U.S.S. TUNA (SS203)

SHIP CHARACTERISTICS

Building Yard: Mare Island Naval Shipyard.

Commissioned: 6 January 1941.

HULL

Light Hull Construction.

Length Overall: 307 feet 0 inches.

Length (between perpendiculars): 302 feet 3 3/4 inches.

Beam (extreme): 27 feet 3 inches.

Beam (molded): 27 feet 0 inches.

Height (lowest point of keel to top of periscope supports): 47 feet 3 inches.

Drafts (at time of test): Fwd. 16 feet 4 inches.

Aft. 16 feet 9 inches.

Standard Displacement: 1475 tons.

Displacement (at time of test): 1942 tons.

MAIN PROPULSION PLANT

Main Engines: Four Fairbanks-Morse, 9 cylinder,
Type 38D8

Auxiliary Engine: Fairbanks-Morse, 7 cylinder,
Type 38D5.

Main Motors and Generators: General Electric.

Main Storage Battery: Exide.

Main Controls: General Electric.

Reduction Gears: Farrel-Birmingham.

Diesel Electric Drive.

PAGE 4 OF 53

U.S.S. TUNA (SS 203)

TECHNICAL INSPECTION REPORT

OVERALL SUMMARY

I. Target Condition After Test.

(a) Drafts after test; list; general areas of flooding, sources.

Draft and list were normal after the test, no flooding occurred.

(b) Structural damage.

No structural damage was experienced.

(c) Other damage.

Machinery, electrical, ship control, fire control and electronic equipment was fully operable after the test except the auxiliary gyro compass which was temporarily inoperable due to spillage of mercury.

II. Forces Evidenced and Effects Noted.

(a) Heat.

There is a very slight scorching of the outer coat of paint on the vertical surfaces of the starboard side of the superstructure and conning tower fairwater. No scorching was noted on horizontal surfaces or where the vertical surfaces were shielded by other structure. The heat flash appears to have come from 60° relative, although this indicates the TUNA had swung considerably to the right, compared with other submarines. There were no apparent reflections of the heat wave back onto a surface which did not face the

SECRET

USS TUNA (SS203)

blast. On this ship, some frame numbers had been painted with yellow chromate in Pearl Harbor and then sprayed over with one coat of an outside haze gray. The scorching of this paint where it covered the chromate painted frame numbers was much more severe than in the immediately adjacent area where there was no chromate under coat. The numerals stood out in scorched paint as sharply as if they had been painted. This effect was duplicated where some green chromate had been applied over a weld and then covered with haze gray. Exposed topside cables in some few instances had a light coating of char or soot which could be rubbed off with the fingers, but in no case was the insulation damaged.

(b) Fires and explosions.

No fires or explosions occurred.

(c) Shock.

Shock transmitted to the auxiliary gyro compass, probably through the ship's structure, caused spillage of mercury from the gyro. This could have been caused by a deep roll of the ship but no evidence throughout the rest of the ship indicates the ship took that large a roll. The direction of this shock could not be determined. The auxiliary gyro is in the control room but there is no evidence to indicate this part of the ship was a shock area. This compass can be put in complete working order by pouring in mercury to replace that lost. No other equipment showed evidence of shock.

(d) Pressure.

The "Coordinator's Report on Air Blast and Water Shock for Tests A and B" of 27 September 1946 indicates the peak air pressure was approximately 4.0 lbs. per square inch and the duration of the positive pressure phase was about 1.0 second. The elastic deformation of the hull, measured at four stations, was less than 0.04 inches.

SECRET

USS TUNA (SS203)

- (e) Any effects peculiar to the atom bomb.

Pressure, heat, slight radioactivity and shock sufficient to spill mercury out of the auxiliary gyro compass were the only noted effects peculiar to the atom bomb.

III. Effects of Damage.

- (a) Effect on machinery, electrical and ship control.

None.

- (b) Effect on gunnery and fire control.

None.

- (c) Effect on watertight integrity and stability.

None.

- (d) Effect on personnel and habitability.

It is believed there would have been no effect on personnel inside the sealed pressure hull but that exposed topside personnel would have suffered severe flash burns. Habitability is unimpaired.

- (e) Total effect on fighting efficiency.

There is no reduction in fighting efficiency from a material standpoint. Exposed personnel topside would have been at least temporarily out of action.

IV. General Summary of Observers' Impressions and Conclusions.

The TUNA had been moored on the surface at a distance of approximately 2200 yards from the burst. From inspection, the

SECRET

USS TUNA (SS203)

impression is formed that this ship was subjected to a directional flash of more or less instantaneous heat followed by a relatively high velocity wind. It is concluded that a submarine on the surface at this distance from an explosion of the type experienced in Test A will not be affected from a material standpoint but would have casualties among exposed topside personnel. Had the submarine been submerged, there would have been no damage and no casualties. For general views of the TUNA after Test A, see Photographic Section on pages 30 to 37.

V. Preliminary General or Specific Recommendations of Inspection Group.

If it is expected that submarines will be subject to such an attack it appears desirable to protect topside personnel to the maximum practicable extent with clothing and structural enclosures. As there is no significant material damage to this vessel no further recommendations are submitted herein.

SECRET

USS TUNA (SS203)

TECHNICAL INSPECTION REPORT

SECTION I - HULL

GENERAL SUMMARY OF HULL DAMAGE

I. Target Condition After Test.

(a) Drafts after test; list; general areas of flooding, sources.

There was no flooding and no change in list or draft.

(b) Structural damage.

There was no structural damage.

(c) Other damage.

None observed.

II. Forces Evidenced and Effects Noted.

(a) Heat.

There is a very slight scorching of the outer coat of paint on the vertical surfaces of the starboard side of the superstructure and conning tower fairwater. No scorching was noted on horizontal surfaces or where the vertical surfaces were shielded by other structure. The heat flash appears to have come from 60° relative, which indicates the TUNA had swung considerably to the right, compared with other submarines. Photographs of the array show that the explosion bore about 70° relative. There were no

SECRET

USS TUNA (SS203)

apparent reflections of the heat wave back onto a surface which did not face the blast. On this ship, some frame numbers had been painted with yellow chromate in Pearl Harbor and then sprayed over with one coat of an outside haze gray. The scorching of the paint where it covered the chromate painted frame numbers was much more severe than the immediately adjacent area where there was no chromate under coat. The numerals stood out in scorched paint as sharply as if they had been painted. This effect was duplicated where some green chromate had been applied over a weld and then covered with haze gray.

(b) Fires and explosions.

None.

(c) Shock.

No evidence.

(d) Pressure.

The "Coordinator's Report on Air Blast and Water Shock for Tests A and B" of 17 September 1946 indicates the peak air pressure was approximately 4.0 lbs. per square inch and the duration of the positive pressure phase was about 1.0 second. The elastic deformation of the hull, measured at four stations, was less than 0.04 inches.

(e) Effects apparently peculiar to the Atom Bomb.

None except as noted in paragraph II (a) above.

III. Effects of Damage.

(a) Effect on machinery, electrical and ship control.

Not observed.

SECRET

USS TUNA (SS203)

(b) Effect on gunnery and fire control.

Not observed.

(c) Effect on watertight integrity and stability.

None.

(d) Effect on personnel and habitability.

Insofar as hull structure is concerned there is no effect on habitability. It is estimated that topside personnel exposed directly to the flash would have suffered severe flash burns.

(e) Effect on fighting efficiency.

None.

IV. General Summary of Observers' Impressions and Conclusions.

From inspection, the impression formed is that this ship was subjected to a directional flash of more or less instantaneous heat followed by a relatively high velocity wind. It is concluded that a submarine on the surface at such distance from an explosion of the type experienced in Test A will not be affected as far as hull material condition is concerned.

V. Preliminary General or Specific Recommendations of the Inspecting Group.

If it is expected that submarines will be subjected to such an attack it appears desirable to protect topside personnel to the maximum practicable extent with clothing and structural enclosures. As there is no significant material damage to this vessel no further recommendations are submitted herein.

USS TUNA (SS203)

TECHNICAL INSPECTION REPORT

SECTION II - MACHINERY

GENERAL SUMMARY ♡ MACHINERY DAMAGE

I. Target Condition After Test A.

(a) Drafts after test; list; general areas of flooding, sources.

Draft and list were normal; no flooding occurred.

(b) Structural damage.

No structural damage was noted.

(c) Other damage.

All machinery and equipment undamaged and operable.

II. Forces Evidenced and Effects Noted.

(a) Heat.

Momentary extreme heat from the direction of the bomb burst is evidenced by heavily scorched and blistered paint on vertical surfaces toward the burst.

(b) Fires and Explosions.

No fires or explosions occurred aboard.

SECRET

USS TUNA (SS203)

(c) Shock.

No indication of shock was noted in the machinery installation.

(d) Pressure.

None evidenced.

(e) Effects apparently peculiar to the Atom Bomb.

Slight radioactivity and momentary extreme heat were only noted effects peculiar to the Atom Bomb.

III. Effects of Damage.

(a) Effect on machinery and ship control.

None. No damage.

(b) Effect on gunnery and fire control.

None. No damage.

(c) Effect on watertight integrity and stability.

None. No damage.

(d) Effect on personnel and habitability.

It is believed there would have been no effect on personnel inside the sealed pressure hull. Habitability was unimpaired. Personnel topside, exposed to the burst, would have received flash burns.

(e) Total effect on fighting efficiency.

None to material. Any personnel topside would have been at least temporarily out of action.

SECRET

USS TUNA (SS203)

IV. General Summary.

It is apparent that a submarine sealed up as for diving and rigged for depth charge attack yet still on the surface would be undamaged by an air burst of an atomic bomb of similar strength and at similar range as the Test A Bomb.

V. Preliminary Recommendations.

None considered necessary.

SECRET

USS TUNA (SS203)

Page 17 of 53 Pages

DETAILED DESCRIPTION OF MACHINERY DAMAGE

A. General Description of Machinery Damage.

(a) Overall condition.

Undamaged. All machinery was operated under service conditions with vessel underway. Diving equipment was tested by stationary trim dive.

(b) Areas of Major damage.

None.

(c) Primary cause of damage in each area of major damage.

None. No damage.

(d) Effect of target test on overall operation of machinery plant.

No effect. All machinery operable as before test.

B. Boilers.

Not applicable.

C. Blowers.

Not applicable.

D. Fuel Oil Equipment.

No damage.

SECRET

TECHNICAL INSPECTION REPORT

SECTION III - ELECTRICAL

GENERAL SUMMARY OF ELECTRICAL DAMAGE

I. Target Condition After Test.

(a) Drafts after test; list; general areas of flooding sources.

Not observed.

(b) Structural damage.

None.

(c) Other damage.

No electrical equipment was damaged or inoperable due to the test except the auxiliary gyro compass.

II. Forces Evidenced and Effects Noted.

(a) Heat.

There was no evidence of heat having affected any equipment inside the pressure hull. Topside cables in some few instances, where completely exposed, had a light covering of char or soot which could be rubbed off with the fingers, but in no case was the insulation damaged at all.

(b) Fires and explosions.

None.

SECRET

USS TUNA (SS203)

(c) Shock.

Shock transmitted to the auxiliary gyro compass, probably through the ship's structure, caused spillage of mercury from the gyro. No other electrical equipment showed any effect due to shock.

(d) Pressure.

There was no evidence of pressure damage.

(e) Any effects apparently peculiar to the atom bomb.

Other than slight radioactivity, the charring of the ship's superstructure on the side toward the blast, particularly on vertical surfaces, is the only phenomenon noted that may be considered peculiar to the atom bomb.

III. Effects of Damage.

(a) Effect on propulsion and ship control.

None.

(b) Effect on gunnery and fire control.

None.

(c) Effect on watertight integrity and stability.

Not observed.

(d) Effect on personnel and habitability.

None except for possible radiological effects and probably heat or blast effects on exposed personnel.

SECRET

USS TUNA (SS203)

(e) Total effect on fighting efficiency.

None.

IV. General Summary of Observers' Impressions and Conclusions.

There was no effect of any significance from the atom bomb on electrical equipment in this ship. It is considered that, even though on the surface, this submarine was outside the range of significant damage by the atom bomb.

V. Any Preliminary General or Specific Recommendations of the Inspecting Group.

None.

SECRET

USS TUNA (SS203)

DETAILED DESCRIPTION OF ELECTRICAL DAMAGE

A. General Description of Electrical Damage.

(a) Overall condition.

No damage except to the auxiliary gyro compass, which could be repaired by adding mercury.

(b) Areas of major damage.

None.

(c) Primary causes of damage in each area of major damage.

None.

(d) Effect of target test on overall operation of electric plant.

Except for the auxiliary gyro compass, the operability of the electric plant was in no way impaired, either directly or indirectly, by the atom bomb.

(e) Types of equipment most affected.

Only the auxiliary gyro compass was damaged.

B. Electrical Propulsion Rotating Equipment.

No damage.

C. Electric Propulsion Control Equipment.

No damage.

SECRET

USS TUNA (SS203)

D. Generators - Ship's Service.

Not applicable.

E. Generators - Emergency.

Not applicable.

F. Switchboards, Distribution and Transfer Panels.

No damage.

G. Wiring, Wiring Equipment and Wireways.

No damage. Topside cables in some few instances, where completely exposed, suffered slight scorching of paint, but in no case was the insulation damaged.

H. Transformers.

No damage.

I. Submarine Propelling Batteries.

No damage. Batteries were fully charged and on open circuit during the test. Analysis of electrolyte samples after the test by Pearl Harbor Naval Shipyard revealed no significant changes attributable to the atom bomb.

J. Portable Batteries.

No damage.

K. Motors, Motor-Generator Sets and Motor-Controllers.

No damage.

SECRET

USS TUNA (SS203)

L. Lighting Equipment.

No damage.

M. Searchlights.

No damage. The signal searchlight was removed prior to the test.

N. Degaussing Equipment.

Not applicable.

O. Gyro Compass Equipment.

No damage occurred except to the auxiliary compass in the control room, which spilled some mercury from its rotor bearings. This was apparently due to shock as there was no evidence of excessive rolling or pitching. The auxiliary gyro compass is an Arma Mark IX, Mod 2. This type of compass is susceptible to mercury spillage under shock as similar failures have occurred on other target submarines in Tests A and B. However, it is understood that this compass is now obsolete. The spilled mercury was cleaned off the sensitive element and the compass operated satisfactorily.

P. Sound Powered Telephones.

No damage.

Q. Ship's Service Telephones.

Not applicable.

MEMORANDUM FOR DEFENSE TECHNICAL INFORMATION CENTER
ATTENTION: OMI/Mr. William Bush

SUBJECT: Declassification of Reports

The Defense Special Weapons Agency (formerly Defense Nuclear Agency) Security Office has reviewed and declassified the following reports:

+ ST-A

AD-366748 -	XRD-65
AD-366747 ~	XRD-64
AD-366746 ^	XRD-63
AD-376826 ~	XRD-60
AD-376824 ~	XRD-58
AD-376825 ~	XRD-59
AD-376823 ~	XRD-57
AD-376822 ~	XRD-56
AD-376821 ~	XRD-55
AD-366743 ~	XRD-54
AD-376820 ~	XRD-53
AD-366742 ~	XRD-52
AD-366741 ~	XRD-51
AD-366740 ~	XRD-50-Volume-2
AD-366739 -	XRD-49-Volume-1
AD-366738 -	XRD-48
AD-366737 ^	XRD-47

SUBJECT: Declassification of Reports

AD-366736 -	XRD-46
AD-366735 -	XRD-45
AD-366723 -	XRD-37
AD-366721 -	XRD-35
AD-366717 -	XRD-31-Volume-2
AD-366716 -	XRD-30-Volume-1
AD-366751 -	XRD-68-Volume-2
AD-366750 -	XRD-67-Volume-1
AD-366752 -	XRD-69
AD-366744 -	XRD-61.

All of the cited reports are now **approved for public release**. **Distribution statement "A"** now applies.
