-Mallnitz, 6.6 km. (4 miles).
Tarvisio-Warmbach Villach: 8.5 km. (5 1/2 miles).
Bockstein-Schwarzach St. Veit: 8.6 km. (5 1/2 miles).

9. ENGINE SHEDS:

Arnoldstein. Jesenice. Rosenbach.
Villach Westbahnhof and Hauptbahnhof.
Spittal Millstättersee (probably).
Schwarzach St. Veit.

10. MARSHALLING FACILITIES:

Villach Westbf. Villach Hbf.
Smaller yards at Spittal Millstättersee and Schwarzach St. Veit, also at Jesenice (Yugoslavia) and Tarvisio (Italy).

11. WATERING FACILITIES:

Tarvisio. Spittal Millstättersee.
Arnoldstein. Penk.
Jesenice. Obervellach.
Rosenbach. Mallnitz.
Faak am See. Bockstein.
Villach Westbf. Angertal.
Villach Hbf. Schwarzach St. Veit.

12. VULNERABLE POINTS: Marked with asterisk in text.

Most of this line presented great difficulties of construction as it runs through the Karawanken and Tauern ranges of the Alps. Gradients are steep and curves sharp, and the only straightward section is the 40 km. of DT between Villach and Spittal, where the line follows the Drau valley.

(a) Locomotive and marshalling facilities in 9 and 10 above.

(b) Tunnels at 9.8 km. and 1.6 km (two tunnels on Tarvisio-Villach section), at 3.6 km. (Karawanken tunnel), at 95.9 km. (Zwenberg-Pfaffenberg Viaduct and tunnels), at 95.9 km.-101.9 km. (10 tunnels between Penk and Obervellach), at 100.2 km. (tunnel leading to Rapponig viaduct), at 105.9 km. (Dosen), at 110.4 km. (Tauern), at 144.5 km. (upper and lower Klamn tunnels).

(c) Junctions at Jesenice, Rosenbach, Villach, Klagenfurt and Lind.

(d) Bridges: At 9.2 km. and 22 km. (bridges over rivers Gailitz and Gail on Tarvisio-Villach section), at 30.8 km. (over R. Gail), at 36.2 km. (over R. Drau), at 86.1 km. (over Mühldorferbach), at 90.9 km. (over Ruckbach).

At 95.9 km. (Zwenberg-Pfaffenberg viaduct), at 101.1 km. (Rapponig viaduct).

At 95.9 km.-101.9 km. (5 bridges in Fank-Obervellach section).

At 123.5 km.-134.4 km. (11 viaducts and several smaller bridges on Bad Gastein-Hofgastein section).

At 119.7 km. (over Anlaufbach), at 125.8 km. (Winterreith viaduct), at 128.4 km. (Angertal viaduct), at 148.5 km. (Kenslachgraben viaduct).

At 114.5 km. (2 bridges over Gasteiner Ache) and at 151.1 km. (Thomernbach viaduct).

(e) Power stations and sub-stations as in (4) above.

13. CAPACITY:

	Trains per day each way	Net train load tons military stores
Jesenice-Rosenbach	48	200
Rosenbach-Villach	16	200
Tarvisio-Villach	16	200
Villach-Spittal	48	200
Spittal-Schwarzach	24	350 (electric traction)
Spittal-Schwarzach	12/15	200 (steam traction)

14. SIGNALLING:

Jesenice-Warmbach Villach: Telegraphic block working.
Warmbach Villach-Pusarnitz: Block working with block instruments.
Pusarnitz-Loifarm: Telegraphic block working.
Loifarm-Schwarzach St. Veit: Block working with block instruments.
Tarvisio-Thori-Maglern: Telegraphic block working.
Thori-Maglern-Arnoldstein: Block working with block instruments.
Arnoldstein-Warmbach Villach: Telegraphic block working.

15. TRAIN DESPATCHING: In force: train despatching centres at Tarvisio, Jesenice, Rosenbach, Villach Westbf., Spittal Millstättersee and Schwarzach St. Veit.

16. REPAIR SHOPS: Attached locomotive repair shops at engine-sheds. Wagon repair shops at Villach Westbahnhof.

Distance from Jesenice

Km.	Stations	Engineering works	Details and facilities
0.0	JESENICE (AARLING) Alt. 573.0, mg. 21.1 up, 23.5 down, mrc. 250 m.		Gradient 2 up. SER. PL (500 m.). Wb (30 t). Wb. Large ES. Tbl. Small MY (at least 6 sidings). J with— (1) ST s.o. line SE to Ljubljana (Yugoslav State Railways). (2) ST s.o. line S to Mediolle and Gorizia (Yugoslav and Italian State Railways). (3) ST s.o. line WNW to Tarvisio. This line runs parallel to Route 125 for 2 km., the two then separate and Route 125 passes over the Tarvisio line. Jesenice-Rosenbach section built as DT. One track reported taken up in 1937 but relaid in tunnel in 1940. Tunnel damaged in 1941 but now open. Line ascends N (left) side of narrow valley of R. Save to the Karawanken tunnel running WNW. Main road crosses station yard. Road crosses W end of station yard. Masonry.

18.0	..	Bridge over stream.	Masonry.
18.3	..	Bridge over main road.	Masonry.
19.2	FURNITZ ..	..	SR. Wb (30 t). PL and LS both c. 700 m. long. 3 DES E of station, N of line, access from W, c. 600 m. long. Masonry, immediately E of Furnitz station.
		Bridge over stream. Short cutting.	
21.7	MOLLERN .. Alt. 524 m., mg. 8 down, mrc. 300 m.	..	Halt. Line curves NW on embankment.
22.0	..	Bridge over R. Gail.	Girder construction. Bridge for Jesenice-Villach line adjacent to E.
22.6	..		From here to Villach line corresponds with Jesenice-Villach line.
24.1	WARMBAD VILLACH		

ROUTE 126

S. CANDIDO (INNICHEN) SPITAL-MILLSTÄTTERSEE

General Description

This is a part of the single track line which connects the Brenner line at Fortezza with the Tauern line at Spital-Millstättersee and is chiefly important as an alternative to either route. It follows the valley of the R. Drau (Drava) throughout, the valley starting as a gorge and widening as it receives its tributaries, the Isel and the Moll.

General Details

1. GAWN 1145 mm (45 in.) Standard
2. TRACK GAUGE 1435 mm (56 1/2 in.)
3. TRACK Single

4. MAXIMUM PERMISSIBLE AXLE LOAD: 16 metric tons.

5. MAXIMUM GRADIENT:

- 25 per mille down between Abfalterbach and Mitterwald a.d. Drau.
- 5 per mille up between S. Candido and Viersbach and Viersbach and Weitzbaum.

6. MINIMUM RADIUS OF CURVES:

- 250 m. between S. Candido and Lienz.

7. TRACKS: Single.

8. MAXIMUM DISTANCE BETWEEN STATIONS:

- 10 km. (6 1/4 miles) (Fial-Lienz).

9. **E. LINE SHELDS:**
S. Candido. Possibly also shed for electric locomotives at Spittal-Millstättersee.
Lienz.
10. **MARSHALLING FACILITIES:**
Small yard at Spittal-Millstättersee.
11. **WATERING FACILITIES:**
S. Candido. Detach in route.
Abfalterbach. Klebach-Lienz.
Thal. Spittal.
Lienz.
12. **VULNERABLE POINTS:** Marked with asterisk in text.
(a) Locomotive and marshalling facilities as in 9 and 10.
(b) Km. 6.48-6. Bridge over R. Isel.
Km. 101-1. Bridge over R. Möll.
Km. 104-9. Bridge over stream (double track).

There is no detailed information available about the engineering works on this line but the stone bridges are probably fairly large. The whole line runs between high mountains, and the Pustertal valley from S. Candido to Lienz, i.e. the upper Drau valley, is practically a gorge, the railway running high up along the side of the valley with few but sharp curves and steep gradients.

13. **CAPACITY:**
16 trains per day each way, of 200-250 net tons military stores.
14. **SIGNALLING:**
No information available.
15. **TRAIN DISPATCHING:**
Train control in operation, centralised at Lienz and Spittal.
16. **REPAIR SHOPS:**
No information available.

Distance from S. Candido

Km.	Stations	Engineering works	Details and facilities
0	S. CANDIDO (INNICHEN) Alt. 1,116-8 m., mg. 18 down, 3 up, mrc. 280.	..	Gradient 0. Wb (30 t); W; ES; Tbl; PL; at least 2 sidings. Line descends the narrow valley of the R. Drau (Drave), closely following the main road to Weit- lanbrunn. General direction ESE and left side of valley to Vercisaco (Vierschach) halt. The valley of the Drau known as the Pustertal is followed to Spittal, the line running either on embankment or on a terrace up the valley side.
3.0	..	8 culverts or bridges.	Line crosses main road W of Vercisaco halt.
6.1	VERCISACO (VIERSCHACH) Alt. 1,126-1 m., mg. 18 down, mrc. 280.	..	Gradient 2.0 down, 3 up. Halt.
8.1	..	3 culverts or bridge. Culvert or bridge.	Italo-Austrian frontier.
9.3	WEITLANBRUNN Alt. 1,108-2 m., mg. 18-8 down, mrc. 280 m.	..	Gradient 18.0 down. Halt. Line follows right bank of river closely to Tassenbach; main road follows left side of valley.
9.8	..	Bridge over road. 4 culverts or bridges.	
12.3	SILLIAN Alt. 1,080 m., mg. 7.9 down, mrc. 280 m.	..	ES. Rectangular, capacity 4 locom. Tbl. FR. SR. Wb (30 t). PL at least 1 siding.
12.6	..	Road overbridge.	Gradient 2.0 down.
13.6	..	Bridge over Sagbach.	
15.3	TASSENBACH Alt. 1,070-4 m., mg. 17.9 down, mrc. 280.	..	Halt.
17.0	..	Bridge over R. Drau (Drave)	Line crosses Drau into Austria at Vercisaco (Vierschach)
17.0	..	Bridge over road. Bridge over R. Drau (Drave)	Line crosses into Austria at Vercisaco (Vierschach)

RAILWAYS

Km.	Stations	Engineering works	Details and facilities
56.0	..	Bridge over stream.	Line and main road run close to left side of valley to Oberdrauburg.
57.4	..	Bridge.	
57.7 57.7	..	Bridge over stream. Bridge over R. Drau.	
61.1	OBERDRAUBURG Alt. 621.2 m., mg. 5 down, mrc. 316 m.	..	Gradient 2.8 down. SR. Wb (25 t). PL. At least 1 siding. Station on right bank of R. Drau.
61.8	..	Bridge over R. Drau.	Halt.
62.5	..	Culvert.	
62.8	..	Bridge over stream.	
64.3	INSCHEM Alt. 615.5 m., mg. 5.6 down, mrc. 80 m.	..	Halt.
65.1	..	Bridge over stream.	
69.2	DELLACH IM DRAUTALE Alt. 604.3 m., mg. 4.0 down, 2.5 up, mrc. 375 m.	..	
70.2	..	3 small bridges. Bridge.	Halt.
73.6	Berg Alt. 598.6 m., mg. 5.0 down, 2.5 up, mrc. 377 m.	..	
74.4	..	2 small bridges.	
76.3	..	Culvert.	Immediately S of Berg halt. Line turns E and runs along left bank of river to Greifenburg station.
76.9	..	Culvert.	
77.3	..	Bridge over stream.	
78.6	..	Ditto Ditto	Immediately W of Greifenburg station.
78.9	GREIFENBURG- WEINENHAR Alt. 588.5 m., mg. 5.0 down, mrc. 380 m.	..	
80.5	..	Ditto	
81.2	..	Ditto	Immediately SE of Steinfeld station.
81.2	..	Ditto	
81.2	..	Ditto	
84.5	STEINFELD IM DRAUTALE Alt. 581.5 m., mg. 5 down, mrc. 400 m.	..	Gradient 3 down. SR. PL.
84.5	..	Ditto	Gradient 2 SR. Wb (25 t). W. PL. At least 1 siding.
84.5	NEUSTADT-LEND Alt. 579.9 m., mg. 4.5 down, mrc. 350 m.	..	
84.5	..	Ditto	
84.5	..	Bridge over stream.	Gradient 2.5 down. Halt. At least 1 siding. River bends to the ESE to join the Mill. A way runs on left bank of river to steep valley side.
84.5	..	Ditto	
84.5	..	Ditto	

Km.	Stations	Engineering works	Details and facilities
100.3	MÖLLBRÜCKEN-SACHSBERG Alt. 557.5 m., mg. 3.0 mrc. 380 m.		Gradient 0. S.P.R. Wb (13.1). PL. At least 1 siding.
100.9 *101.1	..	Bridge over stream. Bridge over R. Möll. Embankment.	Line turns ESE and runs straight on embankment to Lendorf.
104.4	LENDORF Alt. 548.7 m., mg. 5.4 down, 3.9 up, mrc. 474 m.	Embankment.	Halt. Gradient 1.9 down. Continuum to Spittal.
*104.9	..	Bridge over stream (double track).	ST electrified line NW from Schwarzach-St. Veit (Tauern line, Route 125, joins Route 126 at this bridge and the two lines run in parallel tracks to Spittal along the eastern (left) edge of the Draa valley. For 2 km. river is close to railway.
*110.8	SPITAL-MILLSTÄTTERSEE Alt. 543.6 m.		R. Wb (13.1). W. At least 6 sidings. Tbl. Possibly ES, built on electrification of Tarvisio/ Jesenice-Schwarzach-St. Veit line (Route 125).] with— (1) ST. Electrified line NW to Schwarzach-St. Veit (Route 125). (2) DT &c. line SE to Villach. Thence to Tarvisio or Jesenice (Route 125).

Ref: 98-M-0165/A1

[REDACTED]

This refers to our letter to you dated October 7, 1999, regarding your appeal to the Information Security Oversight Office for 14 documents previously requested under Mandatory Declassification Review procedures. One document (AD346727) was provided to you by our letter dated November 19, 1999.

The review of 11 British documents you requested is complete and there are no objections to release. Titles of these documents are contained on the enclosed sheet and a copy of each is enclosed. We will advise you as soon as the reviews of the remaining two documents are completed

*Per DoD letter,
Please mark these 11
documents "available
to the public."*

Sincerely,

SIGNED

H. J. McIntyre
Director
