STUDIES IN MACHINE TRANSLATION:
BIBLIOGRAPHY OF RUSSIAN
SCIENTIFIC ARTICLES

K. E. Harper, D. G. Hays and B. J. Scott

This research is sponsored by the United States Air Force under Project RAND—contract No. AF 49(638)-700 monitored by the Directorate of Development Planning, Deputy Chief of Staff, Research and Development, Hq USAF. Views or conclusions contained in this Memorandum should not be interpreted as representing the official opinion or policy of the United States Air Force.

PREFACE

This Memorandum is one of a series of studies describing work on automatic language data processing at The RAND Corporation. It is a revision of the bibliography published in RM-2069, October 1958. The itemized textual material has been stored on magnetic tape and is available for research purposes.

SUMMARY

This Memorandum, one of a series on computer applications to language study, is a catalogue of the Russian scientific articles currently available at The RAND Corporation on magnetic tape.

The text comprises twelve corpora of physics articles, four of mathematics, seven of astrobotany, and one of cybernetics. Altogether there are 586 articles, totalling 725,921 running words.

A general introduction to this area of research is given in Memorandum RM-2916-PR, while a description of the codes and formats used to represent this text is currently in preparation. The present paper is of most interest to system and procedure designers who require textual material for research or test purposes.

LIST OF RAND STUDIES IN MACHINE TRANSLATION	97

STUDIES IN MACHINE TRANSLATION--BIBLIOGRAPHY OF RUSSIAN SCIENTIFIC ARTICLES

1. INTRODUCTION

This document is one of a series describing the methods now in use for linguistic research at The RAND Corporation. The present paper catalogues the Russian scientific articles keypunched into IBM cards at The RAND Corporation and presently available on magnetic tape for research purposes.

2. CORPORA

Twenty-four corpora are described in this paper; Table 1 lists these corpora, noting the source publications and specifying the size of each corpus in terms of three quantities: number of articles, number of pages, and number of occurrences (running words).

Corpora 1 and 3 consist of articles selected at Michigan under the direction of A. Koutsoudas; the remaining corpora were prepared at RAND, with H. P. Edmundson chiefly responsible for article selection.

3. BIBLIOGRAPHY

Each of the following bibliographic entries contains both the Russian title and its English translation; the name of the author, transliterated into Roman characters by the RAND rules; the journal or book, volume, date, and

pagination of the original publication; and the size of the article in the same terms as are used in Table 1. When possible, the translations of titles were taken from the English table of contents published in Doklady Akademii Nauk SSSR; other titles were obtained from Soviet Physics. Some translations had to be prepared at RAND, under the direction of K. E. Harper and H. P. Edmundson. Dolores Mohr prepared and J. A. Wood edited many of the translations. Margaret Kivelson kindly reviewed much of the terminology in physics.
