Introduction

The Naval Medical Research Section of Joint Task Force ONE was assigned the responsibility for the biological and medical research during Operation Crossroads.

Animals, biological materials and instruments were exposed on selected target ships during the air burst of Test ABLE and the underwater detonation of Test BAKER. In addition to its own studies, the Section acted as agent for other organizations in the transportation, placement and recovery of materials primarily of interest to those groups.

Details concerning the study of the items exposed during the tests are the subject of other appendices. This report is primarily concerned with the location of the animals and other materials on the target ships and the associated ranges and bearings in relation to the point of detonation.

Distribution and Collection of Animals and Materials.

The animals and materials to be exposed to the Test ABLE and BAKER bomb detonations were initially housed on the USS BURLESON (APA 67) assigned to the exclusive use of the Section. From there they were conveyed in small boats to their respective destinations on the target ships by the Target Ship Officer, to each of whom a group of target ships had been assigned. It was their task to supervise the placement and recovery of the animals and other materials in designated locations and to maintain records of each item so placed and later recovered after the tests.

The Target Ship Officers were accompanied by photographers who

took pictures of each item in its location on the target ships. This procedure was followed after the tests before the materials were removed for return to the USS BURLERSON.

The tables of this report giving the ship and location of animals and materials were compiled from the Material Location Forms of the Target Ship Officers. The photographs were used to check the accuracy of the written forms and undoubtedly prevented many of the errors which otherwise would have occurred during such a large scale operation.

Ranges and bearings of the locations on the target ships relative to the bomb detonation were calculated in the case of Test ABLE from ship plans and charts of ship positions. For Test BAKER only range and relative bearing of burst from the bow of the ship are given since the radiation effects of an underwater burst are not as critically a function of distance as in an air burst. The figures for Test BAKER are taken from tables provided by the Technical Director of the Task Force.

Information regarding the placement of animals and materials on target ships is given in the 16 tables which follow.

Index of Tables

Table 1. Location and Relative Bearing of Burst (Test ABLE) from Bow of Target Ships.

This table lists code number and name of ship, range, slant range, relative bearing and angular altitude of burst from the bow.

Table 2. Location of Individual Stations on Target Ships Relative to Burst (Test ABLE).

Here is listed code number and name of ship, code number of location (station on ship), location, slant range, relative bearing and angular altitude of burst referred to the individual station.

Table 3. Location and Relative Bearing of Burst (Test BAKER) from Bow of Target Ships.

This table gives code number and name of ship, range and relative bearing of burst relative to the bow of the target ships.

Table 4. Target Ships, Test Locations and Test Materials (Test ABLE).

The items located at each station on each ship are given here with code number of ship, code number of location and code number of item.

Table 5. Location of Goats (Test ABLE).

The individual goats are given by code number together with their sex and location.

Table 6. Location of Pigs (Test ABLE).

The individual pigs are listed by code number, with sex and location.

Table 7. Location of Rats (Test ABLE).

Rat code number, ship and location are given in Table 7.

Table 8. Location of Cloth Sample Panels (Test ABLE).

This table gives the location of the cloth sample panels used for thermal radiation estimates. More details on location will be found in Appendix No. 18.

Table 9 a and b. Location of Neurospora crassa samples.

See Appendix No. 16 for details of this study.

Table 10. Location of Department of Agriculture Grain Insect Packets, (Test ABLE).

Packages containing grain infested with grain insects were placed in locations given in Table 10.

Table 11. Location of Department of Agriculture Seed Packets.

Selected varieties of seeds were packaged and placed in locations given in this table.

Table 12. Location of Chemical Radiation Packets (Test ABLE).

These packets contained compounds of various elements intended for a determination of neutron flux. Their locations are given in this table.

Tables 13 a and b. Location of Victoreen Condenser Roentgen Meters, Test ABLE.

These tables give the locations of the meters used to determine gamma ray intensities at the animal stations.

Table 14. Location of Drums Containing Biological Warfare Agents.

Simulants of biological warfare agents were placed in the locations given in this table.

Table 15. Location of Pigs (Test BAKER).

Pigs were placed in the locations given in table 15 during Test BAKER.

Table 16. Location of Rats (Test BAKER).

Rats were located on four target ships during Test BAKER as given in this table.

MEMORANDUM FOR DEFENSE TECHNICAL INFORMATION CENTER
ATTENTION: OMI/Mr. William Bush

SUBJECT: Declassification of Reports

The Defense Special Weapons Agency (formerly Defense Nuclear Agency) Security Office has reviewed and declassified the following reports:

AD-366718✓	XRD-32-Volume 3	
AD-366726✓	XRD-12-Volume 2	
AD-366703✓	XRD-16-Volume 1	
AD-366702✓	XRD-14-Volume 2	
AD-376819L✓	XRD-17-Volume 2	
AD-366704-	XRD-18	
AD-367451✓	XRD-19-Volume 1	
AD-3667005-	XRD-20-Volume 2	AD-366705
AD-376028L-	XRD-4	
AD-366694✓	XRD-1	
AD-473912✓	XRD-193	
AD-473891-	XRD-171	
AD-473899✓	XRD-163	
AD-473887-	XRD-166	
AD-473888-	XRD-167	ST-A 28 JAN 80 made target
AD-473889✓	XRD-168
