FOREWORD

The report was prepared by the Central Research Division of the American Cyanamid Company under USAF Contract No. AF 33(616)-7958. This contract was initiated under Project No. 7340, "Non-Metallic and Composite Materials", Task No. 734007, "Coatings for Energy Utilization, Control and Protective Functions". The work was administered under the direction of the Directorate of Materials and Processes, Deputy for Technology, Aeronautical Systems Division, with Mr. Harold Hormann as project engineer.

This report covers work conducted from July 1960 to October 1962.

ABSTRACT

Publications in the field of vacuum ultraviolet spectroscopy have greatly increased in number during recent years, stimulated by the interest in space exploration and aided by the advent of commercial instrumentation. It appeared desirable to compile an extensive bibliography at this time. The bibliography is arranged alphabetically by senior author, with a four-letter code (called CODEN) for the journal reference. The format and presentation are suited for easy punching onto IBM punched cards for machine sorting. A subject index is provided to the more than 1300 references.

This technical documentary report has been reviewed and is approved.

Directorate of Materials & Processes

I. INTRODUCTION AND DESCRIPTION

This bibliography of papers concerned with the vacuum ultraviolet region of electromagnetic radiation has been compiled as an aid in locating information in the published literature. Wherever possible, the original article was consulted, both for content and for other references. Considerable latitude of judgment was exercised by the authors in decisions of inclusion or exclusion, and in indexing. Preference has frankly been given to articles in readily available journals and in the English language. Although this bibliography is more extensive than others recently compiled, it does not attempt to be exhaustively "complete".

Some use of International Business Machines (IBM) punched cards was made in compiling the various references. A simplified title or subject was given each article, short enough to be included with authors and reference on a standard IBM card. Therefore the reference list is composed of 80 or less letters and digits which may be punched directly into an IBM card, for further arrangements of references (by year, journal, or junior authors, for example). The index section was prepared from the simplified title or subject. Commonly occurring words have been omitted, such as "vacuum", "ultraviolet", "emission", "absorption", "intensities", and "spectrograph".

Pertinent books and sections of books have been included after the bibliographical listing by senior author, but are not numbered or indexed. A short supplemental bibliographical list has been included to cover certain references not available or checked at the time of the final numbering of the main list.

A recent report by Kelly (542) covers all the published atomic emission lines up to January 1959. L. Kasha and M. Kasha published "Molecular Electronic Bibliography" (see Book Section) covering publications of early workers in molecular quantum mechanics and molecular electronic spectroscopy. Most, but not all, of the references from these two works are included in this bibliography.

This bibliography was originally published with 548 references in July 1960, as Wright Air Development Division Technical Report 60-704.

II. LIST OF CODEN FOR JOURNALS

CODEN is a system of designating journals by a combination of four letters. It was developed by Dr. Charles Bishop of the Chronic Disease Research Institute, Buffalo, New York, and described in an article in "American Documentation", Vol. 4, 54 (1953). In 1957, CODEN was adopted by the Standard Data Subcommittee of Committee E-13 (Absorption Spectroscopy) of the American Society for Testing Materials, for use in its activities in searching the literature for infrared and ultraviolet spectra.

Manuscript released by the authors October 1962 for publication as an ASD Technical Documentary Report.

The CODEN used in this bibliography on vacuum ultraviolet spectroscopy are as follows:

VACUUM ULTRAVIOLET SPECTROSCOPY. Final re-
port, Feb 63, 44p. incl. 1300 refs.

Unclassified Report

Publications in the field of vacuum ultra-
violet spectroscopy have greatly increased
in number during recent years, stimulated
by the interest in space exploration and
aided by the advent of commercial instru-
mentation. It appeared desirable to com-
pile an extensive bibliography at this
time. The bibliography is arranged alpha-

(over)

betically by senior author, with a four-
letter code (called CODEN) for the journal
reference. The format and presentation are
suited for easy punching onto IBM punched
cards for machine sorting. A subject index
is provided to the more than 1300 references.
