PICATINNY ARSENAL, DOVER, NEW JERSEY

ABSTRACT

The papers presented at technical conferences on plastic materials and related technology, within a one year period ending 5 March 1965 have been listed, indexed by subject, and compiled by material, type of technical data, and military application. Over 550 papers from 23 conferences have been covered. Included are a bibliography, author index, summary of new material developments, and a list of applications and programs sponsored by the Department of Defense and the National Aeronautics and Space Administration.

The conferences covered are - American Chemical Society: Division of Organic Coatings and Plastics Chemistry - American Institute of Aeronautics and Astronautics: 5th Annual Structures and Materials Conference - American Physical Society: Division of High Polymer Physics - British Plastics Federation: Fourth International Reinforced Plastics Conference - Electronic Packaging and Production Magazine: National Electronic Packaging and Production Conference - National Academy of Sciences - National Research Council: Electrical Insulation- 1964 Annual Report - Society of Aerospace Material and Process Engineers: Adhesives and Elastomers for Environmental Extremes, 7th National Symposium - Society of Plastics Engineers: 21st Annual Technical Conference; ABS Plastics (RETEC - Regional); Advances in Moldmaking and Mold Design (RETEC); Engineering with Thermoplastics (RETEC); Extrusion - Materials, Theory and Applications (RETEC); Plastics and Adhesives in the Space Age (RETEC); Plastics Foams (RETEC); Plastics in the Electrical Industry (RETEC); Plastic Pipe: Design, Fabrication and Markets (RETEC); Plastics Sandwich Laminates (RETEC); Reinforced Plastics in Transportation (RETEC); Rigid PVC - Creativity, Versatility, Progress (RETEC); Stability of Plastics (RETEC) - Society of the Plastics Industry: 20th Annual Technical Conference, Reinforced Plastics Division - Southern Research Institute: Symposium on Polypropylene Fibers - U. S. Army Electronics Laboratories, Ft. Monmouth: 13th Annual Symposium, Technical Progress in Communication Wires and Cables.

SECTION 1. INTRODUCTION AND DISCUSSION

This is the fifth annual report by the Plastics Technical Evaluation Center on those technical conferences which have worthwhile information and data on plastic materials, applications and related technology. 552 papers presented at 23 technical conferences over the year period ending March 5, 1965 are covered.

These reports are intended to permit the reader to determine quickly the following:

- What has been presented on a particular subject; for example - "ablation".
- The types of materials and data contained in each paper presented.
- All papers which contain information on a particular type of material; for example - "epoxy".
- All papers which contain a particular type of data; for example - "creep".
- All papers which discuss military uses of plastics; for example - "ammunition closing plug".
- All the papers presented by a specialist or authority in the field.
- The major technical conferences containing information on plastics, presented during one year.

During the past year numerous new materials were reported on. The number of new plastic materials introduced per year is increasing rather than decreasing. Some of the new materials reported on include:

- Polycycloamide. High molecular weight polyamides based on 1, 4 cyclohexylenedimethylene suberamide (ref. 39).
- Ionomer resins. A new family of thermoplastic resins which contain inter and intra ionic bonds in addition to the basic covalent bonds present in all high molecular weight polymers (ref. 40).
- Epoxy-acrylate resin. Used with or without styrene as the binder in the reinforced plastics field (ref. 51).
- Chlorostyrene. A cross linking agent in place of styrene for the reinforced plastics field using polyester resins (ref. 98).
- Polyimide. Applications of these high temperature materials are increasing for varnish, film, and fabricated parts. Market development quantities of "H Film" to be available in the first half of 1965 (ref. 242).
- Thermoplastics. The building industry is seeing a market increase in the use of thermoplastics. These developments are reviewed in reference 253.

- Styrene-maleic anhydride resins as binders in the reinforced plastics field (ref. 376).
- Electrically conducting polymers based on vinylpyridinium TCNQ⁻¹ (ref. 378).
- Interfacial anodic polymers from benzene in hydrogen fluoride (ref. 381).
- Resins from polyhexaallylmelamine and related polymers (ref. 389).
- Polyphenylene oxide. A new family of thermoplastics available from pilot plant in 1965. Paper presented at SPE ANTEC but was not included in preprint. Article in Modern Plastics, December 1964.
- Polyparaxylylene capacitors. This polymer is deposited from vapor directly on a metal substrate. Is example of a new plastic and a new polymerization technique. The capacitor announcements were made in 1964 (Union Carbide) and references on the polymer in 1965 (p. 73-83, Polymer Preprints, ACS, Div. Pol. Chem., Detroit, April 1965, Vol. 6, No. 1).

Department of Defense uses plastics in many applications and sponsors research in many areas of plastics technology. A listing of conference papers which contain information on specific military items (ammunition, armor, boats, boosters, fuel tanks, etc.) and programs sponsored by the Department of Defense or the National Aeronautics and Space Administration is presented in Section 7.

This report includes only those conferences having information on plastics where preprints or proceedings were issued and available to PLASTEC, and which were concerned with or potentially useful to the Department of Defense. Some conferences have thus been omitted. If an organization feels that the proceedings of its technical conferences should be considered for inclusion in the next conference review report (covering March 1965 to March 1966), it is suggested that a copy of the proceedings be sent to PLASTEC. Comments and/or suggestions on this report are invited.

THIS CENTER DOES NOT DISTRIBUTE COPIES OF CONFERENCE PROCEEDINGS. THE PROPER SOURCES FOR SUCH DOCUMENTS ARE IDENTIFIED IN THE BIBLIOGRAPHY (SECTION 9), AT THE HEADING OF EACH MEETING REPORTED.

SECTION 2. ORGANIZATION OF REPORT

This report has seven major divisions: code sheet; subject index of conference papers; a compiled list of reference numbers of conference papers which contain information on a particular type of plastic material; a compiled list of reference numbers of conference papers which contain a particular type of data; a subject index of military applications involving plastics; a bibliography of conference papers; and an author index. Each division is now discussed briefly, to simplify the use of this report.

Code Sheet Assembly (Section 3, Section 8)

A numerical code system is used to describe the contents of each paper; that is, to tell the reader which plastic material is discussed and what type of data are presented. The code sheet assembly consists of three sections:

- The CODE SHEET proper, with the numerical listing of the code numbers and the meaning of each; for example - 1.8 signifies "Epoxy" (material); or 2.1 signifies "Acoustic" (type of data).
- The breakdown of plastic material sub-groups appearing in the CODE SHEET; for example - 1.2 signifies "Acrylic", which includes "Polymethylmethacrylate" and "Methylmethacrylate - styrene copolymer".
- An alphabetical listing of polymers, for example - "ABS" is represented by code number 1.20; "Acetal" by 1.1; "Acrylic" by 1.2.

Two code sheets are provided for simplification of handling. One (Section 3) is in the forepart of the report, and the other (Section 8) is before the bibliography.

Subject Index (Section 4)

The SUBJECT INDEX is presented in two columns: "Subject", and "Reference Number".

The principal subjects discussed in the various papers are listed alphabetically and margined. The variations upon the principal subject are sublisted, in alphabetical order also, and indented. For example, the reader may refer to the subject "Ablation". Thereunder note: evaluation tests (ref. 471); exit nozzle processing (ref. 157); mg. oxide fiber-phenolic (ref. 290); etc. It is suggested that the reader check all the variations under the subject of interest, as some of the principal subjects have over 50 variations.

The reference numbers were assigned arbitrarily to the conference papers by the authors. The numbers have no significance outside of the report. They appear in the left-hand column of the BIBLIOGRAPHY and in the right-hand column of the SUBJECT INDEX: and they are also used as the medium of reference in the various other lists.

Compiled Lists of Papers on Plastic Materials and on Data (Sections 5 and 6)

All the conference papers which contain information on a particular plastic material (for example, 1.8 -- "Epoxy") or which contain a particular type of data (for example, 2.27 -- "Creep") have been compiled into lists. There are: COMPILED LISTS OF PAPERS ON INDIVIDUAL PLASTIC MATERIALS (Section 5) and COMPILED LISTS OF PAPERS HAVING SPECIFIC TYPE OF DATA ON THE PROPERTIES OF PLASTICS (Section 6). To find all the references having some type of information on epoxy materials, one would check code 1.8 in Section 5. This group is more extensive than the "epoxy" list in the SUBJECT INDEX. Only those references which contain a substantial amount of information on "epoxy" are included in the SUBJECT INDEX, whereas the list in Section 5 was designed to find all the references on a material. To locate all those references which contain a particular type of data, either tabular or graphical, one would check Section 6*. For example, to find references containing weathering data on epoxy materials, one would search for the reference number which appear in both 1.8 of Section 5 ("epoxy") and 2.23 of Section 6 ("Weathering"). Reference numbers 70 and 389 are the only ones which appear in both 1.8 and 2.23, and therefore it can be assumed that these are the only papers in this report possibly containing weathering data on epoxy materials. In this usage, Section 5 and Section 6 are a coordinate indexing system. To facilitate usage of this system, the reference numbers are arranged in numerical order in all the subdivisions (35 subdivisions in Section 5 and 43 in Section 6).

Subject Index of Papers on Applications and/or Investigations Sponsored by Department of Defense and the National Aeronautics and Space Administration (Section 7)

The conference papers were searched in order to locate those which contain information on specific military uses of plastics and military projects on plastics. Reference numbers of those papers were then compiled and indexed alphabetically and the results are presented in Section 7. For example, the reference number 245 under

* However, if a paper discussed a property or test method, etc., without including data, it would not be listed in this group.

the subject, ammunition, has information on plastics in military ammunition and can be located in the BIBLIOGRAPHY (Section 9). There are many papers on military sponsored projects which are not included in this listing because the authors did not acknowledge this.

Bibliography (Section 9)

The BIBLIOGRAPHY lists the papers presented at the 23 conferences covered in this report. Complete identification of the individual conference precedes the citations of the papers which were presented therein, including advice as to how to procure the preprint. The citations include: the title of the presentation, its author(s), the company affiliation, the section of the preprint or proceedings in which the paper appears, the number of pages comprising the paper and code description. The code descriptions tell the reader if the paper has information on materials and (if so) on which particular materials; and if the paper contains data (tabulated or graphic information) and (if so) on which types of data. For example, Reference No. 1, Thermal Processing Stability of Vinyl Chloride Plastics, has the code numbers (1.34, 2.38, 2.40). The following may be assumed from the code numbers used to describe that reference: that the paper has information on polyvinyl chloride (1.34) and that included are the following types of data: Rheological (2.38), and Thermal other than ablation and flammability (2.40). In this usage, the code is intended to tell the reader what is in the particular reference. The conferences reported are:

Author Index (Section 10)

An AUTHOR INDEX has been included to permit the easy location of the work of a particular author. It is recognized that a person may be known for his authority in a particular field and the reader may wish to check on his output; or that the reader may wish to follow through on a rumor that a particular specialist had given a paper some-where. To help in such cases, this index has been compiled. Reference is again, by number, to the particular paper(s) in the BIBLIOGRAPHY.

SECTION 3. CODE SHEET ASSEMBLY

1. PLASTIC/POLYMERIC MATERIAL TYPES

(See "Breakdown..." adjacent)

- 1.1 Acetal
- 1.2 Acrylic group
- 1.3 Allylics
- 1.4 Amino
- 1.5 Butadiene-styrene
- 1.6 Cellulosics
- 1.7 Elastomer (other than listed herein)
- 1.8 Epoxy
- 1.9 Fluorocarbon
- 1.10 Inorganic (no carbon in polymer backbone; see 1.33 for silicone)
- 1.10A Ionomer
- 1.11 Phenolic
- 1.12 Phenyl-silane, Phenylene oxide
- 1.12A Phenyl oxide
- 1.13 Poly (amide)
- 1.14 Poly (carbonate)
- 1.15 Poly (ester); alkyd
- 1.16 Poly (ether)
- 1.17 Poly (ethylene)
- 1.17A Ethylene-copolymers
- 1.18 Poly (imide)
- 1.19 Poly (propylene)
- 1.20 Poly (styrene) group
- 1.21 Poly (sulfide)
- 1.22 Poly (urethane)
- 1.23-1.32 Semiorganic polymers (Carbon+ element listed below in backbone)
- 1.23 Aluminum in backbone
- 1.24 Arsenic in backbone
- 1.25 Boron in backbone
- 1.26 Chromium in backbone
- 1.27 Nitrogen in backbone (excluding polyamide and polyurethane)
- 1.28 Phosphorus in backbone
- 1.29 Sulphur in backbone
- 1.30 Tin in backbone
- 1.31 Titanium in backbone
- 1.32 Other element in backbone
- 1.33 Silicone (see 1.12 for phenyl silane)
- 1.34 Vinyls
- 1.35 Unidentified

2. TABULATED OR GRAPHICAL DATA ON THESE PROPERTIES AND/OR UNDER THE ENVIRONMENT LISTED HEREIN

- 2.1 Acoustic
- 2.2 Adhesive
- 2.3 Aging (except 2.16, 2.23)
- 2.4 Effect of chemicals (except 2.5-2.12)
- 2.5 Compatibility
- 2.6 Effects of water or moisture
- 2.7 Molecular/polymer structure
- 2.8 Permeability, vapor transmission
- 2.10 Stress cracking, crazing
- 2.11 Toxicity
- 2.12 Weight loss
- 2.13-2.16 Electrical properties
- 2.13 Excepting 2.14-2.16
- 2.14 Arc, corona, tracking, treeing
- 2.15 Electric strength
- 2.16 Thermal aging of elec comp
- 2.17-2.23 Properties under these environments
- 2.17 Environments except 2.18-2.23
- 2.18 Irradiation
- 2.19 Vacuum
- 2.20-2.23 Properties at these conditions
- 2.20 Prop. at temp below -100°F
- 2.21 Prop. at temp (-100°F to +32°F)
- 2.21A Prop. at temp (+150°F to 500°F)
- 2.22 Prop. at temp over 500°F
- 2.23 Weathering
- 2.24-2.36 Mechanical properties
- 2.24 Other than 2.25-2.36
- 2.25 Bearing
- 2.26 Cushioning; damping
- 2.27 Creep
- 2.28 Compression
- 2.29 Dynamic loading
- 2.30 Fatigue
- 2.31 At high load rate
- 2.32 Hoop tension; burst; buckling
- 2.33 Modulus; compliance
- 2.34 Shear
- 2.35 Stress relaxation
- 2.36 Stress-strain curve
- 2.36A Dimensional stability
- 2.37 Optical incl infrared spectra
- 2.38 Rheological
- 2.39 Surface
- 2.40-2.42 Thermal
- 2.40 Thermal other than 2.41-2.42
- 2.41 Ablation
- 2.42 Flammability
- 2.43 Thermodynamic

Breakdown of Plastic Material Sub-groups in Code Sheet

Some materials listed under 1 in code sheet cover several groups - i.e., 1.11 Phenolic covers Phenol-formaldehyde and Phenol-furfural. Following are the material subgroups used in this report.

1.2	Acrylic Polymethyl methacrylate Methyl methacrylate-styrene copolymer	1.23-1.32	Semiorganic polymer If a polymer containing two or more such elements is listed - i.e., polybenzborimidazolines, then it is listed in each group, i.e., 1.25, 1.27.
1.3	Allylic Diallyl phthalate Other diallyl materials	1.25	Boron in polymer backbone Polybenzborimidazolines Polyborophane
1.4	Amino Urea formaldehyde Melamine formaldehyde	1.27	Nitrogen in polymer backbone (Aliphatic polyamide, i.e., nylon and the urethanes are not listed in this group.) Polybenzimidazole Polybenzborimidazolines Polyoxadiazole Polyhydrazide Polyphenylene triazole Polythiazole
1.6	Cellulosic Ethyl cellulose Cellulose acetate Cellulose propionate Cellulose acetate butyrate Cellulose nitrate	1.28	Phosphorus in polymer backbone Polyborophane
1.8	Epoxy Epoxy casting and molding materials Epoxy novolac Epoxy polyolefin Epoxidized polybutadiene Phenoxy	1.29	Sulphur in polymer backbone (excluding polysulfides) Polythiazole Polyphenylene sulfide Polytriazinylene sulfide
1.9	Fluorocarbon Polytetrafluoroethylene Fluorinated ethylene propylene polymers Polychlorotrifluoroethylene Polyvinylidene fluoride	1.34	Vinyls, vinyl chloride Vinyl acetate Vinyl alcohol Vinyl butyral Vinyl chloride Vinyl chloride-acetate Vinylidene chloride Vinyl formal Polyvinylidene chloride
1.11	Phenolic Phenol-formaldehyde Phenol-furfural		
1.20	Polystyrene Group (see also 1.5) Polystyrene Styrene-acrylonitrile copolymer Acrylonitrile-butadiene-styrene terpolymers and blends		

Both the main group - i.e., Phenolic - and subgroup - i.e., Phenolformaldehyde and Phenol-furfural - are listed by their chemical nomenclature. In order to determine the chemical group of a particular commercial plastic material - i.e., Teflon, or the trade name of particular materials, it is suggested that the reader refer to the published lists of plastic material trade names. One source is the Modern Plastics Encyclopedia.*

* Modern Plastics Encyclopedia, published yearly.
Modern Plastics Magazine, New York City, Breskin Publications, Bristol, Conn.

Alphabetical List of Polymer Sub-Groups

ABS	1.20	Phenyl-silane	1.12
Acetal	1.1	Phenylene oxide	1.12A
Acrylic	1.2	Poly (allomer).	1.17A
Acrylonitrile-butadiene-		Poly (amide)	1.13
styrene terpolymers & blends .	1.20	Poly (benzborimidazoline) . . .	1.25; 1.27
Alkyd	1.15	Poly (benzimidazole)	1.18; 1.27
Allylic	1.3	Poly (borophane)	1.25; 1.28
Amino	1.4	Poly (carbonate)	1.14
Butadiene-styrene	1.5	Poly (chlorotrifluoroethylene) .	1.9
Cellulose acetate	1.6	Poly (ester)	1.15
Cellulose acetate butyrate. . .	1.6	Poly (ether)	1.16
Cellulose propionate.	1.6	Poly (ethylene)	1.17
Cellulose nitrate	1.6	Poly (hydrazide).	1.27
Cellulosic	1.6	Poly (imide)	1.18
Diallyl phthalate	1.3	Poly (methyl methacrylate) . . .	1.2
Elastomer (other than listed		Poly (oxadiazole)	1.27
herein)	1.7	Poly (oxymethylene).	1.1
Epoxidized		Poly (phenylene oxide)	1.12A
polybutadiene	1.8	Poly (phenylene sulfide).	1.29
Epoxy	1.8	Poly (phenylene triazole)	1.27
Epoxy novolac	1.8	Poly (propylene).	1.19
Epoxy polyolefin.	1.8	Poly (styrene).	1.20
Ethyl cellulose	1.6	Poly (sulfide)	1.21
Ethylene-ethyl acrylate		Poly (tetrafluoroethylene). . . .	1.9
copolymer	1.17A	Poly (thiazole).	1.27; 1.29
Ethylene-propylene copolymer .	1.17A	Poly (triazinylene sulfide) . . .	1.29
Fluorinated ethylene propylene		Poly (urethane)	1.22
polymers	1.9	Poly (vinyl chloride)	1.34
Fluorocarbon	1.9	Poly (vinyl ether)	1.16
FEP fluorocarbon	1.9	Poly (vinylidene chloride).	1.34
Inorganic polymer (no carbon		Poly (vinylidene fluoride). . . .	1.9
in backbone: see 1.33 for		Semiorganic polymer	1.23, 1.32
Silicone)	1.10	Silicone	1.33
Ionomer	1.10A	Styrene-acrylonitrile copolymer	1.20
Melamine formaldehyde	1.4	Urea formaldehyde	1.4

Processing polyethylene -----	264
Radiated cross-linked in- sulation -----	212
Silicone rubber insulation ---	215

SECTION 5. COMPILED LISTS OF PAPERS ON INDIVIDUAL PLASTIC MATERIALS

(By Reference Number)

NOTE: Each paper listed has information on the particular material. For additional information on particular materials, see: CODE SHEET assembly, "Breakdown of Plastic Material Sub-Groups in Code Sheet".

Code

- 1.1 Acetal
33, 41, 122, 249, 250, 252, 326, 347, 374, 455, 496, 519

- 1.2 Acrylic Group
26, 29, 35, 51, 59, 75, 77, 80, 99, 108, 111, 122, 158, 178, 189, 224,
230, 236, 250, 253, 266, 344, 347, 349, 365, 368, 396, 398, 399, 401,
403, 404, 405, 418, 432, 452, 482, 491, 494, 496, 517, 525, 530

- 1.3 Allylics
25, 109, 145, 347, 348, 350, 353, 403, 440, 441

- 1.4 Amino
92, 216, 287, 347, 348, 349, 354, 376, 403, 404

- 1.5 Butadiene - styrene
(None)

- 1.6 Cellulosics
29, 35, 74, 178, 189, 224, 236, 239, 250, 330, 332, 365, 368, 398, 403,
452, 462, 528, 531

- 1.7 Elastomer (other than listed herein)
197, 199, 210, 226, 231, 233, 235, 253, 281, 332, 366, 367, 375, 398,
403, 404, 455, 458, 472, 474, 478, 482, 484, 518, 524, 529, 536, 538,
545

- 1.8 Epoxy
25, 27, 28, 42, 45, 51, 54, 69, 70, 71, 72, 73, 86, 87, 91, 92, 94, 95,
99, 105, 108, 118, 119, 122, 123, 134, 135, 136, 138, 139, 145, 148,
149, 150, 151, 152, 154, 155, 168, 169, 177, 190, 216, 217, 218, 219,
220, 221, 223, 224, 232, 281, 286, 287, 288, 289, 291, 292, 293, 294,
295, 296, 297, 298, 328, 340, 344, 345, 348, 349, 350, 354, 355, 357,
358, 359, 372, 376, 388, 389, 404, 405, 406, 407, 408, 409, 410, 411,
412, 413, 414, 415, 416, 417, 418, 441, 442, 443, 444, 445, 451, 455,
456, 457, 458, 461, 462, 463, 464, 465, 469, 474, 477, 481, 482, 485,
488, 494, 498, 499, 500, 506, 512, 515, 517, 538, 542

- 1.9 Fluorocarbon
38, 81, 178, 189, 191, 197, 212, 213, 214, 216, 236, 344, 349, 350,
367, 370, 396, 398, 451, 467, 469, 470, 476, 478, 480, 483, 484, 517

Code

- 1.10 Inorganic
(None)
- 1.10A Ionomer
174
- 1.11 Phenolic
10, 25, 44, 52, 53, 54, 92, 107, 109, 118, 124, 151, 175, 177, 224, 227,
232, 285, 286, 287, 288, 289, 290, 291, 292, 295, 338, 345, 347, 348,
349, 351, 352, 353, 354, 373, 376, 389, 391, 405, 415, 455, 458, 461,
462, 463, 464, 465, 481, 496, 498, 499, 502, 507, 509, 517, 542
- 1.12 Phenyl - silane
151, 455, 464, 465
- 1.12A Phenyl oxide
(None)
- 1.13 Poly(amide)
6, 26, 39, 41, 189, 191, 197, 212, 224, 230, 236, 241, 244, 250, 288,
289, 291, 293, 294, 295, 365, 368, 398, 399, 401, 405, 452, 455, 459,
460, 463, 465, 467, 469, 474, 477, 496, 517, 521, 525, 542
- 1.14 Polycarbonate
14, 26, 35, 41, 74, 122, 189, 205, 239, 246, 252, 266, 289, 347, 349,
405, 496
- 1.15 Polyester; Alkyd
24, 55, 83, 92, 96, 97, 98, 99, 100, 101, 102, 106, 111, 116, 146
147, 158, 159, 160, 170, 177, 179, 189, 191, 193, 197, 204, 205, 206,
216, 224, 239, 241, 285, 287, 291, 295, 327, 341, 343, 344, 345, 346,
347, 348, 349, 352, 365, 371, 373, 389, 390, 392, 401, 404, 405, 414,
417, 418, 441, 449, 451, 484, 485, 488, 489, 490, 491, 491a, 492, 494,
495, 496, 497, 498, 499, 503, 505, 507, 509, 510, 511, 512, 516, 517,
521, 541
- 1.16 Polyether
247, 289, 295, 467
- 1.17 Polyethylene
19, 20, 21, 22, 26, 49, 56, 57, 58, 59, 60, 74, 75, 83, 84, 85, 90, 189,
191, 193, 195, 196, 197, 200, 202, 205, 207, 209, 211, 214, 215A, 227,
228, 233, 236, 239, 241, 247, 250, 253, 254, 256, 258, 262, 264, 266,
288, 316, 330, 339, 344, 347, 349, 350, 360, 366, 368, 369, 370, 374, 386,
396, 398, 399, 401, 403, 423, 424, 425, 449, 451, 452, 486, 496, 519,
520, 525, 526, 527, 532, 533, 534, 535, 549, 550, 551
- 1.17A Ethylene - Propylene Copolymer
65, 191, 202, 203, 261, 522, 523

Code

- 1.18 Polyimide
54, 120, 122, 151, 177, 188, 213, 214, 216, 242, 243, 244, 292, 295, 296,
344, 345, 350, 356, 455, 459, 465, 517
- 1.19 Polypropylene
19, 20, 65, 66, 67, 68, 196, 204, 205, 206, 227, 233, 237, 238, 239, 247,
250, 253, 266, 347, 349, 360, 361, 363, 364, 365, 366, 367, 368, 398, 425,
452, 467, 496, 549
- 1.20 Polystyrene Group
8, 19, 26, 29, 35, 74, 78, 81, 111, 122, 158, 189, 191, 214, 227, 230,
236, 239, 245, 250, 252, 253, 266, 299, 300, 301, 302, 303, 304, 305,
306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 330, 331, 341, 347,
367, 376, 398, 400, 405, 418, 452, 496, 522, 523, 541, 543
- 1.21 Polysulfide
235, 289, 291, 344, 387, 405, 457, 472, 474, 477, 484
- 1.22 Polyurethane
55, 78, 79, 90, 179, 197, 216, 222, 224, 240, 282, 284, 288, 289, 294,
295, 338, 344, 350, 382, 383, 401, 403, 451, 455, 457, 458, 461, 465,
467, 472, 474, 477, 481, 482, 484, 502, 517, 539, 541, 543, 544, 546,
549
- 1.23 Semiorganic - Aluminum in backbone
(None)
- 1.24 Semiorganic - Arsenic in backbone
(None)
- 1.25 Semiorganic - Boron in backbone
455
- 1.26 Semiorganic - Chromium in backbone
(None)
- 1.27 Semiorganic - Nitrogen in backbone (Excluding polyamide and polyurethane)
224, 225, 241, 295, 455
- 1.28 Semiorganic - Phosphorus in backbone
455
- 1.29 Semiorganic - Sulphur in backbone
225, 241, 455
- 1.30 Semiorganic - Tin in backbone
(None)
- 1.31 Semiorganic - Titanium in backbone
(None)

Code

- 1.32 Semiorganic - Other elements in backbone
 455
- 1.33 Silicone (see 1.12 for Phenyl Silane)
 199, 215, 216, 285, 287, 291, 347, 348, 349, 389, 394, 396, 398, 401,
 405, 451, 455, 457, 463, 467, 468, 469, 470, 471, 472, 473, 475, 477,
 480, 482, 484, 498, 517, 537
- 1.34 Vinyls
 1, 2, 3, 4, 5, 14, 15, 16, 17, 18, 21, 22, 26, 35, 36, 46, 47, 48, 49,
 61, 81, 89, 122, 134, 193, 212, 214, 224, 233, 234, 236, 239, 248, 250,
 253, 255, 259, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 330,
 334, 347, 366, 367, 368, 374, 398, 401, 403, 404, 405, 451, 452, 462,
 465, 486, 496, 503, 506, 517, 530, 534, 548, 549, 552
- 1.35 Unidentified
 157, 162, 212

SECTION 6. COMPILED LISTS OF PAPERS HAVING SPECIFIC TYPE OF DATA

ON THE PROPERTIES OF PLASTICS

(By Reference Number)

NOTE: The papers listed here are limited to those containing data. If the paper discussed a property without inclusion of data, it would not be listed herein.

Code

- 2.1 Acoustics data
482, 514
- 2.2 Adhesive
6, 46, 71, 120, 211, 213, 315, 376, 382, 404, 455, 456, 457, 458, 459,
461, 462, 463, 464, 465, 466, 475, 477
- 2.3 Aging (Except 2.16, 2.23)
50, 53, 89, 146, 151, 154, 215, 240, 242, 243, 383, 389, 455, 458, 465,
475, 476
- 2.4 Effect of Chemicals (Except 2.5 - 2.12)
5, 49, 51, 67, 100, 215, 237, 241, 248, 299, 324, 325, 326, 367, 370,
398, 410
- 2.5 Compatibility
90, 99, 162, 202, 213, 244, 382
- 2.6 Effects of Water or Moisture
4, 33, 39, 41, 49, 147, 154, 159, 162, 170, 199, 215A, 220, 240, 241,
242, 244, 246, 248, 249, 322, 325, 370, 382, 383, 389, 398, 399, 401,
415, 452, 488, 498, 509, 512, 531
- 2.7 Molecular/polymer Structure
11, 39, 54, 60, 65, 68, 70, 73, 87, 94, 105, 123, 138, 147, 148, 149,
168, 214, 224, 225, 232, 233, 234, 241, 242, 243, 254, 365, 366, 388, 389,
394, 406, 407, 410, 412, 455, 467, 491
- 2.8 Permeability; Vapor Transmission
6, 40, 78, 84, 86, 90, 200, 204, 241, 397, 398, 473, 477, 526
- 2.10 Stress Cracking
75, 94, 202, 207, 247, 266, 301, 326, 370, 505
- 2.11 Toxicity
69

Code

- 2.12 Weight Loss
49, 51, 73, 89, 149, 161, 212, 235, 237, 242, 243, 244, 340, 367, 381,
382, 387, 388, 389, 456, 459, 464, 469, 492, 538
- 2.13 Electrical Properties (Excepting 2.14 - 2.16)
26, 39, 40, 49, 69, 70, 79, 97, 100, 107, 136, 145, 148, 149, 195, 202,
203, 204, 210, 212, 213, 214, 215, 215A, 220, 242, 243, 340, 371,
372, 373, 374, 375, 376, 378, 381, 382, 386, 389, 394, 411, 424, 425, 426,
427, 444, 445, 457, 459, 468, 482, 512, 531, 539
- 2.14 Arc, Corona, Tracking, Treeing
40, 107, 111, 244, 370, 376, 449
- 2.15 Electric Strength
49, 51, 69, 70, 100, 107, 116, 136, 154, 202, 204, 210, 212, 213, 214,
215A, 242, 243, 376, 394, 440, 441, 442, 443, 468
- 2.16 Thermal Aging of Electronic Components
70, 212, 373, 382
- 2.17 Environmental Effects on Properties (Except 2.6, 2.18 - 2.23)
(None)
- 2.18 Effects of Radiation
119, 214, 235, 241, 371, 387, 398, 424, 425, 451, 469, 509, 534, 539
- 2.19 Effects of Vacuum
469
- 2.20 Data at Below (-) 100⁰ F
125, 424, 455, 460, 461, 463, 465, 467, 481, 519, 530
- 2.21 Data at (-) 100⁰ F to 32⁰ F
424
- 2.21A Data at +150⁰ F to 500⁰ F
10, 51, 54, 74, 148, 237, 247, 300, 361, 367, 372, 388, 389, 399, 408,
413, 415, 418, 423, 425, 441, 455, 456, 457, 458, 459, 461, 462, 463,
464, 465, 475, 481, 489, 491a, 492, 502, 503, 512, 519, 530, 533, 552
- 2.22 Data at Over 500⁰ F
54, 151, 242, 243, 366, 381, 389, 391, 415, 455, 459, 463, 465, 469,
473, 476, 481, 483, 492, 502, 517
- 2.23 Data on Weathering
2, 3, 15, 18, 70, 81, 90, 158, 361, 389, 509
- 2.24 Mechanical Properties (Other than 2.25 - 2.36)
5, 10, 11, 14, 15, 16, 17, 24, 27, 28, 33, 36, 38, 39, 40, 41, 43, 49,
50, 51, 52, 54, 58, 61, 65, 67, 70, 79, 81, 87, 90, 92, 94, 97, 98, 99,
100, 102, 103, 105, 106, 107, 109, 110, 116, 117, 118, 122, 125, 135,
136, 137, 138, 145, 147, 148, 149, 150, 151, 153, 155, 160, 162, 167,

Code

- 2.24 Mechanical Properties (Other than 2.25 - 2.36), continued
174, 177, 178, 179, 187, 188, 189, 191, 197, 202, 204, 211, 212, 214, 215,

CODE SHEET

1. PLASTIC/POLYMERIC MATERIAL TYPES

(See "Breakdown..." adjacent)

- 1.1 Acetal
- 1.2 Acrylic group
- 1.3 Allylics
- 1.4 Amino
- 1.5 Butadiene-styrene
- 1.6 Cellulosics
- 1.7 Elastomer (other than listed herein)
- 1.8 Epoxy
- 1.9 Fluorocarbon
- 1.10 Inorganic (no carbon in polymer backbone; see 1.33 for silicone)
- 1.10A Ionomer
- 1.11 Phenolic
- 1.12 Phenyl-silane
- 1.12A Phenyl oxide, Phenylene oxide
- 1.13 Poly(amide)
- 1.14 Poly(carbonate)
- 1.15 Poly(ester); alkyd
- 1.16 Poly(ether)
- 1.17 Poly(ethylene)
- 1.17A Ethylene-copolymers
- 1.18 Poly(imide)
- 1.19 Poly(propylene)
- 1.20 Poly(styrene) group
- 1.21 Poly(sulfide)
- 1.22 Poly(urethane)
- 1.23-1.32 Semiorganic polymers (Carbon + element listed below in backbone)
- 1.23 Aluminum in backbone
- 1.24 Arsenic in backbone
- 1.25 Boron in backbone
- 1.26 Chromium in backbone
- 1.27 Nitrogen in backbone (excluding polyamide and polyurethane)
- 1.28 Phosphorus in backbone
- 1.29 Sulphur in backbone
- 1.30 Tin in backbone
- 1.31 Titanium in backbone
- 1.32 Other element in backbone
- 1.33 Silicone (see 1.12 for phenyl silane)
- 1.34 Vinyls
- 1.35 Unidentified

2. TABULATED OR GRAPHICAL DATA ON THESE PROPERTIES AND/OR UNDER THE ENVIRONMENT LISTED HEREIN

- 2.1 Acoustic
- 2.2 Adhesive
- 2.3 Aging (except 2.16, 2.23)
- 2.4 Effect of chemicals (except 2.5-2.12)
- 2.5 Compatibility
- 2.6 Effects of water or moisture
- 2.7 Molecular/polymer structure
- 2.8 Permeability, vapor transmission
- 2.10 Stress cracking, crazing
- 2.11 Toxicity
- 2.12 Weight loss
- 2.13-2.16 Electrical properties
- 2.13 Excepting 2.14 -2.16
- 2.14 Arc, corona, tracking, treeing
- 2.15 Electric strength
- 2.16 Thermal aging of elec comp
- 2.17-2.23 Properties under these environments
- 2.17 Environments except 2.18-2.23
- 2.18 Irradiation
- 2.19 Vacuum
- 2.20-2.23 Properties at these conditions
- 2.20 Prop. at temp below -100°F
- 2.21 Prop. at temp (-100°F to +32°F)
- 2.21A Prop. at temp (+150°F to 500°F)
- 2.22 Prop. at temp over 500°F
- 2.23 Weathering
- 2.24-2.36 Mechanical properties
- 2.24 Other than 2.25-2.36
- 2.25 Bearing
- 2.26 Cushioning; damping
- 2.27 Creep
- 2.28 Compression
- 2.29 Dynamic loading
- 2.30 Fatigue
- 2.31 At high load rate
- 2.32 Hoop tension; burst; buckling
- 2.33 Modulus; compliance
- 2.34 Shear
- 2.35 Stress relaxation
- 2.36 Stress-strain curve
- 2.37 Optical incl infra red spectra
- 2.38 Rheological
- 2.39 Surface
- 2.40-2.42 Thermal
- 2.41 Thermal other than 2.41-2.42
- 2.41 Ablation
- 2.42 Flammability
- 2.43 Thermodynamic

Breakdown of Plastic Material Sub-groups in Code Sheet

Some materials listed under 1 in code sheet cover several groups - i. e. 1.11 Phenolic - covers Phenol-formaldehyde and Phenol-furfural. Following are the material subgroups used in this report.

1.2	Acrylic Polymethyl methacrylate Methyl methacrylate-styrene copolymer	1.23-1.32	Semiorganic polymer If a polymer containing two or more such elements is listed - i. e., polybenzborimidazolines, then it is listed in each group, i. e., 1.25, 1.27.
1.3	Allylic Diallyl phthalate Other diallyl materials	1.25	Boron in polymer backbone Polybenzborimidazolines Polyborophane
1.4	Amino Urea formaldehyde Melamine formaldehyde	1.27	Nitrogen in polymer backbone (Aliphatic polyamide, i. e. nylon and the urethanes are not listed in this group.) Polybenzimidazole Polybenzborimidazolines Polyoxadiazole Polyhydrazide Polyphenylene triazole Polythiazole
1.6	Cellulosic Ethyl cellulose Cellulose acetate Cellulose propionate Cellulose acetate butyrate Cellulose nitrate		
1.8	Epoxy Epoxy casting and molding materials Epoxy novolac Epoxy polyolefin Epoxidized polybutadiene Phenoxy	1.28 1.29	Phosphorus in polymer backbone Polyborophane Sulphur in polymer backbone (excluding polysulfides) Polythiazole Polyphenylene sulfide Polytriazinylene sulfide
1.9	Fluorocarbon Polytetrafluoroethylene Fluorinated ethylene propylene polymers Polychlorotrifluoroethylene Polyvinylidene fluoride	1.34	Vinyls, vinyl chloride Vinyl acetate Vinyl alcohol Vinyl butyral Vinyl chloride Vinyl chloride-acetate Vinylidene chloride Vinyl formal Polyvinylidene dichloride
1.11	Phenolic Phenol-formaldehyde Phenol-furfural		
1.20	Polystyrene Group (see also 1.5) Polystyrene Styrene-acrylonitrile copolymer Acrylonitrile-butadiene-styrene terpolymers and blends		

Both the main group - i. e., Phenolic- and subgroup - i. e., Phenolformaldehyde and Phenol-furfural - are listed by their chemical nomenclature. In order to determine the chemical group of a particular commercial plastic material - i. e., Teflon, or the trade name of particular materials, it is suggested that the reader refer to the published lists of plastic material trade names. One source is the Modern Plastics Encyclopedia.*

* Modern Plastics Encyclopedia, published yearly.

SECTION 9. BIBLIOGRAPHY

In this bibliography, the items are listed under the particular conference at which they were presented. When the conference was programmed as to specific interests, such sub-divisions have been retained and identified.

The reference numbers are of within-report interest only. These were assigned, progressively, across all conferences reported.

THE REPORTS CITED IN THIS BIBLIOGRAPHY ARE NOT AVAILABLE FROM PLASTEC

Twenty-First Annual Technical Conference
March 1-4, 1965, Boston
Society of Plastics Engineers, Inc.

Proceedings available from Society of
Plastics Engineers, Inc., 65 Prospect
Street, Stamford, Connecticut; Volume X1, \$10.00

VINYL PLASTICS - 1

- 1
- 1 Thermal Processing Stability of Vinyl Chloride Plastics, by J. B. DeCoste (Bell Telephone Labs., Inc., sec 1-1, 11p. (1.34, 2.38, 2.40)
- 2 Photodegradation of Rigid Poly (Vinyl Chloride).
 - I. Statistical Correlation of Outdoor Weathering With Indoor Artificial Source Photodegradation Phenomena, by L. B. Weisfeld, G.A. Thacker, L.I. Nass (Carlisle Chemical Works, Inc.) sec 1-2, 6p. (1.34, 2.23)
- 3 Photodegradation of Rigid Poly (Vinyl Chloride),
 - II. Outdoor Weathering Studies, by G.A. Thacker, L.I. Nass, L.B. Weisfeld (Carlisle Chemical Works, Inc.) sec 1-3, 8p. (1.34, 2.23)
- 4 The Effects of Stabilizer Composition and Other Factors on the Properties of Vinyl Asbestos Floor Tiles, by J.P. Scullin, A.F. Fletcher (Heyden Newport Chemical Corp.), sec 1-4, 12p. (1.34, 2.6)
- 5 A New Technique for Producing Stain Resistance PVC Floor Tile, by P. T. Von Bramer, M.R. Whitley (Eastman Chemical Products, Inc.) sec 1-5, 4p. (1.34, 2.4, 2.24)

EXTRUSION - I

- 6 Nylon Extrusion Coating, by J. C. Werner, G.D. Murphy (Spencer Chemical Div, Gulf Oil Corp), sec 2-1, 4p. (1.13, 2.2, 2.8)
- 7 Pre-Centered Pressure Coating Die, by N.C. Wyeth (E.I. du Pont de Nemours & Co. Inc.), sec 2-2, 2p.
- 8 The Prediction of ABS Extruded Sheet Surface Quality by Rheometer Behavior, by E. Paul Weaver (U.S. Rubber Co.) sec 2-3, 4p. (1.20, 2.38, 2.39)

Ref No.

EXTRUSION-I (CONT)

- 9 Description and Analysis of Tracerlab's Single Gauge and Dual Gauge Cross Axis Systems, by Endre S. Maroti (Tracerlab Div, Laboratory for Electronics, Inc.), sec 2-4, 2p.

MOLD DESIGN AND THERMOSETTING MOLDING

- 10 Heat Resistance, Heat Deflection and Dimensional Stability Values of Phenolic Compounds, by R.W. Bainbridge (Hooker Chemical Corp.), sec 4-1, 3p. (1.11, 2.21A, 2.24, 2.27, 2.28, 2.33)
- 11 Part Design and Mold Design as a Function of Considerations Based Upon Polymer Chemistry and Polymer Physics, by Howard Robb (Spencer Chemical Co.), sec 4-2, 6p. (2.7, 2.24)
- 12 Mold Design for Automatic Runnerless Molding, by M.I. Ross (The Milton Ross Co.), sec 4-3, 5p.
- 13 Pre-Pre Molds, by W.C. Martin, Jr. (Carrier Research & Development Co.), sec 4-4, 5p.

VINYL PLASTICS - II (RIGID VINYLs)

- 14 The Impact Behavior of Rigid PVC Compounds, by John R. Hyndman (The Goodyear Tire and Rubber Co.), sec 5-1, 3p. (1.14, 1.34, 2.24)
- 15 Development of an Impact Test for Evaluation of Weatherability of Rigid Plastics, by R.C. Neuman (B.F. Goodrich Chemical Co.), sec 5-2, 3p. (1.34, 2.23, 2.24, 2.29)
- 16 In Line Annealing - A New Approach to the Extrusion of High Quality Rigid Vinyl Products, by R.P. Socha (B.F. Goodrich Chemical Co.), sec 5-3, 7p. (1.34, 2.24)
- 17 Formulation and Processing Factors Affecting the Impact Strength of Rigid PVC Compositions, by Ray Phillips, D.S. Dixler, C.A. Heiberger (Air Reduction Co., Inc.), sec 5-4, 3p. (1.34, 2.24)
- 18 Stabilization of Rigid Polyvinyl Chloride Against Ultraviolet Radiation, by W.W. Tobin (Geigy Chemical Corp.), sec 5-5, 6p. (1.34, 2.23, 2.37)

EXTRUSION - II

- 19 Phenomenon of Draw Resonance in Polymeric Melts, by A. Bergonzoni, A.J. DiCresce (Enjay Laboratories, Esso Research and Engineering Co.), sec 6-1, 6p. (1.17, 1.19, 1.20, 2.38)
- 20 Draw Resonance: Its Correlation to Molecular Parameters, by A. Bergonzoni, A.J. DiCresce (Enjay Laboratories, Esso Research and Engineering Co.), sec 6-2, 10p. (1.17, 1.19, 2.34, 2.38)
- 21 Metering Screw Performance with Temperature Gradients -
I. Experiments, by D.I. Marshall, I. Klein, R.H. Uhl (Western Electric Co., Inc.), sec 6-3, 9p. (1.17, 1.34, 2.38)
- 22 Metering Screw Performance with Temperature Gradients -
II. Comparison of Calculated and Measured Performance, by D.I. Marshall, I. Klein, R.H. Uhl (Western Electric Co., Inc.), sec 6-4, 5p. (1.17, 1.34, 2.34, 2.38, 2.40)

Ref. No.

EXTRUSION - II (CONT)

- 23 Metering Screw Performance with Temperature Gradients -
III. Conclusions from Computer Simulation, by D.I. Marshall, I. Klein
(Western Electric Co., Inc.), sec 6-5, 8p.

REINFORCED PLASTICS - I

- 24 Effect of Rate and Temperature on the Tensile Properties of 181 Glass Cloth
Reinforced Polyester, by E. McAbee, M. Chmura (Picatinny Arsenal, U.S.
Army Munitions Command), sec 7-1, 4p. (1.15, 2.24, 2.31)
- 25 Physical Properties of High Temperature Allylic Prepregs, by Harry Raech,
J.M. Kreinik (FMC Corp.), sec 7-2, 3p. (1.3, 1.8, 1.11, 2.28, 2.33, 2.40)
- 26 The Effect of Silane Coupling Agents in Improving the Properties of Filled or
Reinforced Thermoplastics by S. Sterman, J.G. Marsden (Union Carbide
Corp.), sec 7-3, 18p. (1.2, 1.13, 1.14, 1.17, 1.20, 1.34, 2.13, 2.24,
2.33)
- 27 The Influence of Roving Storage Environment on Selected Properties of Plastics
Composite Materials, by M.A. Kinna (U.S. Naval Ordnance Lab.), sec 7-4,
4p. (1.8, 2.24, 2.34)
- 28 Carbon Fiber Reinforcement of Epoxy Resins, by A.A. Pallozzi (Union Carbide
Corp.), sec 7-5, 3p. (1.8, 2.24, 2.28, 2.34)

INJECTION MOLDING - I

- 29 Moldability Characterization of High Impact Plastics, by C.W. Deeley, J.F.
Terenzi (American Cyanamid Co.), sec 8-1, 4p. (1.2, 1.6, 1.20, 2.34,
2.38)
- 30 Application of Value Engineering Principles to the Design of Small Thermo-
plastic Components, by J.J. McDermott (Gries Reproducer Corp.), sec 8-2,
5p.
- 31 Rubber Molding with the Reciprocating Screw, by H.H. Frimberger, W.B.
Evans (New Britain Machine Co.), sec 8-3, 5p.
- 32 Optimizing an Equipment Replacement Policy Via Dynamic Programming, by
S. Weissman (W.R. Grace & Co.), sec 8-4, 7p.
- 33 The Dimensional Behavior of Acetal Copolymer Moldings, by A.G. Serle
(Celanese Polymer Co.), sec 8-5, 5p. (1.1, 2.6, 2.24, 2.38, 2.40)

COLORING OF PLASTICS AND VINYL PLASTICS - III

- 34 Colors for Food Packaging and FDA Regulations, by M.J. Dunn (H.
Kohnstamm & Co., Inc.), sec 9-1, 2p.
- 35 Colorants for Rigid Thermoplastics, by F.J. Nadolski (American Cyanamid
Co.), sec 9-2, 2p. (1.2, 1.6, 1.14, 1.20, 1.34)
- 36 Pigment Dispersion in Plastisol and Calendered Vinyls, by T.B. Reeve, R.H.
Zabel (E.I. du Pont de Nemours & Co.), sec 9-3, 7p. (1.34, 2.24)
- 37 Evaluation and Description of Metallic Colors, by H.C. Felsher, W.J. Hanau
(Claremont Polychemical Corp.), sec 9-4, 7p. (2.37)

Ref. No.

NEW MATERIALS

- 38 Engineering Properties of Halon G-80, A New Polytetrafluoroethylene Resin, by G.P. Koo, E.D. Jones, M.N. Ridell, J.L. O'Toole (Allied Chemical Corp.), sec 10-2, 6p. (1.9, 2.24, 2.27, 2.28, 2.30, 2.36, 2.40)
- 39 Q2: A New Polycyclamide Engineering Plastic, by M.T. Watson, G.M. Armstrong (Tennessee Eastman Kodak Co.), sec 10-3, 5p. (1.13, 2.6, 2.7, 2.13, 2.24, 2.33, 2.38)
- 40 "Surlyn" A, A New Ionomer Resin, by C.E. Hoberg, R.W. Rees, (E.I. du Pont de Nemours & Co.), sec 10-4, 5p. (2.8, 2.13, 2.14, 2.24, 2.36)
- 41 Engineering Plastics Updated: Greater Functional Design with Filled Thermoplastics, by J.Y. Lomax, J.T. O'Rourke (Liquid Nitrogen Processing Corp.), sec 10-5, 9p. (1.1, 1.13, 1.14, 2.6, 2.24, 2.27, 2.30, 2.33, 2.40)

REINFORCED PLASTICS - II (FILAMENT WINDING)

- 42 The Compressive Strength of Filament Wound Plastic Materials, by N. Fried, M. Silvergleit (U.S. Applied Science Lab.), sec 11-1, 5p. (1.8, 2.28)
- 43 Design and Stress Analysis on Road and Rail Transport Tanks, by M.E. Kenney (East Lancashire Plastics), sec 11-2, 11p. (2.24, 2.29, 2.33, 2.34)
- 44 Continuous Bias Tape Wrapping of Re-Entry Nose Cones, by S.G. Salzinger (Haveg Reinhold Inc.), sec 11-3, 3p. (1.11)
- 45 Application of Reinforced Plastics for Deep Submersible Structures, by Byron C. Anderson (Whittaker Co.), sec 11-4, 4p. (1.8, 2.28, 2.33)

VINYL PLASTICS - IV

- 46 Rheological Requirements of Vinyl Dispersion Compounds for Fabric Coating, by A.C. Werner (Marvinol Development Chemical Div., U.S. Rubber Co.), sec 13-1, 4p. (1.34, 2.2, 2.38)
- 47 Correlation of Some Processing Characteristics of Commercial Polyvinyl Chloride Polymers, with Composition Variables, The Glass Transition Temperature and Solution Viscosity, by P.V. McKinney (Armstrong Cork Co.), sec 13-2, 12p. (1.34, 2.38)
- 48 Versatile New Liquid Organic Chemical Blowing Agents for Cellular Vinyls, by C.S. Sheppard, N.H. Schack, O.L. Magoli (Wallace & Tiernan, Inc.), sec 13-3, 14p. (1.34, 2.38)
- 49 Chlorinated Polyethylene as a Modifier for Plasticized PVC Compounds, by R.R. Merkel, A.H. Searl (Allied Chemical Corp.), sec 13-4, 9p. (1.17, 1.34, 2.4, 2.6, 2.12, 2.13, 2.15, 2.24, 2.33, 2.36, 2.38)
- 50 The Effect of Diluents Upon Stir-In Organosol Compound Rheological and Fusing Characteristics, by J.M. Ogorzalek (Firestone Plastics Co.), sec 13-5, 11p. (2.3, 2.24, 2.33, 2.38)

REINFORCED PLASTICS - III

- 51 An Epoxy - Acrylic Polymer - A New Thermosetting Resin, by C.A. May, R.E. Burge, S.H. Christie (Shell Chemical Co.), sec 15-1, 4p. (1.2, 1.8, 2.4, 2.12, 2.15, 2.21A, 2.24, 2.34)
- 52 Effect of Thickness on the Tensile Properties of Vacuum Bagged Phenolic-Fiberglass Laminates, by Julius Hertz (General Dynamics/Astronautics), sec 15-2, 11p. (1.11, 2.24, 2.29)

Ref. No.

REINFORCED PLASTICS - III (CONT)

- 53 An Infrared Test for Determination of Phenolic Resin Cure Advancement, by C. E. Reed (The Marquardt Corp.), sec 15-3, 19p. (1.11, 2.3, 2.37)
- 54 An Investigation of Some New High Temperature Resin Systems, by D. W. Marshall (Avco Corp.), sec 15-4, 8p. (1.8, 1.11, 1.18, 2.7, 2.21A, 2.22, 2.24, 2.40)
- 55 Development of a Railroad Refrigerator Wagon for the Transport of Deep-Freeze Goods with a Complete Integral Superstructure of Reinforced Polyester with a K-Value Less than $0.20 \text{ kcal/m}^2/\text{h}/^\circ\text{C}$ ($0.04 \text{ BTU/sq ft/h}/^\circ\text{F}$), by Ir. A. Wethmar (Development Center, Werkspoor N.V. Utrecht, Holland), sec 15-5, 8p. (1.15, 1.22, 2.27, 2.29, 2.30, 2.32, 2.40)

POLYOLEFINS - I

- 56 Microfine Polyolefin Powders, by S. G. Howell, D. M. Akers (U.S. Industrial Chemicals Co.), sec 16-1, 4p. (1.17)
- 57 Extrusion of Peroxide-Containing Polyethylene, by C. J. Benning (W. R. Grace & Co.), sec 16-2, 6p. (1.17)
- 58 Mechanical Properties of Cross-Linked Linear Polyethylene, by G. E. Fulmer, C. J. Benning (W. R. Grace & Co.), sec 16-3, 6p. (1.17, 2.24, 2.36)
- 59 Mechanical Properties of Cross-Linked Ethyl Acrylate Copolymers, by S. Bonotto (Union Carbide Corp.), sec 16-4, 9p. (1.2, 1.17, 2.33, 2.36)
- 60 Thermal and Oxidative Effects in Polyethylene Above 200°C , by H. M. Quackenbos (Union Carbide Corp.), sec 16-5, 6p. (1.17, 2.7, 2.38, 2.40)

PLASTICS IN BUILDINGS - I

- 61 The External Covering of Buildings with High-Impact PVC, by K. Fischer (Farbwerke Hoechst), sec 19-1, 10p. (1.34, 2.24, 2.33, 2.40)
- 62 Plastics in Building - An Answer to Institutional Building and Housing in Developing Countries, by J. S. Stahl (Stahl Industries, Inc.), sec 19-2, 6p.
- 63 Four Unique Plastics Projects at the New York World's Fair, by Armand G. Winfield (Consultant), sec 19-3, 12p.
- 64 Plastics in Building ... "A Blue Sky" Excursion into the Near Future, by Armand G. Winfield (Consultant), sec 19-4, 7p.

POLYOLEFINS - II

- 65 Properties of a Propylene-Ethylene Block Copolymer, by R. L. Tusch (Enjay Laboratories), sec 20-1, 7p. (1.17A, 1.19, 2.7, 2.24, 2.33, 2.38)
- 66 Stress Rupture of Polypropylene, by J. P. Forsman, H. C. North, T. H. Hakala (Enjay Laboratories), sec 20-2, 9p. (1.19, 2.32)
- 67 Influence of Annealing on the Density and Tensile Properties of Polypropylene, by R. S. Schotland (Mobil Chemical Co.), sec 20-3, 4p. (1.19, 2.4, 2.24, 2.33)
- 68 Fractional Crystallization of Polypropylene, by P. M. Kamath, L. Wild (U.S. Industrial Chemicals Co.), sec 20-4, 4p. (1.19, 2.7)

Ref. No.

PLASTICS IN ELECTRICAL INSULATION - I

- 69 Epoxy Potting Compounds and Protective Coatings for Welded Modulus, by W. Kartman, F. Watson (The Epoxylite Corp.), sec 21-1, 4p. (1.8, 2.11, 2.13, 2.15, 2.40)
- 70 Cycloaliphatic Epoxy Resins: Premium Properties for Electrical Insulation, by E.N. Dorman (Ciba Products Co.), sec 21-2 6p. (1.8, 2.7, 2.13, 2.15, 2.16, 2.23, 2.24, 2.33, 2.40)
- 71 Adhesion of Epoxy Molding Compounds to Tinne Copper Lead Wires, by W.I. Childs (Hysol Corp.), sec 21-3, 4p. (1.8, 2.2)
- 72 Variables Contributing to Corona and Premature Dielectrical Insulation, by L. Balk (The Sterling Varnish Co.), sec 21-4, 2p. (1.8)

PLASTICS PROPERTIES - I

- 73 Effects of Moisture on Glycidyl Reactions with Carboxylic Acid Anhydrides, by S.L. Kaplan, L.E. McAllister, A.T. Stewart (Avco Corp.), sec 22-1, 5p. (1.8, 2.7, 2.12, 2.37)
- 74 A Method for Rapid Determination of Thermal Expansion and Apparent Second-Order, Transition Temperature of Polymer Films, by E.C. Rothstein, D. S. Spechler (Keuffel & Esser Co.), sec 22-2, 5p. (1.6, 1.14, 1.17, 1.20, 2.21A, 2.40)
- 75 Dead-Load Creep Rupture of Poly (Methyl Methacrylate), by R.J. Curran, R.D. Andrews (Massachusetts Institute of Technology), sec 22-3, 18p. (1.2, 1.17, 2.10, 2.27)
- 76 Determination of Stresses in Formed Plastics Parts, by R.R. Dixon (Westinghouse Electric Corp.), sec 22-4, 2p. (2.33)
- 77 Photometric Method for Measuring Crazing in Transparent Plastics Materials, by S. Leghissa, O. Salvatore (Montecatini), sec 22-4, 4p. (1.2, 2.37)

PLASTICS IN BUILDINGS - II AND PLASTICS FOAMS - I

- 78 Moisture Vapor Transmission and its Effect on Thermal Efficiency of Foam Plastics, by M.M. Levy (Pittsburgh Corning Corp.), sec 23-1, 11p. (1.20, 1.22, 2.8, 2.40)
- 79 High Density Polyurethane Foam Prepared by the One-Shot Technique, by F. M. Kujawa (Hooker Chemical Corp.), sec 23-2, 11p. (1.22, 2.13, 2.24, 2.28, 2.33, 2.34)
- 80 Polymethylmethacrylate Extruded Sheets, by I. Ronzoni, U. Monaco (Montecatini), sec 23-3, 6p.
- 81 Laminated Plastics, Their Applications and Technology, by V.L. Gliniecki (The Dow Chemical Co.), sec 23-4, 8p.

BLOW MOLDING - I

- 82 Market Development of a Blow Molded Milk Container, by F.A. Weber (Shell Chemical Co.), sec 24-1, 2p.
- 83 Reinforced Plastic Moulds for Large Blow Moulding Structures, by M.E. Kenney (East Lancashire Plastics), sec 24-2, 4p.
- 84 Test Procedures for Large, Molded Thermoplastics Liquid Shipping Containers, by C.A. Speas (Hedwin Corp.), sec 24-3, 5p.

Ref. No.

BLOW MOLDING - I (CONT)

- 85 Testing Polyethylene for Use in Blow Molded Containers, by N.M. Burns
 (Union Carbide Corp.), sec 24-4, 6p.
- 86 Phenoxy A Blow Molded Bottles, by J.A. Elder, Jr. (Union Carbide Corp.),
 sec 24-5, 3p.

PLASTICS PROPERTIES - II

- 87 Designing Epoxy Resins with Improved Toughness, by A.S. Burhans, J.J.
 Madden, W.P. Mulvaney, R.F. Sellers, S.G. Smith (Union Carbide Corp.),
 sec 26-1, 6p.
- 88 An On-Stream Melt Viscosity Analyzer, by R.O. Welty (Phillips Petroleum
 Co.), sec 26-2, 3p.
- 89 Oven Aging of PVC Wire Insulation, by C.P. Maffia, D.W. Wright, S.J.
 Fusco, E.J. Wickson (Enjay Laboratories), sec 26-3, 3p.
- 90 Performance and Design Characteristics of Thermoplastic Polyurethane Sheet
 and Film, by D. Esarove (B.F. Goodrich Chemical Co.), sec 26-4, 10p.

Twentieth Anniversary Technical Conference, Reinforced Plastics
Division, Society of the Plastics Industry, Inc.
February 2-4, 1965, Chicago

Proceedings available from the Society of the Plastics Industry, Inc.
250 Park Avenue, New York, New York

Ref. No.

- 91 Development of Reinforced Plastic Hull Structures for Deep-Diving Submersible Vehicles, by Bernard Fink (H.I. Thompson Fiber Glass Co.), sec 1-A, 13p. (1.8, 2.30, 2.32)
- 92 Interlaminar Shear of Filament-Wound Reinforced Plastics, by Robert A. Elkin (Whittaker Corp.), sec 1-B, 12p. (1.4, 1.8, 1.11, 1.15, 2.24, 2.28, 2.30, 2.33, 2.34)
- 93 The Response of Orthogonal Filament-Wound Materials to Compressive Stress, by N. Fried (U.S. Naval Applied Science Laboratory), sec 1-C, 8p. (2.28, 2.34)
- 94 Designing Epoxy Resins Specifically for Filament-Wound Deep Submergence Applications, by A.S. Burhans, J.R. Harvey, W.P. Mulvaney, R.F. Sellers and S.G. Smith, Jr. (Union Carbide Corp.), sec 1-D, 12p. (1.8, 2.7, 2.10, 2.24, 2.28, 2.33, 2.34)
- 95 Quality Control of Filament-Wound Materials for Deep Submergence Vessels, by Walter Hand (Brooklyn Naval Base), sec 1-E, 6p. (1.8, 2.28, 2.33, 2.34)
- 96 A New Highly Active, Ketone Peroxide Formulation for Rapid, Room Temperature Cures of Unsaturated Polyester Resins, by James R. Kolczynski, Donald M. Kressin, Solomon C. Westbrook, Jr. and Orville L. Mageli (Wallace & Tiernan Inc.), sec 2-A, 6p. (1.15)
- 97 A New Approach to Heat Resistant Polyester Resins, by K.W. Raymond (California Chemical Co.), sec 2-B, 4p. (1.15, 2.13, 2.24)
- 98 The Advantages of Chlorostyrene Diluted Polyesters in Production of Reinforced Plastics, by L.C. Rubens, C.F. Thompson and R.M. Nowak (Dow Chemical Co.), sec 2-C, 8p. (1.15, 2.24, 2.33, 2.36A, 2.42)
- 99 Epoxy-Acrylic Resins for FRP Structures, by C.A. May and H.A. Newey (Shell Development Co.), sec 2-D, 8p. (1.2, 1.8, 1.15, 2.5, 2.24, 2.33, 2.37, 2.38)
- 100 Vazo (2,2'-Azobisisobutyronitrile) As a Curing Agent for Unsaturated Polyesters, by Samuel V. Abramo (E.I. DuPont de Nemours Co.), sec 2-E, 6p. (1.15, 2.4, 2.13, 2.15, 2.24, 2.28)
- 101 Catalysis and Inhibition of Diallyl Phthalate Polyesters, by J. Litwin and H.H. Beacham (FMC Corp.), sec 2-F, 8p. (1.15)
- 102 Peroxide Diluents and Their Effects on Polyester Cure, by Neil Estrada and J.D. Malkemus (Reichhold Chemicals, Inc.), sec 2-G, 6p. (1.15, 2.24, 2.33, 2.39)
- 103 Characteristics of Flaws on Glass Fibers, by Gunther K. Schmitz and A.G. Metcalfe (International Harvester), sec 3-A, 14p. (2.24, 2.29, 2.30, 2.36)
- 104 A Study of the Reactions of Surface Hydroxyl Groups of Silica by Means of Infrared Spectroscopy, by Thomas E. White (Pilkington Brothers, Ltd.), sec 3-B, 15p. (2.37)
- 105 Fundamental Aspects of the Action of Organophosphorus Compounds as Glass Finishes, by Malcolm E. Schrader and Irving Lerner (Brooklyn Naval Base), sec 3-C, 5p. (1.8, 2.7, 2.24)

Ref. No.

- 106 Surface Activity of A-Glass Fibers, by Hans Weisbart (Glaswerk, Schuller GMBH), sec 3-D, 6p. (1.15, 2.24, 2.28)
- 107 Fibrous Glass Mat for High Pressure Laminating, by Neil A. Carter (Owens-Corning Fiberglas Corp.), sec 4-A, 6p. (1.11, 2.13, 2.14, 2.15, 2.24, 2.28)
- 108 Convolutely Wound Tubular Shapes, by W.J. King (Canadian General Electric Co.), sec 4-B, 6p. (1.2, 1.8, 1.15)
- 109 Reinforced Molding Compounds for Portable Electrical Tool Housing Applications, by L.P. Hoover and H.D. DeHaan (Allied Chemical Corp.), sec 4-C, 6p. (1.3, 1.11, 2.24)
- 110 A One-Step Fabrication of Honeycomb Sandwich Radomes, by Duane C. Shearer (Goodyear Aerospace Co.), sec 4-D, 4p. (1.2, 1.15, 1.20, 2.14)
- 111 Factors Effecting the Arc Resistance of Premix, by B.D. Pratt (Westinghouse Electric Corp.), sec 4-E, 4p. (1.2, 1.15, 1.20, 2.14)
- 112 Advanced Design Concepts for Deep-Diving Submersible Hulls, by Jay Daines and Dale Abildskov (H.I. Thompson Fiber Glass Co.), sec 5-A, 14p. (2.32, 2.36)
- 113 Axisymmetric Bending of Isotensoid Dome Shapes, by Longin B. Greszczuk (Douglas Aircraft Co., Inc.), sec 5-B, 10p. (2.33)
- 114 Thermoelastic Considerations for Filamentary Structures, by Longin B. Greszczuk (Douglas Aircraft Co., Inc.), sec 5-C, 10p. (2.40)
- 115 Residual Stresses in Filament-Wound Laminates and Optimum Programmed Winding Tension, by C.Y. Liu and C.C. Chamis (B.F. Goodrich Co.), sec 5-D, 10p. (2.36)
- 116 Plomat Preimpregnated Chopped Strand Mat, by N. Eastwood (Fothergill & Harvey, Ltd), sec 6-A, 6p. (1.15, 2.15, 2.24, 2.28, 2.33, 2.34)
- 117 Hollow Glass Fibers, by Jerome A. Burgman (Pittsburgh Plate Glass Co.), sec 6-B, 8p. (2.24, 2.28, 2.33, 2.34)
- 118 Whiskers Make Reinforced Plastics Better Than Metals, by John V. Milewski and James J. Shyne (Thermokinetic Fibers, Inc.), sec 6-C, 10p. (1.8, 1.11, 2.24, 2.36)
- 119 Radiation Resistant Plastics, by John Delmonte (Furane Plastics, Inc.), sec 6-D, 4p. (1.8, 2.18)
- 120 The Nature and Application of Hetrocyclic Polyaromatic Linear Polymers, by R. Poet (Whittaker Corp.), sec 6-E, 8p. (1.18, 2.2)
- 121 Color and Appearance, by Ruth M. Johnson and Robert E. Park (Pittsburgh Plate Glass Co.), sec 6-F, 5p.
- 122 A New Concept in Reinforced Plastics-Reinforced Thermoplastics Sheet, by G.L. Wicker (Turner Brothers Asbestos Co. Ltd.), sec 6-G, 8p. (1.1, 1.2, 1.8, 1.14, 1.18, 1.20, 1.34, 2.24, 2.33)
- 123 Applications of Thin-Layer and Gel Permeation Chromatography to the Characterization of Epoxy Resins, by H.L. Spell and Brad H. Miles (The Dow Chemical Co.), sec 7-A, 10p. (1.8, 2.7, 2.37)
- 124 A New Infrared Technique for Measurement of Polymerization in Phenolic Resins, by James B. Rock and H. Joseph Hernandez (U.S. Polymeric Chemicals, Inc.), sec 7-B, 4p. (1.11, 2.37)
- 125 Properties Testing of Reinforced Plastic Laminates Through the 20°K Range, by Louis W. Toth (Goodyear Aerospace Corp.), sec 7-C, 10p. (2.20, 2.24, 2.26, 2.28, 2.33, 2.34, 2.40)
- 126 The Application of Research as the Basis for a Quality and System Control at the Production Level, by Dorothy Goehring (MFG Boat Co.), sec 7-D, 6p.

Ref. No.

- 127 A Relative Hazard Classification of Commercial Organic Peroxides, by David C. Noller, Stanley J. Mazurowski, Gilbert F. Linden, Frederik J.G. deLeeuw and Orville L. Mageli (Wallace & Tiernan Inc.), sec 7-E, 14p. (2.42)
- 128 The Need for Standardization of Test Methods and Sampling Plans in the Prepreg Industry, by H.M. Toellner (U.S. Polymeric Chemicals, Inc.), sec 7-F, 12p.
- 129 Planning for the Total Marketing Concept, by Richard C. Christian (Marsteller, Inc.), sec 8-A, 6p.
- 130 An Investor Looks at the Plastics Industry, by Waid R. Vanderpoel (The First National Bank of Chicago), sec 8-B, 6p.
- 131 Corporate Acquisitions - A Means of Diversification, by George D. McCarthy (Price Waterhouse & Co.), sec 8-C, 2p.
- 132 Measuring Advertising Effectiveness, by Sydney R. Shell (Fred Wittner Co., Inc.), sec 8-D, 4p.
- 133 New Product Development in the FRP Industry, by Robert S. Morrison (Molded Fiber Glass Body), sec 8-E, Abstract Only.*
- 134 The Use of a Statistically Designed Experiment for Studying Resin Parameters, by Joseph Levitan (Shell Chemical Co.), sec 9-A, 4p. (1.8)
- 135 The Effects of Resin Parameters on the Properties of Cured Epoxy Resins, by S.H. Christie, III (Shell Chemical Co.), sec 9-B, 8p. (1.8, 2.24)
- 136 Improved General Purpose Filament Winding System, by James R. Harvey and C.F. Pitt (Union Carbide Corp.), sec 9-C, 8p. (1.8, 2.13, 2.15, 2.24, 2.33, 2.34, 2.36A, 2.38)
- 137 Glass Reinforcements for Filament Wound Composites, by Lt. A.J. Patrick, Jr. (Wright-Patterson AFB) and James C. Hood (Owens-Corning Fiberglas Co.), sec 9-D, 8p. (2.24)
- 138 New Prepreg Epoxy Resin Systems for Filament Winding, by H.L. Jones, Jr., A.N. Cianciarulo and R.L. Webb (CIBA Products Co.), sec 9-E, 8p. (1.8, 2.7, 2.24, 2.33, 2.34)
- 139 Large Diameter Fiber Reinforced Plastic Composite Structures, by Boris Levenetz (Whittaker Corp.), sec 9-F, 10p. (1.8, 2.33, 2.36)
- 140 Continuous Finishing System for Reinforced Plastics Automotive Parts, by Richard J. Savage and Arthur L. Weiner (General Tire & Rubber Co.), sec 10-P, 4p.
- 141 Semi-Automatic Controls and Techniques in Matched Die Preform Molding, by James Deef (Outboard Marine Corp.), sec 10-B, 4p.
- 142 Continuous Processing of FRP Panels and Related Products, by George R. Huisman (Huisman Associates), sec 10-C, 4p.
- 143 Automation - The Key to Superior FRP Products, by C.A. Sprang and G.I. Davis (The Cincinnati Milling Machine Co.), sec 10-D, 6p.
- 144 Systems Engineering Approaches for Reinforced Plastics Products Manufacturing, by J.F. O-Hora (FMC Corp.), sec 10-E, 6p.
- 145 Prepreg Materials for High Performance Dielectric Applications, by Harry Raech, Jr. and J.M. Kreinik (FMC Corp.), sec 11-A, 6p. (1.3, 1.8, 2.13, 2.24, 2.28, 2.34)
- 146 A New Polyester Resin and Filler System Producing Excellent Flame Resistance and Heat Aging Properties, by W.J. Connolly and A.M. Thornton (Allied Chemical Corp.), sec 11-B, 4p. (1.15, 2.3, 2.42)
- 147 Self-Extinguishing Polyester Resins Based on Tetrabromophthalic Anhydride, by Robert J. Nulph and Richard C. Nametz (Michigan Chemical Corp.), sec 11-C, 6p. (1.15, 2.6, 2.7, 2.24, 2.33, 2.36A, 2.42)

* Not Included in Subject Index.

Ref. No.

- 148 A New Approach to Epoxy Laminating Systems, by J. L. Weich and C. F. Pitt (Union Carbide Corp.), sec 11-D, 8p. (1.8, 2.7, 2.13, 2.21A, 2.24, 2.28, 2.33)
- 149 Cycloaliphatic Epoxy Resins: Premium Properties for Reinforced Plastics and Electrical Insulation, by Elliott Dorman (CIBA Products Co.), sec 11-E, 8p. (1.8, 2.7, 2.12, 2.13, 2.24, 2.33, 2.34, 2.38)
- 150 A New Liquid Aromatic Amine Hardener for Epoxy Resins, by George J. Brouillette (Reichhold Chemicals, Inc.), sec 11-F, 3p. (1.8, 2.24, 2.28)
- 151 New High Temperature Laminates for Aerospace Applications, by T. J. Reinhart (Wright Patterson Air Force Base) and Vance A. Chase (Brunswick Corp.), sec 11-G, 8p. (1.8, 1.11, 1.12, 1.18, 2.3, 2.22, 2.24)
- 152 The Influence of Preimpregnated Roving Processability on the Strength of Filament-Wound Composites, by I. Pekter, J. T. Norton (Aerojet-General Corp.) and J. Feltzin (Atlas Chemical Industries), sec 12-A, 8p. (1.8, 2.32, 2.34)
- 153 Manufacturing Large Structures by Filament Winding, by Charles Tanis (Wright-Patterson Air Force Base), sec 12-B, 4p. (2.24, 2.32, 2.33)
- 154 The Importance of Voids in the Filament-Wound Structure, by James T. Paul, Jr. and J. B. Thomson (Hercules Powder Co.), sec 12-C, 16p. (1.8, 2.3, 2.6, 2.15, 2.34)
- 155 Development of Improved Processes for Filament-Wound Reinforced Plastic Structures, by Oscar Weingart (Aerojet-General Corp.), sec 12-D, 33p. (1.8, 2.24, 2.32, 2.33, 2.34, 2.36, 2.38)
- 156 Damage and Repair Aspects of Filament-Wound Motor Cases, by T. J. Boller, Ralph A. Burkley and Ian R. Butcher (Goodyear Aerospace Corp.), sec 12-E, 10p. (2.32)
- 157 Improved Processing and Fabricating Techniques for Ablative Reinforced Plastic Materials, by Stan Hopkins (U.S. Polymeric Chemicals Inc.), sec 12-F, 4p. (1.35)
- 158 The Synthesis and Testing of Weather Resistant Unsaturated Polyester Resins, by Daniel L. Edwards, P. T. Von Brammer, L. G. Curtis and P. J. Trent (Eastman Chemical Products, Inc.), sec 13-A, 8p. (1.2, 1.15, 1.20, 2.23, 2.37, 2.39)
- 159 A Study of Factors That Affect Water-Resistance of Gel Coats, by E. B. Euchner, C. O. Throne and R. F. Robrecht (The Glidden Co.), sec 13-B, 10p. (1.15, 2.6)
- 160 Fabricating for Improved Corrosion Resistance in Hand Lay-Up and Filament Winding, by Richard D. Rhodes, Jr. and John Yovino (Atlas Chemical Industries, Inc.), sec 13-C, 4p. (1.15, 2.24)
- 161 A Study of the Environmental Resistance of Glass Fibers, by H. E. Simpson (Alfred University) R. B. Lovell (Reichhold Chemicals, Inc.), sec 13-D, 4p. (2.12)
- 162 "Synvarac" Products, by George Spiller (Synvar Corp.), sec 13-E, 8p. (1.35, 2.5, 2.6, 2.24, 2.28, 2.33, 2.36A, 2.40)
- 163 Plastics in the Automotive Industry, by William P. Gobeille (American Motors Corp.), sec 14-A, Abstract Only.*
- 164 What is Required in Materials and Processes to Expand the Use of Reinforced Plastics for Automotive Applications, by J. T. O'Reilly (Ford Motor Co.), sec 14-B, 6p.

* Not Included in Subject Index

- 187 Design and Stress Analysis on Road and Rail Transport Tanks by Michael Edward Kenney (East Lancashire Plastics Limited), sec. 18-F, 14p. (2.24, 2.28, 2.33)
- 188 Recent Developments in Making Large Structures by the Hand Layup Process by Ralph E. Carter and Robert B. Johnson (Reichhold Chemicals, Inc.), sec. 18-G, 3p. (1.15, 2.24, 2.33, 2.38)
- 189 Silane Coupling Agents for Glass-Reinforced Thermoplastic Resins by Edwin P. Plueddemann (Dow Corning Corp.), sec. 19-A, 10p. (1.2, 1.6, 1.9, 1.13, 1.14, 1.15, 1.17, 1.20, 1.34, 2.24, 2.28)
- 190 On the Strengthening of the Roving by Modification of the Finish by John O. Outwater and Michael R. Yendrzski (University of Vermont), sec. 19-B, 10p. (1.8, 2.32, 2.39)
- 191 Compression Shear Evaluation of Glass-Resin Joints by T.D. Schlabach and S. Klosowski (Bell Telephone Laboratories, Inc.), sec. 19-C, 10p.. (1.8, 1.9, 1.13, 1.15, 1.17, 1.17A, 1.20, 2.24, 2.28, 2.34)

Thirteenth Annual Symposium
Technical Progress in Communication Wires and Cables
December 2-4, 1964, Atlantic City
U.S. Army Electronics Laboratories, Fort Monmouth

Papers available from U.S. Army Electronics Laboratories,
Fort Monmouth, New Jersey

Ref. No.

CABLE DESIGN AND TEST

- 192 Apparent Errors in the Measurement of Mutual Capacitance on Longer Lengths of Cable Pair at 1000 cps, by J. V. Buscemi and A. E. Widmer, (Anaconda Wire & Cable Co.), 34p.
- 193 An Airlayable 60 Channel Communication Cable, by J. Bendayan and R. Jocteur (Les Cables de Lyon), 23p. (1.15, 1.17, 1.34)
- 194 The Crosstalk Characteristics of Coaxial Cables Shielded with Electromagnetically Anisotropic Metallic Layers, by H. Kumamaru, (Sumitomo Electric Industries, Ltd.), 9p.
- 195 Some Recent Improvements in Methods of Measuring Dielectric Constant and Loss Characteristics of Polyethylenes for Primary Insulation of Communication Cables, by T. Hazen (Union Carbide Corp.), 23p.

CABLE PERFORMANCE AND APPLICATION

- 196 Placing Methods for Self Supporting Cable, by J. A. Newburger (Bell Telephone Laboratories), 10p. (1.17, 1.19)
- 197 Failure Mechanisms in Ground Support Cables, by A. M. Schwartz (Martin Co.), 25p. (1.7, 1.9, 1.13, 1.15, 1.17, 1.22, 2.24)
- 198 High Strength Alloy Conductors, by A. G. Schuh and J. Penkacik (Martin Co.), 19p.
- 199 Reaction of Silicone Protected Cables to Humidity Environments, by S. A. Holstein (Picatinny Arsenal), 16p. (1.7, 1.33, 2.6)
- 200 Accumulation of Moisture in Plastic Sheathed Cables, by W. M. Hladik, (Bell Telephone Laboratories), 14p. (1.17, 2.8)
- 201 Cable Assembly Standardization - Do's, Don'ts, and How's, by R. D. Hayden and A. H. Mager (Douglas Aircraft Co.), 20p.

CABLE MATERIALS

- 202 New Improved Polyolefin Wire and Cable Resins, by R. J. Martinovich and J. N. Scott (Phillips Petroleum Co.), 22p. (1.17, 1.17A, 2.5, 2.10, 2.13, 2.15, 2.24, 2.32, 2.33, 2.34, 2.38)
- 203 The Electrical Characteristics of Some Resistive Plastics for the Wire and Cable Industry, by R. C. Mildner and P. C. Woodland (Dow Chemical Co.), 128p. (1.17A, 2.13)

Ref. No.

- 204 Progress in the Use of Electrofilm Polypropylene Core Wraps in Cable Construction, by R. Christiansen (Enjay Laboratories), and H. Jehan and A. Slatin (Extrudo Film Corp.), 16p. (1.15, 1.19, 2.8, 2.13, 2.15, 2.24, 2.34, 2.40)
- 205 Dimensionally Expanded Film - A New Approach for Cable Core Wrap, by W.L. Roberts (Superior Cable Corp.), 15p. (1.14, 1.15, 1.17, 1.19, 2.28, 2.40)

PROCESS AND MANUFACTURING

- 206 A Mathematical Comparison of Thermal Barrier Properties of Various Cable Core Insulation Tapes, by Dr. A.C. Mueller and C.D. Palmer (E.I. DuPont & Co.), 9p. (1.15, 1.19, 2.40)
- 207 Effect of Extrusion Processing on Environmental Stress Crack Resistance of Polyethylene Sheathing Compounds, by J.R. Apen (Bell Telephone Laboratories), 19p. (1.17, 2.10, 2.38)
- 208 How to Improve Wire Quality and Increase Equipment Utilization, by W.C. Hutchins (General Electric Co.), 11p.
- 209 Individual Cable Identification by a Thermal Color Transition Method, by F.L. Ward (Boeing Co.), 11p. (1.17)
- 210 The Use of Heat Shrinkable Silicone Rubber on Cables and Cable Assemblies, by M. Nakonechny, D.E. Weyner, and G.L. Wehmueeller (Dow Corning Corp.), 12p. (1.7, 2.13, 2.15, 2.40, 2.41)
- 211 Some Effects of Wire Pre-Heat and Cooling Variables on Properties of Polyethylene Insulation on Telephone Singles, by William J. Cox (Texas Eastman Co.), 20p. (1.17, 2.2, 2.24, 2.39)

HIGH TEMPERATURE INSULATION AND WIRES

- 212 A New Radiation Cross-Linked Polyalkene/Polyvinylidene Fluoride General Purpose Wire, by Dr. V.L. Lanza and R.M. Halperin (Raychem Corp.), 14p. (1.9, 1.13, 1.34, 1.35, 2.12, 2.13, 2.15, 2.16, 2.24, 2.39)
- 213 Teflon-Pyre ML Wire Insulation System, by J.R. Learn and M.P. Seegers (Hi-Temp Wires Co.), 14p. (1.9, 1.18, 2.2, 2.5, 2.13, 2.15, 2.24, 2.37, 2.39, 2.40)
- 214 Properties of Various Wire and Cable Constructions Insulated with H-Film, by W.L. Greyson and J. I. LaSala (Tensolite Insulated Wire Co.), 6p. (1.9, 1.17, 1.18, 1.20, 1.34, 2.7, 2.13, 2.15, 2.18, 2.24, 2.33, 2.40)
- 215 Modern Silicone Compounds Answer the Challenges of Industry, by M.G. Noble and R.M. Savage (General Electric Co.), 14p. (1.33, 2.3, 2.4, 2.13, 2.24, 2.36, 2.42)
- 215A A Second Look at Foamed Dielectrics for Microwave Use, by M. Pomerantz and W. Mayo (U.S. Army Electronics Laboratories), 12p. (1.17, 2.6, 2.13, 2.15)

National Electronic Packaging and
Production Conference
June 9, 10, 11, 1964. New York City

Proceedings available from Industrial and
Scientific Conference Management, Inc.
222 West Adams Street, Chicago 6, Illinois - \$11.00

Ref. No.

- 216 Design and Application for a Multilayer Board Interconnection Design, by
E. C. Williams and W. S. Rigling (Martin Co.), p. 165-169
(1.4, 1.8, 1.9, 1.15, 1.18, 1.22, 1.33)
- 217 Quick Determination of Thermal Conductivity of Potting Compounds by a
Transient Technique, by E. H. Gale (General Electric Co.), p. 217-227
(1.8, 2.40)
- 218 Thermal Conductivity of Resin Systems, by H. Hirsch and F. Koved,
(General Precision Aerospace), p. 228-233 (1.8, 2.40)
- 219 Thermal Dissipation in Embedded Electronic Circuits, by W. W. Staley
(Westinghouse Electric Corp.), p. 234-242 (1.8, 2.40)
- 220 Trends in the Selection of Liquid Resins for Electronic Packaging, by
D. C. Wolf (North American Aviation) p. 243-249
(1.8, 2.6, 2.13, 2.40)
- 221 Transfer Molded High Density Modules, by Hugo L. Uglione, Jr. and
Allen R. Bell, Jr. (Martin Co.), p. 250-261 (1.8)
- 222 The Foam Attenuated Sandwich Technique of Packaging for Vibration and
Shock Suppression by W. M. Flynt (Ling-Temco-Vought) p. 336-347.
(1.22, 2.26)
- 223 Can Printed Circuit Boards Withstand High G Environments? by D. E.
Longmire (Goodyear Aerospace Corp.), p. 381-386. (1.8, 2.24, 2.26)

Stability of Plastics
Regional Technical Conference
June 4-5, 1964, Washington
Society of Plastics Engineers, Inc.,
Baltimore-Washington Section

Proceedings available from Society of Plastics Engineers, Inc.,
65 Prospect Street, Stamford, Connecticut

Ref. No.

FUNDAMENTALS OF POLYMER STABILITY

- 224 Principles of Polymer Stability, by H.F. Mark, and S.M. Atlas,
p. 5-14, (1.2, 1.6, 1.8, 1.11, 1.13, 1.15, 1.22, 1.34, 2.7)
- 225 Polyaromatic Heterocycles by C.S. Marvel (University of Arizona),
p. 14-29 (1.27, 1.29, 2.7)
- 226 Deformation and Failure of Plastics and Elastomers by Thor Smith
(Stanford Research Institute) p. 29-38 (1.7, 1.35)
- 227 Mechanisms Contributing to the Autoxidation of Hydrocarbon Polymers
by W. Lincoln Hawkins (Bell Telephone Laboratories, Inc.), p. 38-54
(1.11, 1.17, 1.19, 1.20)

MECHANICAL STABILITY

- 228 Practical Applications of Rheology to Plastics Problems by S. Matsuoka
and T.W. Huseby (Bell Telephone Laboratories, Inc.), p. 54-68
(1.17, 2.24, 2.33, 2.35, 2.36)
- 229 Current Techniques in the Engineering Analysis of Viscoelastic Materials
by M.L. Williams, Jr., (California Institute of Technology) p. 68-75
- 230 Practical Aspects of Physical Property Measurements as a Function of
Environment by Ross H. Supnik and Melvin Silberberg (Plas-Tech
Equipment Corp.), p. 75-88 (1.2, 1.13, 1.20, 2.24)
- 231 Experimental Investigations on Fracture of Polymers by M.G. Sharma
and C.K. Lim (Pennsylvania State University), p. 88-118 (1.7, 2.36)

DEGRADATION OF CHEMISTRY

- 232 Mechanisms of Thermal and Oxidative Degradation of Condensation
Polymers by Robert T. Conley (Seton Hall University) p. 118-196
(1.8, 1.11, 2.7, 2.37, 2.43)
- 233 Thermal Decomposition of Unsaturated Materials by William J. Bailey
(University of Maryland), p. 196-207 (1.7, 1.17, 1.19, 1.34, 2.7, 2.40)
- 234 The Chemistry of Poly (Vinyl Chloride) Stabilization by Organotin
Compounds by A.H. Frye, R.W. Horst (Cincinnati Milling Machine Co.).
and Marko A. Paliobagis (Carlisle Chemical Works, Inc.), p. 207-236
(1.34, 2.7, 2.40)
- 235 The Photodegradation of Poly (Alkylene Polysulfides) - "Thiokol" Rubbers
by Lawrence G. Isaacs and Robert B. Fox (U.S. Naval Research
Laboratory) p. 236-246 (1.7, 1.21, 2.12, 2.18, 2.37)
- 236 Biochemical Degradation of Polymers by R.K. Kilkarni (Walter Reed
Army Medical Center), p. 246-253 (1.2, 1.6, 1.9, 1.13, 1.17, 1.20, 1.34)

**STABILIZATION OF POLYMERS AND PREPARATION
OF NEW HIGH-TEMPERATURE POLYMERS**

- 237 Stabilization of Polypropylene by R.H. Hansen, T. DeBenedictis and W.M. Martin (Bell Telephone Laboratories, Inc.), p.253-257 (1.19, 2.4, 2.12, 2.21A)
- 238 Effect of Stearate Processing Aids Upon Polypropylene Stability by C.A. Russell (Bell Telephone Laboratories, Inc.), p.257-286 (1.19, 2.38)
- 239 Wavelength Sensitivity or Activation Spectra of Polymers by R.C. Hirt and N.Z. Searle (American Cyanamid Co. p.286-303 (1.6, 1.14, 1.15, 1.17, 1.19, 1.20, 1.34, 2.37)
- 240 Water Resistance of Liquid Urethane Vulcanizates by Robert J. Athey (E.I. duPont de Nemours & Co., Inc.), p.303-324 (1.22, 2.3, 2.6, 2.24, 2.33)
- 241 Investigation of Thiazole Polymers for Thermally Stable Plastics by W.C. Sheehan (Southern Research Institute), p.324-344 (1.13, 1.15, 1.17, 1.27, 1.29, 2.4, 2.6, 2.7, 2.8, 2.18, 2.24, 2.32, 2.33, 2.36, 2.40, 2.42)
- 242 Polyimides - New High Temperature Polymers
1. H-Film - A Polypyromellitimide Film by J.F. Heacock and C.E. Berr (E. I. duPont de Nemours & Co. Inc.), p.344-354, (1.18, 2.3, 2.6, 2.7, 2.12, 2.13, 2.15, 2.22, 2.24, 2.32, 2.33, 2.39, 2.40)
- 243 2. Polyimides - New Polymeric Binders for High Temperature Use by J.R. Courtright and C.K. Ikeda (E.I. duPont de Nemours & Co. Inc.), p.364-371 (1.18, 2.3, 2.7, 2.12, 2.13, 2.15, 2.22, 2.24, 2.34)

Engineering With Thermoplastics
Regional Technical Conference
April 1, 1964, Akron
Society of Plastics Engineers, Inc. Akron Section

Proceedings available from Society of Plastics Engineers, Inc.
65 Prospect Street, Stamford, Connecticut

- 283 Chemical Constitution and Flame Retardance of Rigid Urethane Foams by Eugene A. Dickert (National Aniline Div., Allied Chem. Corp.), p. 23-38 (2.42, 2.43)
- 284 Sandwich Panel Use Developments by J. W. Schneller (National Gypsum Co.), p. 39-41 (1.22)

Plastics and Adhesives In the Space Age
Regional Technical Conference
May 13-14, 1964, Garden City, L.I.
Society of Plastics Engineers, New York Section

Proceedings Available from Society of Plastics Engineers, Inc.
65 Prospect Street, Stamford, Connecticut

Ref. No.

SPACE APPLICATIONS

- 285 Reinforced Plastics for Project Fire Flight Re-Entry Vehicle by Sam J. Dastin (Republic Aviation Corp.) p. 1-5 (1.11, 1.15, 1.33, 2.13, 2.24, 2.25, 2.28, 2.33, 2.40, 2.41)
- 286 Space Umbrella by Sam F. Monroe (General Dynamics Corp.), p. 6-16, (1.8, 1.11, 2.24, 2.34)
- 287 Reinforced Plastics in Aerospace Applications - Future Outlook. Past Performance by Marvin S. Hochberg (McDonnell Aircraft Corp.) p. 17-22, (1.4, 1.8, 1.11, 1.15, 1.33)
- 288 Plastics Materials for Aerospace Cryogenic Insulation by John J. Whelton, Sr. (North American Aviation) p. 23-37 (1.8, 1.11, 1.13, 1.17, 1.22, 2.6, 2.8, 2.12, 2.28, 2.33, 2.34, 2.40)

ABLATION AND HEAT SHIELDS

- 289 Thermal Shield Bonding Systems for Re-Entry Vehicles by L.H. Shenker, (Gen. Electric Co.), p. 38-54 (1.8, 1.11, 1.13, 1.14, 1.16, 1.21, 1.22, 2.24, 2.33, 2.34, 2.36)
- 290 A New Fiber for Reinforced Plastic Aerospace Applications by Samuel S. Spencer (Johns-Manville Corp.), p. 55-63 (1.11, 2.12, 2.41)

ADHESIVES

- 291 Adhesives for the Installation of Solar Cells on Photovoltaic Concentrating Panels by John E. Anderson, (Boeing Company), p. 64-73 (1.8, 1.11, 1.13, 1.15, 1.21, 1.33, 2.12, 2.19, 2.21A, 2.24, 2.36A, 2.37)
- 292 Heat Resistant and Structural Adhesives by Leonard Suffredini (Narmco Div., Telecomputing Corp.), p. 74-77 (1.8, 1.11, 1.18, 2.21A, 2.34)
- 293 The Use of Adhesives in the Fabrication of Solar Panel Substrates for Space Vehicles by Harold Rosenbaum (Ryan Aeronautical Co.), p. 78-86 (1.8, 1.13)
- 294 Investigations of Structural Adhesives for Cryogenic Application by Bruno Pascuzzi, (Boeing Company), p. 87-103 (1.8, 1.13, 1.22, 2.20, 2.21A, 2.24, 2.34)

Ref. No.

SPACE MATERIALS

- 295 Whisker Reinforced Plastics for Space Applications by Willard H. Sutton, (General Electric Co.), p. 104-119 (1.8, 1.13, 1.15, 1.16, 1.18, 1.22, 1.27, 2.24, 2.33, 2.34, 2.36)
- 296 Progress in Heat Resistant Resins, by Stuart A. Miller, (Brunswick Corp.), p. 120-123 (1.8, 1.18)
- 297 Application of Volume Resistivity Measurements to Polymerization of Filament Wound Composites by Dr. L.L. Gelb, (Hercules Powder Co.), p. 124-133 (1.8, 2.6, 2.13)
- 298 Glass Fibers in Aero-Space by David G. Mettes, (Owens Corning Fiberglass Corp.), p. 134-140 (1.8, 2.13, 2.24, 2.28, 2.33, 2.34)

**ABS Plastics
Regional Technical Conference

- 338 Filament Wound Railroad and Truck Transport Tanks by Edwin C. Young,
(Black, Sivalls & Bryson), p.1-5 (1.11, 1.22)
- 339 Molded Fiber Glass Insulations in Transportation by G.J. Hannes,
(Johns-Manville Fiber Glass, Inc.), p.6-11 (1.17)
- 340 The Development of a New Epoxy Extender by John E. Dreich, (The
Neville Chemical Co.), p.12-16 (1.8, 2.12, 2.13, 2.24, 2.33, 2.36A)
- 341 Rapid Cycle Molding of Improved Surface Laminates by C.F. Thompson,
(The Dow Chemical Co.), p.17-25 (1.15, 1.20, 2.24, 2.33, 2.38)
- 342 Fiber Reinforced Plastics Parts by the Water Slurry Process for the
Transportation Industry by Glenn I. Davis, (Cincinnati Milling Machine
Co.), p.26-30 (2.39)
- 343 Hotmold Gelcoats and Their Application by George G. Hooper, (Ferro
Corporation), p.31-34 (1.15)
- 344 Aerospace Applications of Plastics by I.J. Gruntfest, (General Electric
Co.), p.35-40 (1.2, 1.8, 1.9, 1.15, 1.17, 1.18, 1.21, 1.22)
- 345 Reinforced Plastics Fabrication Processes and Controls by Richard A.
Whitaker, (Thompson Ramo Wooldridge), p.41-55 (1.8, 1.11, 1.15,
1.18)
- 346 Materials & Process Reproducibility for Automotive FRP Laminates
by J.W. Runkle (Owens-Corning Fiberglas Corp.), p.56-76 (1.15, 2.24)
(1.15, 2.24)

Plastics in the Electrical Industry
Regional Technical Conference
May 18, 1964, Milwaukee
Society of Plastics Engineers, Inc., Milwaukee Section

Proceedings available from Society of Plastics Engineers, Inc.,
65 Prospect Street, Stamford, Connecticut

Ref. No.

- 347 Why Use a Thermosetting Molding Material for Electrical Parts? by Carlo F. Martino, (Union Carbide Corp.), p.1-9 (1.1, 1.2, 1.3, 1.4, 1.11, 1.14, 1.5, 1.17, 1.19, 1.20, 1.33, 1.34, 2.6, 2.13, 2.14, 2.21A, 2.24, 2.27, 2.33, 2.36A)
- 348 Actual Molded Properties Versus Data Sheet Properties in the Electrical Industry by Paul E. Fina, (U.S. Polymeric Chemicals, Inc.), p.10-17 (1.3, 1.4, 1.8, 1.11, 1.15, 1.33, 2.13, 2.14, 2.21A, 2.24, 2.33, 2.36A)
- 349 Arc and Track Resistance Tests by Louis L. Korb, (Plastics Engineering Co.), p.18-32 (1.2, 1.4, 1.8, 1.9, 1.11, 1.14, 1.15, 1.17, 1.19, 1.33, 2.14)
- 350 Thermosetting Urethane Compounds for the Electrical Industry by Kenneth D. Cressy, (Furane Plastics, Inc.), p.33-40 (1.3, 1.8, 1.9, 1.17, 1.18, 1.22, 2.6, 2.13, 2.14, 2.15, 2.16, 2.21A, 2.24, 2.42)
- 351 Electrical Properties - Effects of Molding and Postbake by Harold D. Jost, (General Electric Co.), p.41-47 (1.11, 2.6, 2.13, 2.15, 2.21A)
- 352 Recent Advances in Alkyd Molding Compounds by R.E. Carpenter, (Allied Chemical Corp.), p.48-54 (1.11, 1.15, 2.3, 2.13, 2.14, 2.15, 2.24, 2.28)
- 353 Phenolics in the Electrical Industry by Edward F. Borro, Sr., (Durez Plastics Division), p.55-63 (1.3, 1.11, 2.3, 2.6, 2.13, 2.15, 2.21A, 2.23, 2.24, 2.28, 2.33, 2.36A)
- 354 New Concepts for Thermosets by William A. Laurie, (The Fiberite Corp.), p.64-72 (1.4, 1.8, 1.11, 2.6, 2.13, 2.14, 2.15, 2.24, 2.39)
- 355 Choosing the Right Epoxy is Easy by Charles E. Chastain, (High-Strength Plastics Corp.), p. 73-82 (1.8, 2.6, 2.13, 2.21A, 2.22, 2.24, 2.36A)
- 356 Polyimide Resin - A New High Temperature Plastic by N.W. Todd, (E. I. duPont de Nemours & Co., Inc.), p.83-93 (1.18, 2.7, 2.13, 2.14, 2.15, 2.21A, 2.22, 2.24, 2.33, 2.36A)
- 357 Epoxy Molding Powders: A New Method of Encapsulation for Welded Modules by Hugo L. Uglione, Jr., (Martin Co.), p.94-104 (1.8, 2.6, 2.13, 2.15, 2.24, 2.36A, 2.40, 2.42)
- 358 Epoxy Molding in the Electrical Industry by Virgil G. Lorenzini, (Hysol Corp.), p.105-111 (1.8)
- 359 Thermoset as Integrated Elements in the Design of Reliable Control and Computing Circuitry, by F.F. Stucki, (Lockheed Missiles & Space Co.), p.112-115 (1.8)

Symposium on Polypropylene Fibers
September 17-18, 1964, Birmingham
Sponsored by Southern Research Institute

Proceedings available from Southern Research Institute
2000 Ninth Avenue South
Birmingham, Alabama 35205

Ref. No.

- 359A Problems in Expendability by George R. Thomas, (U.S. Army Natick Laboratories), p.3-12
- 360 Problems Encountered in the Development of the Commercial Polypropylene Fiber by Victor L. Erlich, (Reeves Brothers, Inc.), p.13-32 (1.17, 1.19)
- 361 Polypropylene Fibers -- Properties and Applications by Reginald W. Ivett, (Hercules Powder Company) p.33-52 (1.19, 2.21A, 2.23, 2.24, 2.36A, 2.38)
- 362 Market Prospects for Polypropylene Fibers by W. Paul Acton, (E. B. & A. C. Whiting Company), p.53-60
- 363 The Mechanical Properties of Polypropylene as Related to Ballistic Applications by R.C. Laible, (U.S. Army Natick Laboratories), p.61-72 (1.19, 2.24, 2.36)
- 364 Relationships Between Structural Parameters and Tenacity of Polypropylene Monofilaments by W.C. Sheehan, R.E. Wellman, and T.B. Cole (Southern Research Institute), p.73-99 (1.19, 2.24, 2.33)
- 365 Theoretical Aspects of Polypropylene Dyeing by Milton Farber (United States Rubber Company), p.100-120 (1.2, 1.6, 1.13, 1.15, 1.19, 2.7)
- 366 Mechanisms of the Thermal Decomposition of Polypropylene by William J. Bailey, (University of Maryland), p.121-136 (1.7, 1.17, 1.19, 1.34, 2.7, 2.22, 2.40)
- 367 The Effects of Morphology, Antioxidants, and Copper on the Oxidation of Polypropylene by Ralph H. Hansen, (Bell Telephone Laboratories), p.137-182, (1.7, 1.9, 1.19, 1.20, 1.34, 2.4, 2.12, 2.21A, 2.40)
- 368 $TE^{0.50}$, An Index for Relating Fiber Tenacity and Elongation by Arnold J. Rosenthal, (Celanese Corporation of America), p.183-217 (1.2, 1.6, 1.13, 1.17, 1.19, 1.34, 2.24, 2.36A)

Division of Organic Coatings and Plastics Chemistry
of American Chemical Society
August-September 1964, Chicago

Proceedings (Document Volume 24, No. 2) available from the
Secretary, American Chemical Society, Division of Organic
Coatings and Plastics Chemistry
1815 North University, Peoria, Illinois

GENERAL PAPERS

- 382 A Cast Flexible Ester-Urethane Polymer, by C.H. Smith (Bendix Corp.), p.86-98 (1.22, 2.2, 2.5, 2.6, 2.12, 2.13, 2.16, 2.24)
- 383 Thermal Conductivity of Castor Oil-Based Rigid Urethane Foams, by C.K. Lyon, V.H. Garrett, D.R. Black, T.H. Applewhite, and L.A. Goldblatt (Agricultural Research Service), p.99-102 (1.22, 2.3, 2.6, 2.28)
- 384 The Gelation Effect of Tetra Alkyl Titanates on Elastomeric Coating Materials, by Max Kronstein, M.R. Carroad (New York University) and J.J. Byrd (Deleware Scientific) p.103-113*
- 385 Color Stability of White, Oil-Based and Emulsion Paints, by G.E. McManis, L.E. Gast, and J.C. Cowan (Northern Regional Research Laboratory), p.114-122*
- 386 Novel Methods for the Production of Foamed Polymers: II. Nucleation of Dissolved Gas by Finely Divided Metals, by R.H. Hansen and W.M. Martin (Bell Telephone Laboratories, Inc.), p.123-128 (1.17, 2.13)
- 387 Photodegradation of Poly(Methylene Di- and Tetrasulfide) and Poly(Ethylene Di- and Tetrasulfide), by L.G. Isaacs and R.B. Fox (U.S. Naval Research Laboratory), p.129-134 (1.21, 2.12, 2.18, 2.37)
- 388 Oxidative Degradation of Epoxy Resins, by R.T. Conley and Mark Danco (Seton Hall University), p.135-149 (1.8, 2.7, 2.12, 2.21A, 2.37)
- 389 Polyhexamylmelamine and Related Polymers, by J.K. Gillham and J.C. Petropoulos (American Cyanamid Co.), p.150-163 (1.8, 1.11, 1.15, 1.33, 2.3, 2.6, 2.7, 2.12, 2.13, 2.21A, 2.22, 2.33)
- 390 Preparation of Oxazoline-Containing Polyesters, by W.J. DeJarlais, L.E. Gast, and J.C. Cowan (Northern Regional Research Laboratory), p.164-165 (1.15)
- 391 Physical and Chemical Behavior of Some Refractory Reinforced Phenolics, by A.M. Melnick, Richard A. Tanzilli, Lester Cohen, and R.A. Florentine, (General Electric Co.), p.170-173 (1.11, 2.22, 2.40, 2.41, 2.43)
- 392 Marine Resistance as Measured by the Taber Abrader, by A.E. Sherr and F.G. Martin (American Cyanamid Co.), p.174-179 (1.15, 2.36)

MEDICAL APPLICATIONS OF PLASTICS

- 393 Materials in Biomechanical Applications, by F. Leonard (Walter Reed Army Medical Center) (Abstract Only) p. 188*
- 394 The Medical Silicones, by S.A. Braley, Jr., p.189-194 (1.33, 2.7, 2.13, 2.15, 2.24)
- 395 Review of the Activity of the PMA Plastics Committee, by E.O. Krueger, p.195-200
- 396 The Use of Plastics in Ophthalmology, by W. Stone, Jr., H. Yasuda, M.F. Refojo, (Massachusetts Eye and Ear Infirmary), p.201-206 (1.2, 1.9, 1.17, 1.33)
- 397 Permeabilities of Polymers and Their Medical Applications: Corneal Polymer Implants, by H. Yasuda, M.F. Refojo, W. Stone, Jr., (Massachusetts Eye and Ear Infirmary), p.207-208 (2.8)
- 398 Sterilization of Polymers, by H. Yasuda, M.F. Refojo, and W. Stone, Jr., (Massachusetts Eye and Ear Infirmary), p.209-215 (1.2, 1.6, 1.7, 1.9, 1.13, 1.17, 1.19, 1.20, 1.33, 1.34, 2.4, 2.6, 2.8, 2.18)
- 399 Hydro Gels from - 2 - Hydroxyethyl Methacrylate and Propylene Glycol Monoacrylate, by M.F. Refojo, and H. Yasuda (Massachusetts Eye and Ear Infirmary), p.216-222 (1.2, 1.13, 1.17, 2.6, 2.21A)
- 400 The Use of Monodisperse Latex Particles in Medical Research, by J.W. Vanderhoff (Dow Chemical Co.), p.223-232 (1.20)
- 401 Synthetic Vascular Grafts - Past, Present and Future, by R.L. Kronenthal (Ethicon, Inc.), p.233-241 (1.2, 1.13, 1.15, 1.17, 1.22, 1.33, 1.34, 2.6, 2.24)
- 402 Plastics in Artificial Kidney and Heart-Lung Equipment, by R.R. Harrison, and N.J. Kartinos, (Baxter Laboratories, Inc.), Abstract Only*
- 403 Plastics and Polymers in Surgical Dressings and Bandages, by L. Brickman (Johnson & Johnson), p.243-248 (1.2, 1.3, 1.4, 1.6, 1.7, 1.17, 1.22, 1.34, 2.24)
- 404 The Use of Polymeric Materials for Surgical Adhesives, by R.D. Falb, R.I. Leininger, and C.W. Cooper (Battelle Memorial Institute), p.249-257 (1.2, 1.4, 1.7, 1.8, 1.15, 1.34, 2.2)
- 405 Dental Applications of Polymers, by G.M. Brauer, p.258-266 (1.2, 1.8, 1.11, 1.13, 1.14, 1.15, 1.20, 1.21, 1.33, 1.34, 2.28, 2.33, 2.36A)

* Not Included in Subject Index.

**CHEMISTRY OF MATRICES USED IN FILAMENT
WINDING SYMPOSIUM**

RESIN CHARACTERIZATION AND MECHANISMS OF REACTION

- 406 The Characterization of Epoxy Resins with the Combined Techniques of Thin-Layer Chromatography and Infrared Spectroscopy, by H.L. Spell and R.D. Eddy (Dow Chemical Co.), p.267-272 (1.8, 2.7, 2.37)
- 407 Application of Gel Permeation Chromatography to the Characterization of Epoxy Resins, by B.H. Miles (Dow Chemical Co.), p.273-281 (1.8, 2.7)
- 408 Kinetics of Epoxy Polymerization, by J. Feltzin, M.K. Barsh, E.J. Peer, and I. Petker, (Aerojet-General Corp.), p.282-292 (1.8, 2.21A, 2.43)
- 409 Reaction of Dicyandiamide and Epoxy Resins: Preliminary Mechanism Study, by H.H. Levine (Whittaker Corp.), p.293-298 (1.8, 2.37)
- 410 BF_3 Catalyzed Reactions of Epoxy Compounds, by A.J. Landua, (Shell Chemical Co.), p.299-308 (1.8, 2.4, 2.7, 2.43)

**EFFECTS OF RESIN AND CURING AGENT ON FINAL
RESIN PROPERTIES**

- 411 Mechanical Properties of Epoxy Castings and Composites Cured With Ethyl Methyl Imidazole, by W.A. Harding and S.H. Christie III (Shell Chemical Co.), p.309-314 (1.8, 2.13, 2.24, 2.28, 2.32, 2.33, 2.34, 2.36A)
- 412 Structure-Property Relationships for Amine-Cured Epoxy Filament-Winding Resins, by J.R. Griffith and J.E. Cowling (U.S. Naval Research Laboratory), p.315-317 (1.8, 2.7, 2.24, 2.28, 2.33)
- 413 The Chemistry of Epoxy Resins Used as Bonding Agents for Filament Wound Structures, by J.J. Madden, A.S. Burhans, and C.F. Pitt (Union Carbide Corp.), p.318-334 (1.8, 2.21A, 2.24, 2.28, 2.33, 2.36, 2.36A, 2.38)

**FACTORS AFFECTING THE PERFORMANCE OF
FILAMENT-WOUND COMPOSITES**

- 414 Choosing Resin Matrices for Filament Winding Corrosion Resistant Equipment by A.F. Torres, R.D. Rhodes, and J. Yovino (Atlas Chemical Industries, Inc.), p.336-339 (1.8, 1.15)
- 415 Material Considerations for High Temperature Structural Filament Wound Applications by J.A. Martenson (U.S. Polymeric Chemicals, Inc.), p.340-350 (1.8, 1.11, 2.6, 2.21A, 2.22, 2.24, 2.28, 2.34)
- 416 Thermal and Mechanical Methods of Improving the Wetting and Epoxy Resin/Fiberglass Bond Strength of Filament-Wound Articles, by H.L. Jones, A.N. Cianciarulo and R.L. Webb, (CIBA Products Co.), p.351-359 (1.8, 2.34, 2.39)
- 417 Glass-Resin Interaction of Filament Wound Composites, by P.G. Conrad and F.J. Darms, Jr. (Aerojet-General Corp.), p.360-367 (1.8, 1.15, 2.32, 2.33)
- 418 Crack Propagation Resistance of Thermosetting Resins, by F.J. McGarry (Massachusetts Institute of Technology), p.368-373 (1.2, 1.8, 1.15, 1.20, 2.21A, 2.43)

Conference on Electrical Insulation
October 11-14, 1964, Cleveland, Ohio
National Academy of Science - National Research Council

1964 Annual Report available from Printing and Publishing
Office, National Academy of Sciences - National Research
Council, Washington 25, D.C.

Ref. No.

- 419 Electrical Conductivity as a Function of Pressure in Five Conjugated Aromatic Monomers, by R.G. Fitzgerald (Sandia Corp.), p.1-4*
- 420 Cavitation in Transformer Oil Due to Electric Fields, by N. Klein, Y. Amariglio, and E. Burstein (Israel Institute of Technology), p.5-7.*
- 421 The Effect of Hydrogen Acceptors on Electrical Conductivity of Transformer Oil and Liquid Paraffin Under Very High Electrical Stress, by L. Angerer (Battersea College of Technology, London), and H. Tropper (Queen Mary College, London), p.8-13.*
- 422 Electric Conduction in Sodium Chloride and Soda-Lime Glass, by J.H. Calderwood, K.C. Kao, and M.F. Pac Soo (Royal College of Advanced Technology, London), p.14-20.*
- 423 Direct-Current Conductivity of Polyethylene at High Field-Strengths, by Gunther Stetter (Technische Hochschule, Munchen, Germany), p.21-24 (1.17, 2.13, 2.21A)
- 424 Irradiation of Polyethylene and Electrical Conductivity - The Behavior of Carrier Traps in Polyethylene Under Gamma-Ray Irradiation of Kichinosuke Yahagi (Waseda University, Japan), and Kenichi Shinohara, (The Institute of Physical and Chemical Research, Japan), p.25-28 (1.17, 2.13, 2.18, 2.20, 2.21)
- 425 Effect of High-Energy Radiation on Electric Conduction of Polyethylene, by M. Ieda, M. Kosaki, Y. Yamada, and U. Shinohara (Nagoya University, Japan), p.29-33 (1.17, 1.19, 2.13, 2.18, 2.21A)
- 426 The Dielectric Properties of Some Poly(Fluoroalkyl Vinyl Ethers), by H. Sorkin, W.W. Graessley, J.A. Manson, and J.H. Zufall, (Air Reduction Co., Inc.), p.34-35 (2.13)
- 427 Simultaneous Dielectric Constant and Volume Measurements on Liquids at High Pressures, by Norman L. Brown (National Bureau of Standards), p.36-40.*
- 428 Net Positive Charge Accumulation at Dielectric Surfaces Under AC Corona, by N.M. Bashara and F.M. Green (University of Nebraska), p.41-42.*
- 429 Ionization and Attachment Coefficients in Perfluorocarbon Gases, by J.C. Devins and R.J. Wolff (General Electric Co.), p.43-49.*
- 430 Insulating Films of Boron Nitride on Copper Substrates, by R.R. Haberecht, R.J. Patterson, and R.D. Humphries (Texas Instruments, Inc.), p.50-52*

* Not Included In Subject Index

**Adhesives and Elastomers for Environmental Extremes
Seventh National Symposium
May 20 - 22, 1964, Los Angeles
Society of Aerospace Materials and Process Engineers**

Proceedings published by the Society of Aerospace Materials and Process Engineers, Los Angeles Section.

Ref. No.

- 455 High and Low Temp. Adhesives - Where We Stand, by R. C. Kausen (A. D. Little Co.) 51 p. sec. 1 (1.1, 1.7, 1.8, 1.11, 1.12, 1.13, 1.18, 1.22, 1.25, 1.27, 1.28, 1.29, 1.32, 1.33, 1.34, 2.2, 2.3, 2.7, 2.20, 2.21A, 2.22, 2.34)
- 456 High Temperature Epoxy Resins, by Dr. H. L. Lee (Epoxylite Corp.), 13 p. sec. 2 (1.8, 2.2, 2.21A, 2.22, 2.34)
- 457 Development of Conductive Adhesives at -67° F., by L. W. Hartzel and S. S. Sakonbut (Monsanto Research Corp.), 18 p. sec. 3 (1.8, 1.21, 1.22, 1.33, 2.2, 2.13, 2.21A, 2.24)
- 458 Low Temp. Curing Adhesives for Aerospace Applications, by E. J. Gunter and M. J. Sanger (Aerojet General Corp.), 19 p. sec. 4 (1.7, 1.8, 1.11, 1.22, 2.2, 2.3, 2.21A, 2.24)
- 459 A Technique for Bonding New Thermally Stable Aromatic Polymers to Metal Surfaces, by C. R. Ruffing and E. J. Traynor (Westinghouse Research Labs), 16 p. sec. 5 (1.13, 1.18, 2.2, 2.12, 2.13, 2.21A, 2.22, 2.34)
- 460 R. T. V. Silicones As Sealants & Adhesives for Cryogenic Applications, by F. A. Schreihans and D. E. Robinson (North American Aviation, Inc.), 29 p. sec. 6 (1.33, 2.20, 2.24, 2.28, 2.33, 2.36)
- 461 Evaluation of Structural Adhesives For Potential Cryogenic Usage, by L. M. Roseland (Douglas Aircraft Co.), 17 p. sec. 7 (1.8, 1.11, 1.13, 1.22, 2.2, 2.20, 2.21A, 2.24, 2.30, 2.34, 2.40)
- 462 Electrically Energized Adhesive Bonds, by N. E. Haget, Jr. (Armstrong Cork Co.), 11 p. sec. 8 (1.6, 1.8, 1.11, 1.34, 2.2, 2.21A, 2.34)
- 463 Development of Elastomeric Adhesives for Entry Satellites, by W. L. Vaughan (Lockheed-Georgia Company), 26 p. sec. 9 (1.8, 1.11, 1.13, 1.33, 2.2, 2.20, 2.21A, 2.22, 2.24, 2.34, 2.40)
- 464 Development of A High Temp. Aerospace Structural Adhesive, by H. P. Owen (General Dynamics -Fort Worth), 29 p. sec. 10 (1.8, 1.11, 1.12, 2.2, 2.12, 2.21A, 2.34)
- 465 Adhesive Bonding of Insulation for Temperature Extremes Cryogenic to Re-entry, by J. K. Kuno (NARMCO Materials Division), 35 p. sec. 11 (1.8, 1.11, 1.12, 1.13, 1.18, 1.22, 1.34, 2.2, 2.3, 2.20, 2.21A, 2.22, 2.34)
- 466 Properties of Nitroso Elastomers, by C. B. Griffis and M. C. Henry (Quartermaster Research & Engr. Command, U.S. Army), 15 p. sec. 12.

Ref. No.

- 467 Elastomer for Use in Cryogenic Environment, by G.M. LeFave, R. Gamero, H.M. Moore (Coast Proseal & Mfg. Co.), 14p. sec. 13 (1.9, 1.13, 1.16, 1.19, 1.22, 1.33, 2.2, 2.7, 2.20, 2.24, 2.30)
- 468 Resilient Flame Retardant - High Strength Silicone Elastomers, by Joseph Caprino (General Electric Co.), 12 p. sec. 14 (1.33, 2.13, 2.15, 2.24, 2.26, 2.28, 2.42)
- 469 Characteristics of Some Elastomers in the Space Environment, by W.M. Fassell, M. Rivera, W.Q. Carson (Philco Corp.), 25 p. sec. 15 (1.8, 1.9, 1.13, 1.33, 2.12, 2.18, 2.19, 2.22)
- 470 Silicones for Ablative Applications, by C.L. Whipple, F.A. Smith, D.G. Piper (Dow Corning Corp.), 25 p. sec. 16 (1.9, 1.33, 2.24, 2.41)
- 471 Thermal Insulative Features of Silicone Rubbers, by William Bobear, and Thomas J. Gair (General Electric Co.), 15 p. sec. 18 (1.33, 2.41)
- 472 The Effects of Solid Propellant Rocket Exhaust on Elastomeric Protective Coatings, by W.S. Rigling, J. Penkacik, and E.C. Williams (Martin Co.), 13 p. sec. 19 (1.7, 1.21, 1.22, 1.33)
- 473 High Temperature Coating for Expandable Structures, by D.M. Marco (Goodyear Aerospace Corp.), 24 p. sec. 20 (1.33, 2.8, 2.22, 2.34)
- 474 Microorganism Coating for Integral Fuel Tanks, by P. House (Air Force Materials Laboratory, U.S.A.F.), 10 p. sec. 21 (1.7, 1.8, 1.13, 1.21, 1.22)
- 475 Fuel Resistant Silicone Sealants and Adhesives for Supersonic Aircraft, by A.A. Miller and P. Lamont (Dow Corning Corp.), 22 p. sec. 22 (1.33, 2.2, 2.3, 2.21A, 2.24)
- 476 New Hydrofluorocarbon High Temperature Integral Fuel Tank Sealants, by W.F. Anspack, T.L. Graham, and R.G. Spain (Air Force Materials Laboratory - U.S.A.F.), 24 p. sec. 23 (1.9, 2.3, 2.22, 2.24, 2.33, 2.40)
- 477 Elastomeric Sealants for the Space Environment, by P.C. Crepeau and A.J. Tuckerman (Hughes Aircraft Corp.), 25 p. sec. 24 (1.8, 1.13, 1.21, 1.22, 1.33, 2.2, 2.8, 2.24)
- 478 Recent Developments in Using Elastomers for Static Cryogenic Sales, by P.R. Ludtke (National Bureau of Standards - U.S. Dept. of Commerce), 14 p. sec. 25 (1.7, 1.9)
- 479 An Evaluation of Inorganic Potting Compounds, by C.H. Vondracek (Westinghouse Research Labs), 20 p. sec. 26
- 480 Metal Clad Elastomeric Core Seals for Liquid Rocket Propellants, by D.F. Bazzare, R.G. Spain, and J.C. Withers (Air Force Materials Laboratory - U.S.A.F.), 17 p. sec. 27 (1.9, 1.33, 2.28)
- 481 Adhesives and GRP Honeycomb Sandwich -Centaur Insulation Panels, by B.E. Chitwood (General Dynamics -Fort Worth), 23 p. sec. 28 (1.8, 1.11, 1.22, 2.20, 2.21A, 2.22, 2.24, 2.28, 2.34)
- 482 Organic Materials in Hydrospace Applications, by Lester Morris (Products Research Co.), 10 p. sec. 29 (1.2, 1.7, 1.8, 1.33, 1.22, 2.1, 2.13)
- 483 High Temperature Insulation Coatings, by E.R. Harrel (Minnesota Mining and Mfg. Co.), 15 p. sec. 30 (1.9, 2.22, 2.40)
- 484 Seal Design for Space Station Usage, by J.C. George and B. Silverman (Lockheed-California Co.), 25 p. sec. 31 (1.7, 1.9, 1.15, 1.21, 1.22, 1.33)

Ref. No.

- 485 Unique Development of Sandwich Construction and Use of Sealants for
 Bonding to Structure, by R. E. Walter (McDonnell Aircraft Corp.),
 13 p. sec. 33 (1.8, 1.15)

Fourth International Reinforced Plastics Conference
November 25 - 27, 1964, London
The British Plastics Federation

Proceedings available from the British Plastics Federation
Reinforced Plastics Group, 47148 Piccadilly, London, W.1.

THE RESIN/GLASS INTERFACE

- 486 Studies of the Glass/Resin Interface, by W.C. Wake and R.H. Norman (Rubber and Plastics Research Association of Great Britain), 5 p. no.1 (1.17, 1.34)
- 487 Photoelastic Interfacial Investigations on Glass Fibre Reinforced Synthetic Resins, by A. Matting (Technical University, Hanover), 6 p. no.2
- 488 Chemical Finishing of Glass Fabrics - Their Uses and Properties, by J.S. Holt (Marglass Ltd.), 6 p. no.3 (1.8, 1.15, 2.6, 2.24, 2.28)

THE CHEMISTRY OF CURING

- 489 Some Factors Influencing the Gel and Cure Performance of Polyester Resins, by L. Chesner (Laporte Chemicals Ltd.), 6 p. no.4 (1.15, 2.21A, 2.24, 2.33)
- 490 Recent Developments and Special Systems of Organic Peroxide Catalysts for Unsaturated Polyester Resins, by W.H. Brinkman and K.R. Dines (Novadel Ltd.), 2 p. no.5 (1.15)

MATERIAL RESEARCH

- 491 Mechanism of Thermal Breakdown of Some Polyester Resin Systems and Related Model Compounds, by P.D. Ritchie (Royal College of Science and Technology, Glasgow), 5 p. no.6 (1.2, 1.15, 2.7)
- 491a Investigations of the Kinetics of Maleate-Fumarate Isomerization During the Polyesterification of Maleic Anhydride with Different Glycols, by I. Vansco Szmercsanyi, K. Maros and A.A. Zahran (Research Institute for the Plastics Industry, Budapest), 4 p. no.6a (1.15, 2.21A)
- 492 Some Studies of the Thermal Degradation of Polyester Resins, by R.J. Fort, W.R. Moore, and R.P. Sheldon (Bradford Institute of Technology), 6 p. no.7 (1.15, 2.12, 2.21A, 2.22)
- 493 Theories on the Elastic Behavior of Fibre-Plastics Material, by R.M. Ogorkiewicz and H. Ford (Imperial College of Science and Technology), 6 p. no.8

PROCESSING TECHNOLOGY

Ref. No.

- 494 The Processing of Glass Fibre Reinforced Acrylics, by H. Weisbart (Glaswerk Schuller, GmbH.), 7 p. no. 9 (1.2, 1.8, 1.15, 2.24, 2.28)
- 495 Automatic Deposition Moulding, by H. Starte (BTR Industries Ltd.), 6 p. no. 10 (1.15)
- 496 Inorganic Fibre Reinforced Thermoplastics, by G. L. Whicker (Turner Bros. Asbestos Co. Ltd.), 7 p. no. 11 (1.1, 1.2, 1.8, 1.11, 1.13, 1.14, 1.15, 1.17, 1.19, 1.20, 1.34, 2.24, 2.33, 2.36A, 2.42)
- 497 The Moulding of Dough Moulding Compounds, by J. Butler (British Industrial Plastics Ltd.), 8 p. no. 12 (1.15)
- 498 Crocidolite Asbestos as a Reinforcing Fibre in Synthetic Resins, by A. Bennett (Cape Insulation and Asbestos Products Ltd.), 4 p. no. 13 (1.3, 1.11, 1.15, 1.33, 2.6, 2.24, 2.28, 2.33)

FILAMENT WINDING

- 499 Filament Winding as an Engineering Concept, by R. J. Abelson (Shell Chemical Co., U.S.A.), 4 p. no. 14 (1.8, 1.11, 1.15, 2.33, 2.34)
- 500 Epoxy Resin Systems for Dry Filament Winding, by S. H. Christie (Shell Chemical Co., U.S.A.), 3 p. no. 15 (1.8, 2.24, 2.32, 2.33, 2.34)
- 501 Are Reinforced Plastics Structures Heading in the Right Direction?, by G. Jube (Sud-Aviation, Paris), 9 p. no. 16

BASIC STRUCTURAL DESIGN CONCEPTS

- 502 Composite Structures as High Strength, Light Weight Fillers, by M. W. Holloway and N. C. MacDonald (United Kingdom Atomic Energy Authority), 5 p. no. 17 (1.11, 1.21A, 2.22, 2.28)
- 503 Considerations of the Design and Construction of Larger Glass Fibre Reinforced Polyester Ships, by H. W. Wimmers (Chief Naval Constructor, Royal Netherlands Navy), 17 p. no. 18 (1.15, 1.34, 2.21A, 2.24, 2.33, 2.36)
- 504 The Practical Approach to Design and Construction of Marine Reinforced Plastics Structures, by T. Kirby (A. R. I. N. A. Royal Aircraft Establishment), 4 p. no. 20
- 505 The Effect of the Reinforcing Material on the Delamination of Glass Fibre Reinforced Polyester Laminates, by H. J. dePauw Gerlings (Holland), 5 p. no. 21 (1.15, 2.10, 2.24)

MARKETING

- 506 Marketing Reinforced Plastics, by H. V. Blake (BTR Industries Ltd.), 4 p. no. 22 (1.34)
- 507 The Market for Reinforced Plastics in the Electrical Industry, by J. Swainson (Permalit Ltd.), 9 p. no. 24 (1.8, 1.11, 1.15, 2.24, 2.33)

Ref. No.

PROPERTIES OF MATERIALS AND METHODS OF TEST "A"

- 508 Reinforced Plastics and Fire Protection in Buildings, by L. A. Ashton (D.S.I.R. and F.O.C. Joint Fire Research Organisation), 4 p. no. 25
- 509 The Use of Accelerated Weathering Methods in the Development of Reinforced Plastics Products for Outdoor Use, by W.H. Moss and A.B. Lang (Formica Ltd.), 6 p. no. 26 (1.11, 1.15, 2.6, 2.18, 2.23, 2.37)
- 510 The Weathering Behaviour of Reinforced Plastics Sheeting, by J.R. Crowder (D.S.I.R. Building Research Station), 8 p. no. 27 (1.15, 2.37)
- 511 Weathering Properties of Unsaturated Polyester Resins, by A. Whitehouse and D. Wildman (Scott Bader and Co. Ltd.), 8 p. no. 28 (1.15, 2.37, 2.39)

PROPERTIES OF MATERIALS AND METHODS OF TEST "B"

- 512 Electrical Resistivity Changes During the Cure of Epoxide and Polyester Resins, by N.C.W. Judd (Ministry of Aviation), 9 p. no. 29 (1.8, 1.15, 2.6, 2.13, 2.21A)
- 513 Variability in the Testing of Reinforced Plastics, by I.D. Aitken (Atomic Energy Research Establishment, Harwell), 5 p. no. 30
- 514 Non-destructive Testing of Glass Fibre Reinforced Plastics, by H. Haferkamp (Technical University, Hanover), 7 p. no. 31 (2.1)

END USES

- 515 A Helicopter Blade - A Composite Plastics Construction, by John R. Davis (Dama Plastics Inc., U.S.A.), 8 p. no. 32 (1.8, 2.24, 2.33)
- 516 The Use of Reinforced Plastics in the Italian Building Industry, by E. Rial (Vetreria Italiana Balzaretti Modigliani), 9 p. no. 33 (1.15, 1.22)
- 517 The Application of Reinforced Plastics in Spacecraft, by G. Lubin (Grumman Aircraft Corporation) and D.V. Rosato (Whittaker Corporation, U.S.A.) 16 p. no. 35 (1.2, 1.8, 1.9, 1.11, 1.13, 1.15, 1.18, 1.22, 1.33, 1.34, 2.22, 2.24, 2.28, 2.33, 2.34, 2.36A)

High - Polymer Physics
Division of High Polymer Physics of
The American Physical Society
March 23 - 26, 1964, Philadelphia

Selected Papers were published in the Journal of Applied Physics,
Volume 35, No. 11, November 1964. (Only those selected papers
were covered in this PLASTECH publication.)

Ref. No.

- 518 Nuclear Magnetic Resonance Studies of Molecular Motion in Some Elastomers, by W.P. Slichter and D.D. Davis (Bell Telephone Laboratories, Inc.), p.3103-3109 (1.7, 2.43)
- 519 NMR Observations of Drawn Polymers. IV. Molecular Orientation and Mobility in Drawn Polyethylene and Polyoxymethylene, by Heinz G. Olf and Anton Peterlin (Camille Dreyfus Laboratory Research Triangle Institute), p. 3108-3115 (1.1, 1.17, 2.20, 2.21A)
- 520 Habits of Polyethylene Crystals Grown From Paraffinic Solvents and From the Melt, by H.D. Keith (Bell Telephone Laboratories, Inc.), p. 3115-3127 (1.17)
- 521 Anisotropy of Oriented Polymers, by S.R. Kao and C.C. Hsiao (University of Minnesota), p. 3127-3133 (1.13, 1.15, 2.33, 2.34, 2.36)
- 522 Fracture of Amorphous Polymeric Solids: Time to Break, by A.C. Halpin (AF Materials Laboratory, Wright-Patterson AFB), p.3133-3142 (1.17A, 1.20, 2.27, 2.36)
- 523 Fracture of Amorphous Polymeric Solids: Reinforcement, by J.C. Halpin (Air Force Materials Laboratory, Wright-Patterson AFB) and F. Buecke (University of Dayton), p. 3142-3149 (1.17A, 1.20, 2.27, 2.36)
- 524 Polyisobutene Degradation in Laminar Flow: Composition and Shear Variables, by R.S. Porter and J.F. Johnson (California Research Corp.), p. 3149-3152 (1.7)
- 525 Fatigue Fracture in Fibrous Polymers as a Brittle, Crack-Nucleation Process, by Dusan Prevorsek and W. James Lyons (Textile Research Institute), p. 3152-3165 (1.2, 1.13, 1.17, 2.27, 2.30, 2.33)
- 526 Gas Transport in Thermally Conditioned Linear Polyethylene, by Alan S. Michaels, Harris J. Bixler and Harvey L. Fein (Massachusetts Institute of Technology), p. 3165-3178 (1.17, 2.8)
- 527 Non-Gaussian Behavior of Model Short-Chain Polymers, by Jack B. Carmichael (Dow Corning Corporation), p. 3178-3182 (1.17)
- 528 Scattering of Light by Gel Structures. I. Regenerated Cellulose, by E. Beebe and R.H. Marchessault (State University of New York), p. 3182-3188 (1.6, 2.37)
- 529 Relationship Between Morphology and Deformation Mechanisms of Polyolefins II, by K. Sassaguri (Asahi Chemical Co., Japan), R. Yamada (Nippon Rayon Co., Ltd., Japan) and R.S. Stein (University of Massachusetts), p. 3188-3194 (1.7, 2.37)

Ref. No.

- 530 Birefringence Effects in Acrylonitrile Polymers I. Effects at Different Temperatures, by R. D. Andrews and R. M. Kimmel (Massachusetts Institute of Technology), p. 3194-3203 (1. 2, 1. 34, 2. 20, 2. 21A, 2. 37)
- 531 Effects of Moisture and High Electric Fields on Conductivity in Alkali-Halide- Doped Cellulose Acetate, by R. E. Barker, Jr. and Charles R. Thomas (General Electric Company), p. 3203-3216 (1. 6, 2. 6, 2. 13)
- 532 Irradiation of Annealed Polyethylene Crystals, by R. Salovey and D. C. Bassett (Bell Telephone Laboratories, Inc.), p. 3216-3221 (1. 17)
- 533 Investigations of Polyethylene Single-Crystal Suspension by Light Scattering, by A. Peterlin and G. Meinel (Carille Dreyfus Laboratory, Research Triangle Institute), p. 3221-3228 (1. 7, 2. 21A, 2. 37)
- 534 Reduction of Dielectric Loss in Polyethylene, by Glenn E. Conklin (Bell Telephone Laboratories, Inc.), p. 3228-3235 (1. 17, 1. 34, 2. 18, 2. 37)
- 535 Dislocations in Polyethylene Single Crystals, by V. F. Holland (Chemstrand Research Center, Inc.), p. 3235-3241 (1. 17)
- 536 Isotactic Polybutene -1 Single Crystals: Morphology, by V. F. Holland and Robert L. Miller (Chemstrand Research Center, Inc.), p. 3241-3249 (1. 7)
- 537 Crystallization of Poly-(Tetramethyl-p-Selphenylene)-Siloxane Polymers, by J. H. Magill (Mellon Institute), p. 3249-3259 (1. 33)

Fifth Annual Structures and Materials Conference
April 1 - 3, 1964, Palm Springs
American Institute of Aeronautics and Astronautics

Proceedings available from American Institute of
Aeronautics and Astronautics
1290 Sixth Avenue, New York, New York, 10019

Ref. No.

- 538 Some Effects of the Space Environment of the Physical Integrity of
Plastics, by John A. Parker, Hermilo R. Gloria and Jerome J.
Lohr (NASA Ames Research Center), p. 58-64 (1.7, 1.8, 2.12)
- 539 Design of the Telstar Communication Satellite, by R. H. Shennum,
(Bell Telephone Laboratories), p. 139-145 (1.22, 2.13, 2.18)
- 540 Structural Evaluation of Damaged Filament-Wound Pressure Vessels,
by G. A. Lunde (Aerojet-General Corp.), p. 323-332 (2.24, 2.32)
- 541 A Lightweight Insulation System for Liquid Hydrogen Tanks of Boost
Vehicles, by Porter J. Perkins, Jr. and Jack B. Esgar (NASA
Lewis Research Center), p. 361-371 (1.15, 1.20, 1.22, 2.40)
- 542 Structural and Thermal Considerations of Ablative-Covered Non-
metallic Protective Shells, by Read Johnson, Jr. and Clifford
Y. Kam (Douglas Aircraft Co.), p. 380-385 (1.8, 1.11, 1.13,
2.29)
- 543 The Resistance of a Variety of Composite Space Structures To
Hypervelocity Impact, by James L. Summers and C. Robert Ny-
smith (NASA Ames Research Center), p. 386-393 (1.20, 1.22,
2.24, 2.31)

13 ABSTRACT The papers presented at technical conferences on plastic materials and related technology, within a one year period ending 5 March 1965 have been listed, indexed by subject, and compiled by material, type of technical data, and military application. Over 550 papers from 23 conferences have been covered. Included are a bibliography, author index, summary of new material developments, and a list of applications and programs sponsored by the Department of Defense and the National Aeronautics and Space Administration.

INSTRUCTIONS

1. ORIGINATING ACTIVITY: Enter the name and address of the contractor, subcontractor, grantee, Department of Defense activity or other organization (*corporate author*) issuing the report.

2a. REPORT SECURITY CLASSIFICATION: Enter the overall security classification of the report. Indicate whether "Restricted Data" is included. Marking is to be in accordance with appropriate security regulations.

2b. GROUP: Automatic downgrading is specified in DoD Directive 5200.10 and Armed Forces Industrial Manual. Enter the group number. Also, when applicable, show that optional markings have been used for Group 3 and Group 4 as authorized.

3. REPORT TITLE: Enter the complete report title in all capital letters. Titles in all cases should be unclassified. If a meaningful title cannot be selected without classification, show title classification in all capitals in parenthesis immediately following the title.

4. DESCRIPTIVE NOTES: If appropriate, enter the type of report, e.g., interim, progress, summary, annual, or final. Give the inclusive dates when a specific reporting period is covered.

5. AUTHOR(S): Enter the name(s) of author(s) as shown on or in the report. Enter last name, first name, middle initial. If military, show rank and branch of service. The name of the principal author is an absolute minimum requirement.

6. REPORT DATE: Enter the date of the report as day, month, year, or month, year. If more than one date appears on the report, use date of publication.

7a. TOTAL NUMBER OF PAGES: The total page count should follow normal pagination procedures, i.e., enter the number of pages containing information.

7b. NUMBER OF REFERENCES: Enter the total number of references cited in the report.

8a. CONTRACT OR GRANT NUMBER: If appropriate, enter the applicable number of the contract or grant under which the report was written.

8b, 8c, & 8d. PROJECT NUMBER: Enter the appropriate military department identification, such as project number, subproject number, system numbers, task number, etc.

9a. ORIGINATOR'S REPORT NUMBER(S): Enter the official report number by which the document will be identified and controlled by the originating activity. This number must be unique to this report.

9b. OTHER REPORT NUMBER(S): If the report has been assigned any other report numbers (*either by the originator or by the sponsor*), also enter this number(s).

10. AVAILABILITY/LIMITATION NOTICES: Enter any limitations on further dissemination of the report, other than those imposed by security classification, using standard statements such as:

- (1) "Qualified requesters may obtain copies of this report from DDC."
- (2) "Foreign announcement and dissemination of this report by DDC is not authorized."
- (3) "U. S. Government agencies may obtain copies of this report directly from DDC. Other qualified DDC users shall request through _____."
- (4) "U. S. military agencies may obtain copies of this report directly from DDC. Other qualified users shall request through _____."
- (5) "All distribution of this report is controlled. Qualified DDC users shall request through _____."

If the report has been furnished to the Office of Technical Services, Department of Commerce, for sale to the public, indicate this fact and enter the price, if known.

11. SUPPLEMENTARY NOTES: Use for additional explanatory notes.

12. SPONSORING MILITARY ACTIVITY: Enter the name of the departmental project office or laboratory sponsoring (paying for) the research and development. Include address.

13. ABSTRACT: Enter an abstract giving a brief and factual summary of the document indicative of the report, even though it may also appear elsewhere in the body of the technical report. If additional space is required, a continuation sheet shall be attached.

It is highly desirable that the abstract of classified reports be unclassified. Each paragraph of the abstract shall end with an indication of the military security classification of the information in the paragraph, represented as (TS), (S), (C), or (U).

There is no limitation on the length of the abstract. However, the suggested length is from 150 to 225 words.

14. KEY WORDS: Key words are technically meaningful terms or short phrases that characterize a report and may be used as index entries for cataloging the report. Key words must be selected so that no security classification is required. Identifiers, such as equipment model designation, trade name, military project code name, geographic location, may be used as key words but will be followed by an indication of technical context. The assignment of links, rules, and weights is optional.
