CORRELATIONS OF AIRCRAFT HIT DATA IN SOUTH VIETNAM (U)

(UNCLASSIFIED)

ABSTRACT

This report consists of 370 tables of correlations concerning hit data on various types of aircraft operating in South Vietnam.

The author draws no conclusions from the resulting tables at this time. They are published as information for interested agencies.

This report supersedes BRL Technical Note 1573.

INTRODUCTION

[REDACTED]

This report is a correlation of aircraft hit information and is limited to United States aircraft in South Vietnam. A similar report, BRL Technical Note Number 1573 was published in September 1965. This report supersedes that publication and differs only in that the data now covers the time period from July 1963 through December 1965. Data for the first quarter 1964 is not available at this time. (Present plans call for updating the data every six months or more frequently if required.)

The reader's attention is called to the increase in the number of aircraft types hit during the period from July 1965 through December 1965 (nine new aircraft types are now listed in Table A2 for example).

Data for this study were forwarded to the Ballistic Research Laboratories, Aberdeen Proving Ground, Maryland, by the Second Air Division, Thirteenth Air Force, USAF, APO 143 San Francisco, California. No effort was made to supplement these data with additional information from other sources. Therefore, the reader is cautioned about the completeness of the data and the ultimacy of the resulting tables.

As of 1 January 1965 the Ballistic Research Laboratories have been receiving aircraft hit and incident data on a daily basis via TWX messages having the following standardized format: Date/Local Time/Aircraft Type/Mission Type/UTM Coordinates/Altitude/Intensity of Enemy Fire and Weapon Type/Number of Hits and Aircraft Reaction. Prior to this date at least two different formats were used - each of which offered less information than the current TWX format.

The data concerning hits on all types of aircraft were coded for a high-speed digital computer. The code design was based on the TWX message format and for this reason a large number of unknowns appear in a few of the resulting tables. These coded data were then submitted as input to an "Information Recall" program. The program was designed so that a tabulation of the output could be used directly in this report.

Certain abbreviations were necessary to accomplish this end; these and some terms used throughout the tables are defined in the following section.

The tables were designed to display data for three general types of demands. The A, B, C-type tables present data as a function of time periods for users interested in correlating trends and changes with historical events in the South Vietnam conflict. The D-type tables are intended to separate the various factors of the threat encountered. The E-type tables are intended primarily for project managers and others interested in individual aircraft types.

Tables A4 (15 tables), B4 (9 tables), and C4 (3 tables) use the term "Aircraft Kill". An aircraft kill is defined as any aircraft reaction to being hit by enemy ground fire other than Continued to Fly; for example: Crash, Shot Down, Forced Landing, Mission Abort, etc.

The assignment of links, rules, and weights is optional.
