SID 61-1447

ABSTRACT

Covered in this partially annotated bibliography is a review of literature from 1957 to August 1961 on the state of weightlessness with primary emphasis on the physiological aspect with some engineering documentation included.

The references are listed alphabetically by periodical title and corporate author in one alphabet. Both an author and subject index follows the bibliography.

SID 61-147

INTRODUCTION

Strictly defined, weightlessness means complete and total absence of weight or zero gravity. This word is loosely used to denote subgravity or a gravitational force of less than "one g".

In space flight a state of weightlessness exists when the gravitational pull of the earth or other celestial bodies is at zero. In such a state objects and subjects tend to float. Medical experimentation reveals that under such a condition, humans and animals, because of proprioceptive deprivation tend to become disoriented and confused but can still adapt because the tactile and visual references are operative (unless blackout occurs). The space flight of the Soviets indicates that there is little, if any, loss of locomotion and muscular control.

Since research on weightlessness goes back to 1947 (at least), this bibliography only attempts to gather the recent material from open and closed sources. Further sources are the bibliographies which are listed in the subject index and the "Index Medicus" which was not used in the compilation of this bibliography.

This bibliography presents a review of the literature on the subject. With the exception of a few samplings from earlier literature the references tend to range from 1957 to August 1961. Material prior to 1957 can be readily obtained by utilizing bibliographies cited in this report.

Items are listed alphabetically by periodical title and corporate author in one alphabet. Please request material from Technical Information Center (TIC) on the usual "Request for Data" form. Armed Services Technical Information Agency (ASTIA) AD document numbers have been given when available to facilitate ordering from TIC.

BIBLIOGRAPHY

1. ADVANCES IN THE ASTRONAUTICAL SCIENCES, PROCEEDINGS OF THE SIXTH, 18-21 JANUARY 1960.
New York, Macmillan Company, 1961.
BASIC RESEARCH IN ASTROBIOLOGY. Richard S. Young: 317-327.

This discussion pertains to one group of experiments aimed at determining the effect of zero gravity on two basic cellular phenomena - fertilization and cell division. The sea urchin eggs and sperm were used, and a device was designed by means of which sperm and eggs were mixed at the end of the acceleration phase of the flight and fertilization was accomplished during weightlessness. Some of these eggs were fixed during re-entry and some were allowed to develop for study after recovery. Cell division was studied in much the same way. The techniques and results are discussed.

2. AERONAUTICAL SYSTEMS DIVISION. TR 61-166.
WEIGHTLESSNESS AND PERFORMANCE, A REVIEW OF LITERATURE.
J. P. Loftus and L. R. Hammer. Wright-Patterson Air Force Base, Ohio: August 1961, 34 pages.

The implications of weightlessness as encountered in space flight are discussed and the known research dealing with the psychological and physiological effects of zero gravity is critically reviewed. Topics are grouped under the headings of orientation, psychomotor performance, and physiological functions, with a special section on methods of research. The major problem area indicated is the effect of weightlessness on gravity oriented sensory mechanisms, particularly the vestibular apparatus, and consequently, on both physiological functions and psychomotor performance. An extensive bibliography is included.

SID 61-447

3. AERO/SPACE ENGINEERING. 19:36-39, May 1960.
GRAVITY PROBLEMS IN MANNED SPACE STATIONS. C. C. Clark and J. D. Hardy.

It is shown that more human experience at zero g must be available before one can conclude whether it is better while in space to stay at zero g, or, by rotation, to maintain certain centrifugal acceleration, or to have alternate periods at zero g and at higher g; table showing animal and man ascents above 100,000 feet.

4. AERO/SPACE ENGINEERING. 19:16-23, 46, September 1960.
ZERO GRAVITY MERCURY CONDENSING RESEARCH. J. G. Reits.

5. AEROSPACE MEDICINE. 31:543-546, July 1960.
AIRBORNE OSR STUDIES A PRELIMINARY REPORT. G. J. D. Schoeck.

Evidence gained from subjects which were exposed to weightlessness suggests that changes in OSR and heart rate are due primarily to emotional factors rather than physiological.

6. AEROSPACE MEDICINE. 31:661-669, August 1960.
OBSERVATIONS ON HEART RATE AND CARDIODYNAMICS DURING WEIGHTLESSNESS. G. E. Burch and S. J. Gerathewohl.

The series experiments which are described in this article indicate that the stresses which are imposed by weightlessness in aircraft and biological missile flights are well within the range of biological tolerance for human and animal organisms.

7. AEROSPACE MEDICINE. 32:137-140, February 1961.
PHYSIOLOGICAL EFFECTS OF POSTURAL DISORIENTATION BY TILTING DURING WEIGHTLESSNESS. B. G. King.

This report is concerned with observations on labyrinthine function, and specifically the function of the utricular otolith during weightlessness.

SID 61-447

8. AEROSPACE MEDICINE. 32:181-196, March 1961.
SYMPTOMS RESULTING FROM PROLONGED IMMERSION IN WATER: THE
PROBLEM OF ZERO G ASTHENIA. A. Graybiel and B. Clark.

The principal objective of this study was to determine the effects of extended periods of weightlessness on the fitness of the human body.

9. AEROSPACE MEDICINE. 32:209-217, March 1961.
ORIENTATION TO THE VERTICAL DURING WATER IMMERSION.
J. L. Brown.

It is shown that the utricles are relatively inefficient as gravity sensors when the head is in certain positions. The simulation of zero gravity may be enhanced by utilizing these positions with water immersion.

10. AEROSPACE MEDICINE. 32:336-340, April 1961.
A STUDY OF ANIMAL REFLEXES DURING EXPOSURE TO SUBGRAVITY
AND WEIGHTLESSNESS. G. J. D. Schock.

A resume of several experiments conducted to study the role of the vestibular apparatus during states of subgravity and weightlessness is presented. The animals used were cats which were carried in an airplane. Data was collected by means of a camera recording the animals' responses.

11. AEROSPACE MEDICINE. 32:387-400, May 1961.
PSYCHOBIOLOGICAL EFFECTS OF WATER-IMMERSION-INDUCED
HYPODYNAMICS. D. E. Craveline, et al.

Discussion of an experiment conducted on one subject for a seven-day period during which extensive biologic data was collected, and involving whole-body immersion in water.

12. AEROSPACE MEDICINE. 32:719-725, August 1961.
HAND-EYE COORDINATION IN WEIGHTLESSNESS. T. D. Whiteside.

SID 61-147

13. AEROSPACE MEDICINE. 32:726-736, August 1961.
PHYSIOLOGIC EFFECTS OF A HYPODYNAMIC ENVIRONMENT: SHORT-TERM STUDIES. D. E. Graveline and O. W. Barnard.
Experimental investigation of the effects upon human beings of 6, 12, and 24 hours of water immersion. Tilt-table and heat-chamber tests are made, and responses to headward acceleration are studied. Pertinent psychomotor tests and evaluations of muscle strength are also discussed.
14. AIRCRAFT & MISSILES. 3:52-53, July 1960.
BIOMECHANICS OF WEIGHTLESSNESS. H. T. E. Nertsberg.
15. AIRCRAFT & MISSILES. 4:26-29, June 1961.
NEW APPROACH TO ZERO GRAVITY TESTS. R. B. Levine.
Discussion of the main features of the "Null-Gravity Simulator" developed by Lockheed's Georgia Division, designed to nullify man's visual, mechanical, and inner-ear cues to gravity. The concepts of null-gravity and zero-gravity are differentiated and the principles of null-gravity simulation are studied as an introduction to the subject.
16. AIR FORCE. 42:109-110, April 1959.
THE WEIRD WORLD OF WEIGHTLESSNESS. W. Leavitt.
17. AIR FORCE. 44:112-113, April 1961.
ALL IN A WEIGHTLESS DAY'S WORK. J. S. Butz, Jr.
18. AIR FORCE. BALLISTIC MISSILE DIVISION. AIR RESEARCH AND DEVELOPMENT COMMAND. WDCFB 2.
DISCOVERER III. Inglewood, California: 1960, 50 pages.
AD-241 853
Discusses results of experiments with 4 mice sent in the two stage Discoverer.

19. AIR FORCE. MISSILE DEVELOPMENT CENTER. TN 58-3.
APPARENT MOTION OF A FIXED LUMINOUS TARGET DURING
SUBGRAVITY TRAJECTORIES. G. J. D. Schoek.
Holloman Air Force Base, New Mexico: February 1958.
AD-135 009.

This study was to determine the effects of linear acceleration and deceleration found in flying a ballistic trajectory on the visual perception of a target in the dark. Four subjects observed a fixed luminous target while the pilot of an F-94 aircraft executed the ballistic trajectory.

20. AIR FORCE. MISSILE DEVELOPMENT CENTER. TR 58-6.
SENSORY REACTIONS RELATED TO WEIGHTLESSNESS AND THEIR
IMPLICATIONS TO SPACE FLIGHT. G. J. D. Schoek.
Holloman Air Force Base, New Mexico: April 1958, 10 pages.
AD-135 012.

Discussion of the implications of a sensory-starved environment and comparison to the conditions that will prevail in actual space flight. Recommendations for training for future space flight are presented.

21. AIR FORCE. MISSILE DEVELOPMENT CENTER.
HISTORY OF RESEARCH IN SUBGRAVITY AND ZERO-G.
J. S. Hanrahan. Holloman Air Force Base, New Mexico:
May 1958.

The subjects of subgravity and zero-gravity are studied in the form of an historical essay. Methods of studying various types of subjects (human, feline, rodent, etc.) are discussed and results of the experiments are given.

Bibliography
27. AIR UNIVERSITY QUARTERLY REVIEW. 10:121-141, Summer 1958.
WEIGHTLESSNESS. Siegfried J. Gerathewohl.
- Includes tables on responses of 47 human subjects to short periods of virtual weightlessness and discussion of psychological aspects.
28. AMERICAN SOCIETY OF MECHANICAL ENGINEERS TRANSACTIONS, SERIES E. 28:165-170, June 1961.
TRANSIENT CAPILLARY RISE IN REDUCED AND ZERO-GRAVITY FIELDS. Robert Siegel.
- Experimental information given on the transient "capillary" rise of water into vertical tubes subjected to reduced and zero-gravity fields. The response in a low-gravity environment is of interest in studying the behavior of liquid systems for space vehicles.
29. ARMED FORCES MEDICAL JOURNAL. 11:786-793, July 1960.
PERCEPTION OF THE HORIZONTAL AND VERTICAL IN SIMULATED SUBGRAVITY CONDITIONS. G. J. D. Schock.
- The role of the labyrinth in sensing body position under sub gravity conditions in absence of peripheral visual cues was assessed by comparing perception of the horizontal and vertical on land and in water for several body positions. During weightlessness in actual space flight, artificial gravity forces may be needed to ensure adequate human orientation.

SID 61-147

30. ARMED SERVICES TECHNICAL INFORMATION AGENCY.
BIO-ASTRONAUTICS. Arlington 12, Virginia: February 1959,
157 pages.
AD-211 775
- A bibliography covering literature from 1952 to 1958. It comprises a list of references to reports related to the biological problems of space flight. The reports, which primarily originate from Government-sponsored research programs, may be obtained by military agencies and prime contractors of military departments.
31. ARMED SERVICES TECHNICAL INFORMATION AGENCY.
BIO-ASTRONAUTICS (SUPPLEMENT). Arlington 12, Virginia:
February 1960, 43 pages.
AD-233 000
- This supplement is to make available references which have been added to ASTIA since the publication of the bibliography of February 1959.
32. ARMY MEDICAL SERVICE. RESEARCH AND DEVELOPMENT COMMAND. SR-13.
SOME OBSERVATIONS ON HEART RATE AND CARDIODYNAMICS DURING
WEIGHTLESSNESS. George E. Burch and Siegfried J. Gerathewohl:
13 November 1959, 14 pages.
AD-234 284
- AEROSPACE MEDICINE. 31:661-669, August 1960.
- Considerable efforts were made during the last decade to determine the biomedical effects of subgravity and zero-G. Animals and men were exposed to short and moderate periods of weightlessness; and their behavior, respiration, and cardiovascular functions were recorded during aircraft and rocket trajectories. The psychological factors which entered into the physiological phenomena is clearly evident through an analysis of the data obtained in zero-G experiments.

34. **ASTRONAUTICA ACTA. 2:203, 1956.**
PERSONAL EXPERIENCES DURING SHORT PERIODS OF WEIGHTLESSNESS
REPORTED BY SIXTEEN SUBJECTS. S. J. Gerathewohl.
- Reactions to weightlessness by passengers in a Lockheed T-33 flying a Keplerian trajectory as revealed in Air Force School of Aviation Medicine tests of 1955 and 1956.
35. **ASTRONAUTICA ACTA. 1:16-24, 1958.**
PRODUCING THE WEIGHTLESS STATE IN JET AIRCRAFT.
S. J. Gerathewohl, et al.
- Definition of mechanical principles of gravity and acceleration for "agravic" state purposes. The relationship between the duration of the weightless state and peak altitude of the maneuver are discussed.
36. **ASTRONAUTICS. 2:32-34, 74-75, November 1957.**
WEIGHTLESSNESS. Siegfried J. Gerathewohl.
- Discussion of the physical principles of weightlessness, how it is achieved in an aircraft, and an account of human reactions to this phenomena.
37. **ASTRONAUTICS. 4:26-27, 84-86, February 1959.**
WEIGHTLESSNESS AND SPACE FLIGHT. H. J. von Beckh.
- Deterioration of neuromuscular coordination and disorientation are considered to be originated by the weightless state per se. However, more complex problems arise during extended space flights, as well as during alternate acceleration and weightlessness, such as occurs during the ascent and re-entry of space vehicles. Results of experiments in jet aircraft are cited to show that the weightless state aggravates other physiological conditions, which, in combination, pose serious problems to man in space flight.

39. ASTRONAUTICS. 4:28, June 1959.
KEEPING YOUR FEET ON THE GROUND IN SPACE. J. A. Newbauer.

A brief note given on current and projected experiments with magnetic shoes which will allow man to walk in normal fashion in spacecraft during periods of weightlessness.

40. ASTRONAUTIK (STOCKHOLM). 1(1):9-36, 1958.
SOME BIOPHYSICAL AND MEDICAL PROBLEMS INVOLVED IN MANNED SPACE FLIGHT: A REVIEW. O. J. Olafsson.
In English.

The reduced gravity or zero gravity experienced when a satellite or a space vehicle is coasting freely in space is supposed to cause no serious disturbances of the normal physiological functions of the body, but orientation and co-ordination may be difficult during the weightless state before adaptation to the new situation has taken place. In the case of long-lasting trips, the storage problems of oxygen and air-purification chemicals as well as of food and water may become critical. Photosynthetic air purification and food synthesis from algal material may be the solution in the future.

43. AVIATION MEDICAL ACCELERATION LAB. NADC-MA-5909.
ACCELERATION PROBLEMS IN SPACE FLIGHT. J. D. Hardy, et al.
Johnsville, Pennsylvania: 1 October 1959, 34 pages.

The major problems associated with acceleration and the details of previous experimental work in this field using centrifuges, rocket sleds, and other simulators are described. The problem of weightlessness is discussed with special reference to Gerathwohl's investigation of human tolerance to the weightless state produced during ballistic trajectory aircraft flights. A detailed account is given of advances in high G protection, including the use of the contour couch and water immersion.

44. AVIATION WEEK. 69(25):23, 22 December 1958.
FEW PHYSIOLOGICAL CHANGES NOTED IN MONKEY'S WEIGHTLESS FLIGHT.

The longest weightless period achieved with a primate and the telemetric results are discussed.

45. AVIATION WEEK. 69(25):52-53, 55, 22 December 1958.
ZERO GRAVITY TESTS SHOW MAN CAN ADJUST TO SPACE.
Edward L. Brown.

Experiments conducted during the past six months both in the laboratory and in actual flight, in which short periods of zero gravity were achieved, reveal that there is no serious decrement in man's performance under these conditions. Without exception, the subjects were able to adjust to zero gravity conditions within seconds. It may be that longer periods of zero gravity and further tests may upset the conclusions reached to date, but, as of now, weightlessness does not appear to create as serious a problem for crews as biomedical scientists had predicted.

46. AVIATION WEEK. 72(21):54-59, 23 May 1960.
NEW METHODS PROBE SPACE FLIGHT HAZARDS. Evert Clark.

Current and projected investigations on the effects of radiation and of weightlessness on humans in space are discussed.

SID 61-447

DEFENCE RESEARCH MEDICAL LABORATORIES SCIENTISTS FREE MAN'S
SPACE LIMITATIONS. P. Brannan.

The work of the Defence Research Medical Laboratories at Downsview, Ontario, Canada, towards the solution of the problems of weightlessness and motion sickness in space travel is discussed. Muscular deterioration, circulatory changes, and problems of movement, as results of the weightless condition, are briefly considered. Experiments on motion sickness resulting from the utilization of angular acceleration to counteract weightlessness is also described.

49. FLIGHT (LONDON). 61:298-300, 14 March 1952.
MAN WITHOUT GRAVITY: THE PHYSIOLOGICAL AND PSYCHOLOGICAL
PROBLEMS OF SPACE FLIGHT. L. N. Thompson.

The principal physiological functions of the human body such as respiration, circulation, and digestion, are primarily muscular in action and, therefore, independent of gravitational pull. The author summarizes other problems that will arise in actual space flight, such as the need for atmospheric circulation because of lack of convection currents, prevention of blackouts during high take-off accelerations, protection from radiation, the possibility of infection by alien viruses and germs encountered on other planets, and the need of proper preparation against psychological crises on extended flights.

50. FLUG-REVUE (STUTTGART). 2:22-25, February 1959.
THE DANGEROUS G. M. Jager.
In German.

The physiologic effects of G forces and human G-tolerance limits are reviewed, and protective measures and current experiments, such as tests in water immersion chambers, are discussed.

In French.

Review of the physiological aspects of interplanetary flight emphasizing problems of the gravity-free state.

53. GROUND SUPPORT EQUIPMENT. 2(4):83-85, August-September 1960.
ASTRONAUT SUPPORT PROBLEM. C. Adams.

A study of man's water requirements in space and an analysis of eating and drinking experiments conducted under zero-gravity conditions are presented.

54. HUMAN FACTORS. 2(2):62-69, May 1960.
INTERNATIONAL LIST OF HUMAN FACTORS FILMS. C. W. Carter.

This annotated bibliography presents 54 references to films dealing with human factors problems in man-machine design. The subjects covered include emergency escape and survival systems, zero gravity studies, medical aspects of high intensity noise, illumination and dark adaptation, anthropometrical techniques, simulated decompression studies, aircrew fatigue problems, and the effects of whole body vibration on human performance. The references are categorized by source in order to facilitate procurement of certain films desired by the reader.

SID 61-447

55. INSTITUTE OF RADIO ENGINEERS TRANSACTIONS ON MILITARY ELECTRONICS. MIL-4(2-3):284-287, April-July 1960. BASIC RESEARCH EFFORTS IN ASTROBIOLOGY. R. S. Young and J. L. Johnson.

The need is cited for the development of instrumentation capable of accurately measuring and telemetering various physiologic responses of a wide variety of cellular systems subjected to accelerative forces, to conditions of vacuum, and to zero-gravity.

56. INTERAVIA. 14:390-392, April 1959. PILOTS BEYOND THE STRATOSPHERE.

57. INTERNATIONAL ASTRONAUTICAL CONGRESS, PROCEEDINGS OF THE VIIIth, 1957. Wien: Springer-Verlag, 1958. PRODUCING THE WEIGHTLESS STATE IN JET AIRCRAFT. S. J. Gerathewohl, et al: 533-542.

In the conclusion it is stated that the pilot had flown all zero-gravity research flights at the School of Aviation Medicine and had experienced weightlessness 3 minutes each flight or a total of 11 hours with no apparent physiological effects.

58. INTERNATIONAL ASTRONAUTICAL CONGRESS, PROCEEDINGS OF THE IXth, 1958. Wien: Springer-Verlag, 1959. FLIGHT EXPERIMENTS ABOUT HUMAN REACTIONS TO ACCELERATIONS WHICH ARE FOLLOWED OR PRECEDED BY WEIGHTLESSNESS. H. J. von Beckh: 507-525.

Alteration of weightlessness and accelerations results in a decrease of acceleration tolerance and of the efficiency of physiologic recovery mechanisms. The implications for planning manned space flight are, first, that thrust values and re-entry profiles must take the lower acceleration tolerance into consideration, and second, that adequate G protection must be designed for the pilot, to prevent dangerous effects of unavoidable high accelerations.

SOME CONSEQUENCES OF WEIGHTLESSNESS AND ARTIFICIAL WEIGHT.
M. P. Lansberg.

Physiological consequences of weightlessness are discussed.
Artificial ventilation will be necessary, because of the
absence of convection. In the absence of gravitational
clues to position, some disorientation may occur and motor
activities may have to be relearned, but muscular atrophy
is not likely to be a real hazard. It would be unwise to
extrapolate from what is experienced during parabolic
flights to what can be expected during semipermanent weight-
lessness.

SOME PHYSIOLOGICAL CHANGES OBSERVED IN HUMAN SUBJECTS DURING
ZERO G STIMULATION BY IMMERSION IN WATER UP TO NECK LEVEL.
E. L. Beckman, et al. Johnsville, Pennsylvania:
10 April 1961, 25 pages.
AD-256 727

It was found that water immersion up to neck level produces an unnatural physiological situation in that, during respiration, the inspired air inflates the lungs to atmospheric pressure while the external pressure against the chest, abdomen, and legs, due to the water, is greater than atmospheric. This situation is equivalent to "negative pressure breathing".

BEHAVIOR OF SOME PERCEPTUAL-MOTOR FUNCTIONS DURING THE
TRANSITION FROM ABOUT TWO TO ZERO G AND THE EFFECT OF
TRAINING: EXPERIMENTS EXECUTED WITH THE SUBGRAVITY TOWER.
T. LeMonaco, et al.
In Italian with English summary (p. 506).

Six subjects executed a repetitive task with electrical switches following a pre-established pattern while at rest and when launched on a subgravity tower to alternate states of hyper- and zero gravity.

- Twenty-six subjects were exposed to a total of 37 separate jet aircraft flights during which zero-gravity parabolic flight maneuvers were performed. Scheduling of body waste elimination should be incorporated into the crewman's standard operating procedures and check list. Special consideration must be given to the design and development of a satisfactory urine receptacle.

- Sleep characteristics were monitored and evaluated by EEG techniques during an exploratory study of biologic hypodynamics produced by body immersion. The hypothesis is advanced that the biologic function of sleep may be to provide a recovery period from the neuromuscular debt acquired from the effects of counteracting the forces of gravity. This has several implications for space travel in the weightless state.

- Simulated weightlessness for a prolonged period produced by the body immersion technic. Changes in psychomotor efficiency was assessed during immersion and after return to the normal environment of one G.
