FACULTY INVESTIGATORS:

S. A. SCHAAF, PROFESSOR OF ENGINEERING SCIENCES
L. TALBOT, ASSOCIATE PROFESSOR OF AERONAUTICAL SCIENCES
G. J. MASLACH, PROFESSOR OF AERONAUTICAL ENGINEERING

I. INTRODUCTION

Previous measurements of drag forces acting on cylinders normal to a rarefied gas flow¹ have been concentrated in the transition and near free molecule flow range of Knudsen number where direct comparison with existing theories could be made. Following the completion of that work it appeared desirable to extend the data to near continuum flow conditions. In addition, the analysis of previous data by normalization techniques² indicated a need to repeat certain tests in an attempt to reduce experimental scatter. It is the purpose of this report to present all results obtained to date, including previous work and new measurements involving three additional models, with a complete listing of all data which may be of value to those contemplating future theoretical work in this field.

II. EXPERIMENTAL METHOD

A. Experimental Equipment

All tests were performed with the equipment previously described.¹ The three new models were solid steel rods; 0.0265 inch diameter, 0.0500 inch diameter and 0.1103 inch diameter. These supplemented the former models, 0.0003 inch, 0.0009 inch, 0.0015 inch, 0.0033 inch and 0.010 inch diameter. The same adjustable length cylindrical shields were used to fix the length of model exposed to the stream. The slotted caps terminating the shields were rebored to provide a close fit for each new model. Thus the ratio of shield diameter to model diameter varied with each model. No additional model temperatures were obtained with the new larger models.

B. Experimental Procedures

All procedures and flow control methods previously described were continued for the tests involving the three larger models. The length of exposed model varied from approximately three quarters of an inch to approximately two inches. Data obtained during a given run were immediately reduced to permit a plot of aerodynamic force versus model length. This control curve was thus available before changes were made in the experimental setup. The linearity of this plot and the extrapolation of the force data for a zero length model were constantly checked. As before, small positive force intercepts were noted for the theoretical zero length model for most of the runs.

III. DATA REDUCTION AND ERROR ANALYSIS

Standard methods of data reduction were employed to determine the free stream flow properties and the aerodynamic forces acting on the model. For the larger models the uncertainty in the quantity C_x was reduced due to the greater precision possible in the measurement of the model diameters. The larger forces, in the gram range, resulted in sizable spring extension and thus a reduction of this error source. The total of all error contributions in the determination of C_x for the three new models in all flow conditions varied from 1.5 to 2.0%.

It is interesting to note that the noticeable scatter in the original Mach 4 results using a 0.0033 inch nominal diameter model was traced to a change in model diameter in the course of the tests. The model, a butt welded thermocouple, was broken, repaired and remounted. In the refabrication the thermocouple joint in the center of the model length was

hand polished, resulting in a reduction in diameter of approximately 10%. New tests were run with this new cylinder and included in the final results for all models. These results are presented in Figures 1, 2 and 3 with a normalized presentation in Figure 4.

IV. RESULTS

The experimental results indicate a smooth transition from continuum drag coefficient values to predicted free molecular flow drag coefficients. Normalization of the measured drag values reveals a marked Mach number dependency. Future experimental programs are indicated, including extension to higher and lower Mach numbers, and a detailed pressure survey of the entire cylinder surface.

San Diego 12, California (1)

General Motors Corporation
Defense Systems Division
Box 7
Santa Barbara, California
Attn: Gall T. Fleisher (1)

Helidyne Corporation
137 East Colorado Boulevard
Pasadena, California
Attn: Dr. Saul Feldman (1)

Massachusetts Institute of Technology
Lincoln Laboratory
P. O. Box 73
Lexington 73, Massachusetts (1)

Attn: Mary A. Grimes, Librarian (1)

Attn: Seymour Edelberg (1)

Attn: Glen F. Pipper (1)

Radio Corporation of America
Missile and Surface Radar Division
Morristown, New Jersey
Attn: Gertrude Pashner
Eng. Library 127-223 (1)

Office of Technical Services
Department of Commerce
Washington 25, D. C. (1)

Professor A. Donnelly
Institute for the Study of Metals
University of Chicago
5640 Ellis Avenue
Chicago 37, Illinois (1)

Professor R. F. Harrington, Head
Department of Aeronautical Engineering
University of Cincinnati
Cincinnati 21, Ohio (1)

Professor T. L. B. Iley
Department of Physics
University of Florida
Gainesville, Florida (1)

Dr. R. Kendall Raynolds
Physics Department
University of Houston
3801 Gullen Boulevard
Houston, Texas (1)

Professor A. M. Taub
Digital Computer Laboratory
University of Illinois
Urbana, Illinois (1)

Professor H. S. Stillwell, Chairman
Department of Aeronautical and
Astronautical Engineering
University of Illinois
Urbana, Illinois (1)

Professor H. K. Gries
University of Maryland
College Park, Maryland (1)

Professor Hal
Institute for Fluid Mechanics and
Applied Mathematics
University of Maryland
College Park, Maryland (1)

Professor R. Burgers
Institute for Fluid Mechanics and
Applied Mathematics
University of Maryland
College Park, Maryland (1)

Professor C. E. Uhlmann
The Rockefeller Institute
New York 21, New York (1)

Professor A. Kuehle
Department of Aeronautical Engineering
University of Michigan
Ann Arbor, Michigan (1)

Professor W. C. Nelson
Department of Aeronautical Engineering
University of Michigan
Ann Arbor, Michigan (1)

Professor Steve M. Siegel
Radiation Laboratory
The University of Michigan
201 Catherine Street
Ann Arbor, Michigan (1)

Dr. M. A. Slonid
Physics Department
University of Pittsburgh
Pittsburgh, Pennsylvania (1)

Professor T. M. Donahue
University of Pittsburgh
Pittsburgh, Pennsylvania (1)

M. J. Thompson
Defense Research Laboratory
University of Texas
P. O. Box 8828
Austin, Texas (1)

The Library
Institute of Astrophysics
University of Toronto
Toronto 3, Ontario (1)

Professor M. A. Cook, Director
Experimental Research Group
University of Utah
Salt Lake City, Utah (1)

A. R. Kitchin, Director
Research Laboratories for the
Engineering Sciences
Thorton Hall
University of Virginia
Charlottesville, Virginia (1)

Department Librarian
Department of Aeronautical Engineering
University of Washington
Seattle 5, Washington (1)

United Aircraft Corporation
Research Laboratories
400 Main Street
East Hartford 3, Connecticut (1)

Dr. Donald E. Davenport, Director
Stanford Research Institute
Menlo Park, California (1)

Dr. Duval
Stanford Research Institute
Poultier Laboratories
Menlo Park, California (1)

Scientific and Technical Information
Facility
Attn: NASA Representative
P. O. Box 3700
Scheds, Maryland (1)

Professor Walter Wall
Department of Aeronautical Engineering
Stanford University
Stanford, California (1)

Dr. Manfred A. Heckl
Bolt, Beranek and Newman, Inc.
50 Houston Street
Cambridge 38, Massachusetts (1)

Withers, Incorporated
380 Putnam Avenue
Cambridge 38, Massachusetts (1)

AVCO Research and Advanced
Development Division
201 Lowell Street
Wilmington, Massachusetts (1)

Attn: Chief of Aerodynamics (1)

Professor R. Courant
Institute of Mathematical Sciences
New York University
251 Avery Place
New York 3, New York (1)

Dr. J. Menkes
Institute for Defense Analyses
1666 Connecticut Avenue, N. W.
Washington 9, D. C. (1)

Professor J. M. Clarke
Division of Engineering
Brown University
Providence 12, Rhode Island (1)

Professor Walter C. Vincenti
Department of Aeronautics and
Astronautics
Stanford University
Stanford, California (1)

Dr. J. J. Chelarian
Armour Research Foundation
Illinois Institute of Technology
10 West 35th Street
Chicago 16, Illinois (1)

Professor R. Vaglio-Laurin
Aerodynamics Laboratory
Polytechnic Institute of Brooklyn
527 Atlantic Avenue
Brooklyn, New York (1)

Stanford Research Institute
315 Savannah Avenue
Menlo Park, California
Attn: Hyles R. Berg (1)

Professor Ting Li
Department of Aerospace Engineering
University of Cincinnati
Cincinnati 21, Ohio (1)

Professor D. Minster
Department of Mechanical Engineering
Northwestern University
Technological Institute
Evanston, Illinois (1)

Yale University
Neon Laboratory
Attn: Library
400 Temple Street
New Haven 10, Connecticut (1)

Professor R. F. Pralstrin
M. I. T.
Department of Mechanical Engineering
Room 3-246
Cambridge 38, Massachusetts (1)

A. Reifman
Aerophysics Research Corporation
2444 Jishir Boulevard
Santa Monica, California (1)

Army Missile Command
Redstone Arsenal, Alabama
Attn: Mr. W. L. Lieber
Technical Library (1)

F. Haynes
