WATER WAVES. VI.

by

John V. Wehausen

Under Contract Number N-onr-222(30)

University of California
Institute of Engineering Research
Berkeley, California

July 1959

This report constitutes the sixth and last part of an article on Water Waves being prepared for the new edition of the Encyclopaedia of Physics (Handbuch der Physik) published by Springer Verlag.

G. Bibliography

The following bibliography is not by any means a complete one for the subject. For the most part it consists of papers to which reference is made in the text. In a few cases a paper has been included because its subject has been neglected in the text, although this can hardly be considered a remedy. In general, the bibliography is weakest in its coverage of papers describing experimental work; many more such exist than are listed here.

The forms of reference are more or less standard and will not be explained. Titles of papers in Russian have been translated into English; these are indicated by an (R) following the title. Otherwise titles are given in the original language. Published translations into another language are occasionally listed after the original. However, no attempt has been made to search for them. Russian names have been transliterated by a system natural to English, i.e. the cyrillic letters which might be transliterated in a phonetic alphabet as "č, š, ž" are here "ch, sh, zh", respectively. However, when Russians write in a language which uses a roman alphabet, they customarily transliterate their names so that the pronunciation is approximately correct according to the rules of the language in which they are writing. Such variants have been included in brackets behind the transliteration used here.

Weinstein, A.

Sur la vitesse de propagation de l'onde solitaire. Atti Accad. Lincei. Rend. Cl. Sci. Fiz. Mat. Nat. (6) 3 (1926), 463-468.

Sur la vitesse de propagation de l'onde solitaire. Proc. 2nd Internat. Congr. Appl. Mech., Zürich, 1926, vol. 1, pp. 445-448.

Sur un problème aux limites dans une bande indéfinie. C. R. Acad. Sci. Paris 184 (1927), 497-499.

On surface waves. Canad. J. Math. 1 (1949), 271-278.

Weitz, Mortimer; and Keller, Joseph B.

Reflection of water waves from floating ice in water of finite depth. Comm. Pure Appl. Math. 3 (1950), 305-318.

Wendt, H.

Das Problem der Jungfernquelle. Z. Angew. Math. Mech. 32 (1952), 338-358.

Wien, W.

Lehrbuch der Hydrodynamik. Verlag von S. Hirzel, Leipzig, 1900, xiv + 319 pp.

Wigley, W.C.S.

Ship wave resistance. Proc. 3rd Internat. Congr. Appl. Mech., Stockholm, 1930, vol. 1, pp. 58-73.

Ship wave-resistance. Progress since 1930. Trans. Inst. Nav. Arch. 77 (1935), 223-236 (plates XXVI, XXVII); discussion, 237-244.

L'état actuel des calculs de résistance de vagues. Bull. Assoc. Tech. Mar. Aéro. 48 (1949), 513-545.

Wilton, J. R.

On the highest wave in deep water. Phil. Mag. (6) 26 (1913), 1053-1058.

On deep water waves. Phil. Mag. (6) 27 (1914), 385-394.

On ripples. Phil. Mag. (6) 29 (1915), 688-700.

Wu, T. Yao-tsu.

A theory for hydrofoils of finite span. J. Math. Physics 33 (1954), 207-248.

Water waves generated by the translatory and oscillatory surface disturbance. Engineering Division, California Institute of Technology, Pasadena, Calif., Rep. No. 85-3 (1957), 36 pp.

Wu, T. Yao-tsu; and Messick, R. E.

Viscous effect on surface waves generated by steady disturbances. Engineering Division, California Institute of Technology, Pasadena, Calif., Rep. No. 85-8 (1958), 31 pp.

Wuest, Walter.

Beitrag zur Entstehung von Wasserwellen durch Wind. Z. Angew. Math. Mech. 29 (1949), 239-252.

Wurtele, M. G.

The transient development of a lee wave. J. Marine Res. 14 (1955), 1-12.

Yamada, Hikoji.

Highest waves of permanent type on the surface of deep water. Rep. Res. Inst. Appl. Mech., Kyushu Univ., 5, no. 18 (1957), 37-52.

On the highest solitary wave. Rep. Res. Inst. Appl. Mech., Kyushu Univ., 5, no. 18 (1957), 53-67.

On approximate expressions of solitary wave. Rep. Res. Inst. Appl. Mech. 6, no. 21 (1958), 35-47.
