INTRODUCTION

This special bibliography was compiled by the staff of the Aeronautical Division Library at the request of O. H. Engen. The references cover the period 1959 - 1962, and were compiled from the following reference sources:

Aero Division Library Document Catalogs

Applied Science and Technology Index

Battelle Technical Review Abstracts

Business Periodicals Index

Engineering Index

While the titles to the various sections indicate their main content, to the exclusion of obviously allied subjects, no attempt has been made to be exhaustive. The selection of articles and books was arbitrary, based upon the parameters indicated in the bibliography request.

Therefore, while the range of subject treatment in the listed titles varies from popular and summary to quite technically complex, necessarily many fields have been included only to the extent of survey articles, with bibliographies listed for the use of those who wish to go further.
