Some Available Machined Text of Scientific Papers

John O' Connor

**Institute for Cooperative Research
The University of Pennsylvania**

The texts of several hundred papers from a pharmaceutical research collection have been keypunched, and are listed in the accompanying bibliography. The index terms in the bibliography are those given the documents at Merck (see below). This statement is to indicate the availability to others, at cost, of this machined text. Copies of this statement, punch conventions, and bibliography are available from the author.

The punching has been done as an aid to mechanized indexing research supported by the Information Systems Branch, Office of Naval Research (Contr. NONR 551 (35), NR 049 (143), and by the Air Force Office of Scientific Research (Grant AF-AFOSR-62-257). Thus the machining costs are being paid by ONR and AFOSR.

The actual punching labor has been done without charge at the New Jersey Reformatory, Bordentown. The boys doing the work have been extremely conscientious and capable, and the cooperation of Dr. William Swartley, Mr. Albert Wagner, (Superintendent) and Mr. Richard Wolf have been invaluable.

The documents punched are mostly a random selection from the ten thousand documents subject indexed in 1955 for the Merck Sharp and Dohme Research Laboratories retrieval system (West Point, Penna.). Merck has given me the index cards for these ten thousand papers. The cooperation of Mr. Robert Harte and Mrs. Evelyn Armstrong in this and related matters has been extremely helpful.

Foreign language papers have not been punched. Reviews (so indexed at Merck) have usually not been punched, because they offer a special problem for mechanized indexing and because they tend to be quite long.

If copies of some or all of the punched cards are desired, make arrangements for card copying, and write to the author to arrange temporary release of the punched card file for copying.

Pre-editing and Punch Conventions

Each paper is provided with a document number. The abstract, "summary," or "conclusions" section is prefixed with \$ and followed by \$\$\$. Each heading is prefixed by a slash and followed by a double slash.

Some material is crossed out, not to be punched. (1) the author's name and affiliation. (2) Acknowledgement footnotes and other footnotes judged very likely not subject relevant. (3) Everything in references other than book, journal, and paper titles. (4) In charts, figures, and material accompanying photographs, masses of numbers and repetitions of words.

Each punched card is divided into four fields of sixteen columns each, with the remaining sixteen columns used for control information. DD is punched in the first field, the document number in the next field, and then the paper is punched. Each successive word is punched in a separate field. Words of more than sixteen characters are truncated. A punctuation mark is treated as the last character of the word it follows.

Each sentinel (described below) is in a separate field. The title is preceded by TT and followed by TTTT. Other begin and end sentinels are: abstract \$, \$\$\$; a heading /, //; all footnotes (punched together) NN, NNNN; all references (punched together) RR, RRRR; all figure material (punched together) FF, FFFF. Also each sentence is preceded by SS and followed by SSSS, and similarly for each paragraph with PP, PPPP.

Each reference is punched as a sentence, each footnote is punched as a paragraph, and the material from each figure is punched as a paragraph.

A question mark or exclamation point is punched as a period. Any other symbol for which there is no key is punched as an asterisk. The end of all punching for a document is followed by DDDD in the next field.

The set of Merck papers from which a sample was drawn have document numbers between 10,000 and 19,999. Four place random numbers were therefore used for sampling. The random number tables in Barnes and Noble's Tables for Statisticians were used. Specifically, the first 101 four digit numbers from the "Seventh Thousand" (one digit numbers) were selected. It was then decided to take a longer sample, and a shift was made to the "Second Thousand" table.

In addition to more than three hundred papers thus randomly selected, an additional random hundred or so penicillin, toxicity, and mode of action papers have also been punched.

A machined text document number contains eight digits. The last three simply indicate whether the document was indexed with penicillin, toxicity, and mode of action.

Some of the documents have in their machined form numerical codes different from their Merck codes. The Conversion table for these in on a separate page preceding the bibliography.

The bibliography is listed here in the order of the random number tables.

 aureomycin hydrocortisone
 streptomycin BAL
 tetrocycline Vitamin A -121-

11779 SULPHAEMOGLOBINAEMIA

Begg

Brit. Med. J.

1:701-703

March 19, 1955

toxicity
disorders
blood
cells
alkaloids

humans
sulfur
pigment
erythrocytes
magnesium
Chemical Codes:
Acetylsalicylic Acid
Phenacetin
Caffein
Acetanilide

**18790 ERYTHROMYCIN IN THE TREATMENT OF DIPHTHERIA AND
DIPHTHERIA CARRIER STATE.**

Beach, Gamble Jr. and others

16:335-343

September, 1955

Pediatrics
disorders
antibiotics
therapy
children
corynebacteria
vaccine
toxin
respiratory tract

erythromycin
immunity
humans
diphtheria
transmission
anti
penicillin

Chemical Codes:
penicillin

14082 DISEASES OF FEEDER CATTLE

Munson

Southwestern Veterinarian

6:330-334

Summer(1953)

review
fever
animals
poison and poisoning
antibiotic
disorders
immunity
parasites

vaccine
cattle
veterinary medicine
penicillin
eye
vitamins
sulfonamides
Chemical Codes:
Rotenone
Sulfaquinoxaline
Pyribenzamine
Sulfapyridine
Sulfamerizine
Sulfathaizole
Streptomycin
Aureomycin
