INTRODUCTION

Under contract number DA 49-092-ARO-33, The Army Research Office, Arlington, Virginia sponsored Texas Instruments Incorporated to perform an Inventory of Geographic Research of the Humid Tropic Environment for the U.S. Army Natick Laboratories, Natick, Massachusetts. In order to perform the subject inventory it was necessary to examine the humid tropic environmental literature to determine past research as an indication of the current status of knowledge of the topic and to compile the results of this bibliographic search.

The bibliography was collected at major domestic and foreign depositories and compiled at Dallas, Texas by TI staff and was originally intended for internal use via our APT-04 storage and retrieval system. It became apparent that the literature compiled should be available to the sponsor's agencies and the scientific community. The format selected for this task was the KWIC Index.

The KWIC Index was initially conceived as a mechanized method of selecting words from document titles which characterize the information therein and arranging them alphabetically according to their occurrence.[1] The KWIC Index consisted of a publication containing a standard bibliography listing authors, title and source of document, and a key-word-in-context section (KWIC). The KWIC section was designed for rapid visual scan and for quickly conveying the contents of the document being indexed. As the KWIC section gives only a rough idea of what the document involved is about, the Bibliography section was suggested as the full reference medium. The sections were linked by means of a cross-reference code permitting the user to refer to the bibliography after finding some item of interest in the KWIC section.[2]

The KWIC section itself is a listing of title extractions. An extraction is made from the title in such a way that one of the key words in the title is highlighted. This key word appears roughly in the middle of the extraction and is thus surrounded by other words to heighten its meaning. An extraction is made for each key word in the title; common words such as prepositions not being considered. Thus, one title will be referenced in a KWIC Index as many times as there are keywords in it. The extractions are listed in alphabetical order by key word for rapid access to a particular word. Such an index appears more useful than a traditional subject index in that the meaning or use of a word can better be inferred by scanning the surrounding words. Such an index can also be rapidly prepared by data processing equipment.[3]

---

[3] General Information Manual KWIC, Key Word in Context, IBM Corporation, New York, E20-8091, 21 p.

In the six years since it was introduced, the popularity and widespread use of KWIC indexes brought about numerous modifications to the KWIC system and vice versa. Development of a personal author listing and its cross-reference code linked to the KWIC and bibliography sections was an early addition.

Another early modification was the so-called "wrap-around" feature. Without wrap-around, a title extraction might be viewed as made by passing the title across a fixed window slot. As keywords passed a certain point, an extraction was made. Near the end of the title, only the last few words appear in the extraction. The wrap-around feature might be viewed as wrapping the title around a wheel so that the end touches the beginning. When the wheel is rotated past the slot, the end of the title appears in an extraction, followed immediately by the beginning and vice versa.

Other modifications concern the cross-reference code. The code system used in the present index is unique and was developed expressly for this program. Code numbers and letters have been assigned to documents on a regional, subject and author basis and are not individually unique for different documents concerning identical areas, topics and authors.

Description of the KWIC Index

The KWIC Index-Humid Tropic Environmental Literature consists of the following five sections.

Section A - Frequency of Stop Words

The KWIC program is designed to "index" all words appearing in the title, unless specifically rejected. Common or non-significant words, such as articles, pronouns, conjunctions, etc., together with other non-descriptive or duplicative terms, are eliminated by a "STOP WORD" deck, consisting of key-punched cards containing these words. These "STOP WORDS" are prevented from being listed in the Key-Word portion of the index (Section D). The "STOP WORDS" and their frequency of prevention from occurrence are presented in Section A as a guide of those terms not indexed and therefore not to be used in searching the key-word section.

Section B - Frequency of OK Words

The listing of all "OK" words or key words and their frequency are those terms listed in Section D of this report as they had passed the "STOP WORD" screening. This list may be considered as an index to the KWIC proper.

Section C - Author Listing and Index

The author listing and index is arranged alphabetically and contains separate entries for personal or corporate and individual or multiple authors. The author's name is followed by the code number(s) of the documents he authored. As no more than 18 characters are available for each entry, the author listing has required considerable use of abbreviations in corporate authors and occasional "chopping" of personal authors with "long names."

Authors will be found under the prefix when their last name is preceded by standard prefixes such as DE, DEL, LA, ST, VAN, VON, etc. Authors may be listed with their given names in full or with one or more of their given names shortened to initials. This, plus the fact that authors whose names are followed by suffixes, such as JR, SR, II and III, sometimes print out with the suffix dropped, means that occasionally several listings for the same author may become slightly separated.

No indication is given as to whether an individual is sole author or one of several authors. Reference should be made to the bibliography (Section E) for this information.

Section D - Key Word Listing and Index

The key word listing and index is an alphabetic arrangement of the rotated or permuted document titles in "wrap-around" form and code number for cross-reference to Section E. In addition to the key-word, each line of entry contains the remainder of the title up to a total of sixty characters and spaces. This total amount of characters and spaces may, at times, include the entire title. A "number" sign (#) appears at the end of each title.

An effective way of using the index is to scan vertically the alphabetical keyword list, pausing at words of interest to examine the horizontal context. Where interest is thereby confirmed or additional information required, the cross-reference code number at the right hand side of the entry is noted and referred to in Section E (Bibliographic Listing and Index). Users should note that the inclusion of an occasional unsuitable indexing word is inevitable. Such entries cause no difficulty in the use of the index.

The key word entry is derived from the document title. The document is the title of the article, book chapter, report, volume, etc. Many of the documents are in foreign languages and the user is cautioned to refer to foreign-language key words when applicable. For example, after searching "Rainforest," then search "Regenwald," etc.

Section E - Bibliographic Listing and Index

The bibliography consists of all references listed numerically and alphabetically according to the cross-reference code number. The code "number" is a thirteen-column combination which consists of four numerals, a hyphen, three numerals, a hyphen, and four letters. The first four numerals represent a regional code number. A key to these numbers may be found on the left-hand inside covers. The first three digits refer to a particular country or region, while the fourth digit refers to the corresponding continent. The order of the key is identical to the order of the listing. For user ease, separator lines are provided in Section E.

The middle three digits of the cross-reference code consist of a subject code, whose key may be found on the right hand inside covers. Within each country, region or continent enumerated by the first four digits of the code, the user will find the references in the same subject code order as indicated in the key.

The last four columns of the code number are derived from the first four letters of the last name of the author of the reference.

This code number system permits not only cross reference between KWIC Index Sections but use of Section E as an independent bibliography which is arranged in geographic, subject and author order.

The references contain standard information similar to that found on a library catalog card: Author(s), Title, Originating agency, Report number, Date of publication, Place of publication and Pages. Abstracts are provided for approximately 10 percent of the documents. Documents of note, due to their military significance or scientific value, are indicated by an asterisk which precedes the code number.

The following KWIC Index contains 14,515 documents, 9,170 authors and 58,830 key words derived from a widely dispersed literature found in many languages and from a wide range of technical disciplines. Obviously, while the bibliography is comprehensive, no claim toward completeness is made. Further searching, screening and evaluation are required. This KWIC Index has been carefully compiled and edited, but because many sources of literature were used in compiling the KWIC Index, it is likely that some transcription errors may appear. Foreign literature is included without such punctuation as accents, cedillas, umlauts, etc.

Texas Instruments believes that the Index will be of value to earth and environmental scientists concerned with the Humid Tropics. It should provide them with a ready reference to the basic literature and its authors.
