INTRODUCTION

This six volume report contains oceanographic data collected by the University of Washington Department of Oceanography and other agencies during the months of January to June 1963. Two principal ships were used, the Research Vessel Brown Bear of the University of Washington and the Canadian Naval Auxiliary Vessel Oshawa. The cruises aboard the Oshawa were joint investigations by the Pacific Naval Laboratory (P.N.L.), Pacific Oceanographic Group (P.O.G.), and University of Washington (U.W.). In addition, biological data collected during one cruise of the Research Vessel Acona and aboard the chartered fishing vessel Betty A are included. A University of Washington staff member took part in the Acona Cruise in cooperation with Oregon State University. The numbers and dates of these cruises and the volume in which the data will be found are as follows:

<u>Cruise No.</u>	<u>Dates, 1963</u>	<u>Volume Containing Data</u>
<u>Acona 6301-E*</u>	24-25 January	I
<u>Brown Bear 318</u>	27 February - 20 March	I
<u>Oshawa-1 (OS1)</u>	12-26 March	II
<u>Brown Bear 320</u>	28 March - 10 April	II
<u>Brown Bear 322</u>	16 April - 1 May	III
<u>Betty A-1 (BA1)</u>	9-11 May	III
<u>Brown Bear 323</u>	13-19 May	III
<u>Brown Bear 324</u>	21 May - 4 June	IV
<u>Oshawa-2 (OS2)</u>	22 May - 12 June	V
<u>Brown Bear 326</u>	13-23 June	VI
<u>Oshawa-3 (OS3)</u>	17-30 June	VI
<u>Brown Bear 327</u>	24 June - 1 July	V

* Biological data only

These cruises are part of a continuing series designed to provide data for a year-round study of the water characteristics along the Washington-Oregon coast with special emphasis on the fresh water entering the system from the Columbia River. The objectives of this study are to determine the gross features of the movement and dispersion of Columbia River effluent water in the open sea off the mouth of the river and along the adjacent coast, and ultimately to ascertain the probable fate of any radioactive material that might be associated with the effluent or with river-borne materials. Funds for this investigation are being provided by the United States Atomic Energy Commission under Contract No. AT(45-1)-1725 and by the United States Office of Naval Research Contracts Nonr-477(10) and Nonr-477(37), Project NR 083 012.

Cruise Operations and Objectives

Most of the cruises presented herein were routine cruises for the purpose of obtaining physical, chemical, and productivity data and

phytoplankton samples during various seasons of the year. These cruises were Brown Bear 318, Oshawa-1, Brown Bear 320, 322, 323, 324, Oshawa-2, and Oshawa-3. Zooplankton samples were also collected on all the Brown Bear cruises listed above. Cruise 326 was primarily for the instruction of students enrolled in a summer session course entitled "Field Experience in Oceanography." Routine physical-chemical measurements were made, with emphasis on certain submarine canyons. Other activities included productivity measurements, bottom sampling in Willapa Canyon, and a comparison of various methods of collecting biological samples. Cruise 327 was primarily a reconnaissance of certain features of Cobb Seamount. The work included current measurements with Richardson meters, bathymetric surveys using a Precision Depth Recorder, and tests of the holding power of various anchors. However, a few oceanographic stations were occupied enroute to and at the seamount. Participation in Acona Cruise 6301-E was for the purpose of obtaining phytoplankton data during the winter at a time when the Brown Bear was undergoing repairs. The Betty A Cruise was made to insure continuity of observations of phytoplankton productivity during the expected period of the important spring bloom along the Washington coast. A fishing vessel was chartered to fill an unavoidable gap of several days between consecutive cruises of the Brown Bear. The cruise tracks and station locations for each cruise are shown in the appropriate volume. It should be noted that each of the three Oshawa cruises was concurrent with one or more Brown Bear cruises. The tracks of these concurrent cruises were planned to give maximum synoptic coverage of the study area.

Types of Observations

Temperature, salinity, and dissolved oxygen were determined at all oceanographic stations. At selected stations additional water samples were drawn for "extra chemistry" analyses; namely, phosphate, silicate, and nitrate. In most cases these extra chemistry samples were frozen aboard ship and returned to Seattle for analysis ashore. Samples for productivity and chlorophyll measurements and for phytoplankton light saturation experiments were obtained at certain of the oceanographic stations. Submarine irradiance data were collected once a day. On most cruises a 12-inch (30.5 cm) Secchi disc was lowered at daylight stations where productivity measurements were made, and continuous recordings of solar radiation were made.

In addition to the above mentioned data which are tabulated in this report, several other types of collections and observations were made on some or all cruises. Zooplankton samples were collected from horizontal tows in the upper 200 meters using Clarke-Bumpus samplers. The ship's times of the tows and depths sampled are listed in the Biological Data tables. Phytoplankton samples were collected from the Van Dorn samplers at noon stations and preserved for future counting and identification. Samples for phytoplankton fractionation experiments were taken from the surface water noon stations. A few zooplankton and water samples were collected on behalf of the Laboratory of Radiation Biology, University of Washington. A description of their investigations and a discussion of the results has been given by Seymour and Lewis (1964).

On Brown Bear cruises the salinity-temperature deviation recorder provided a continuous record of the deviations of temperature and salinity of the near-surface water (approximately 8 feet depth) from pre-selected base values. Mechanical bathythermograph lowerings were made at all stations on most cruises. On Cruises 318, 323, and 327 the electronic bathythermometer was used instead at some stations. Samples for ammonia analysis were collected on Cruises 318, 323, and 324. A few bottom samples were collected with Van Veen on Shipek samplers on Cruises 322, 323, 324, and 326. Also on Cruise 326 there were inductive salinometer lowerings and hydrophotometer measurements and bottom sampling by means of piston corer and dredge.

On 26 May 1963 a rendezvous of the three research vessels, Oshawa, Brown Bear, and Acona of Oregon State University was held at a location some 120 miles off the Oregon coast. A comparison oceanographic station was made, with a simultaneous messenger release on all three vessels. Data from the Brown Bear and Oshawa stations are included in this report, being stations 324-37 and OS2-23, respectively.

Preliminary reports describing the work performed have been issued for all cruises except 327. (Sanger, 1964a; Love and Sanger, 1963a; Morse, 1964; Stevens and Sanger, 1964; Dawson, 1964; Sanger, 1964b; Love and Sanger, 1963b; Stevens, 1963; Morse and Sanger, 1964; Collias, 1964; Love, 1963). The physical oceanography of the area has been discussed by Budinger, Coachman, and Barnes (1964). Selected aspects of phytoplankton distribution and production have been treated by Anderson (1963).

Collection of Samples

Nansen bottles were used to obtain the water samples for salinity, oxygen, and extra chemistry analysis except as noted below. Chlorophyll and productivity samples were collected with modified Van Dorn plastic samplers (Van Dorn, 1957). Some samples for salinity and extra chemistry analysis were also drawn from the Van Dorn samplers. These results appear in the Biological Data section.

The four uppermost depths for chlorophyll and productivity samples corresponded to 100, 50, 10 and 1 per cent of the surface illumination. These depths were usually determined by use of a submarine irradiance meter which provides a reading of the ambient underwater light relative to the surface light. In a few cases the sampling depths were computed from extinction coefficients as obtained from secchi-disc measurements. (Poole and Atkins, 1929)

Determination of Properties and Accuracy of Measurements

Two protected reversing thermometers were used on each Nansen bottle. In addition, all or most of the bottles below approximately 200 meters carried an unprotected thermometer. The temperatures shown are, in most cases, the average of two protected thermometer readings after application of the usual expansion and index corrections.

The depths of subsurface observations were calculated from measured wire angles; from readings of unprotected reversing thermometers; and from smoothed curves of wire length minus thermometric depth (L-Z) versus wire length (L), the difference method described by La Fond (1951).

The salinity determinations were run with the University of Washington salinometer (Paquette, 1958). The majority of the salinity samples were run aboard ship, but those from Cruises Oshawa-1 and Brown Bear 327 were analyzed ashore. On Cruises 318 and 322 some samples were analyzed aboard ship and the remainder ashore. The values obtained have a reproducibility of ± 0.004 ‰ salinity at the 95 per cent probability level and a probable accuracy of ± 0.01 ‰ salinity or better at the same level of probability.

It may be noticed that on some stations the salinity values obtained from Van Dorn casts, which are tabulated in the Biological Data sections, do not agree with, nor fit on a smooth curve with, the Nansen bottle salinities, although in some cases both were run on the same salinometer by the same operator at approximately the same time. Some reasons for these discrepancies can be suggested as follows: a) the casts were taken at different times. b) Even if the tabulated depths are the same to the nearest meter, the samples were not taken from exactly the same depth. At a station with a sharp vertical salinity gradient this difference in depth would be an important factor. Also, the methods used to determine the depths of the two types of samples may not have been the same. c) The geographical positions of the two casts were not identical due to ship's drift. d) The persons collecting the two types of samples did not use the same technique for rinsing the sample bottles. e) The Van Dorn samplers were not adequately flushed because they were used at relatively shallow depths and were tripped without allowing enough "soaking" time.

Dissolved oxygen was measured by the modified Winkler method described by Thompson and Robinson (1939). All the oxygen analyses were run aboard ship.

Phosphate values were obtained by the method of Wooster and Rakestraw (1951), except that the color intensities were measured with a Beckman spectrophotometer Model DU, and a constant temperature bath set at 27° Celsius was used to bring all samples and standards to the same temperature. Most of the phosphate values tabulated are from frozen samples analyzed at a later date ashore, but a few are the result of shipboard analysis of unfrozen samples. The following table shows the type of phosphate data tabulated for each cruise:

Cruise	Frozen samples analyzed at a later date ashore	Unfrozen samples analyzed aboard ship
<u>Acona</u> 6301-E	All data	
<u>Brown Bear</u> 318	All data	
<u>Oshawa-1</u>		No phosphate data
<u>Brown Bear</u> 320		No phosphate data
<u>Brown Bear</u> 322	All data	
<u>Betty A-1</u>		No phosphate data
<u>Brown Bear</u> 323	All data	
<u>Brown Bear</u> 324	All data	
<u>Oshawa-2</u>	All data	
<u>Brown Bear</u> 326	Stations 24, 27, 30, 37, 43, 45, 50, 54, 55, 56, 57, 58 and 60	All remaining data
<u>Oshawa-3</u>	All data	
<u>Brown Bear</u> 327		All data

Silicate values were obtained by the molybdenum blue method of Mullin and Riley (1955a), except that sodium silicofluoride was used to prepare the standard solutions. All silicate determinations are from frozen samples analyzed ashore.

Nitrate values were obtained using the method of Mullin and Riley (1955b) with a few minor changes in the procedure for the addition of reagents. All nitrate determinations are from frozen samples analyzed ashore.

The chlorophyll samples were analyzed according to the method of Richards with Thompson (1952) as modified for use with the Millipore® filter (Creitz and Richards, 1955). A turbidity correction was made by subtracting the extinction at 7500Å from spectrophotometer readings at other wave lengths (Strickland and Parsons, 1960). The error in the technique is reported to be about ±5%. A computer was used to process the data.

The radiocarbon method was used for productivity measurements (Steemann Nielsen, 1952). The error in the method is about ±10% (Strickland and Parsons, *loc. cit.*). Approximately 2.5 microcuries of radioactive carbonate $C^{14}O_3$ were added to sea water samples in 125 ml

® Registered trademark, Millipore Filter Corp., Bedford, Massachusetts.

light and dark pyrex reagent bottles. Incubator measurements were made under constant illumination of about 9150 lux using a bank of "Cool-White" fluorescent lights. Temperature was controlled with running surface sea water. After three to six hours of incubation, the samples were filtered on PH Millipore filters ($0.3 \pm 0.02\mu$) and stored over silica gel. Simulated in situ measurements were generally made twice daily, at dawn and at noon. Samples were incubated in a topside deck incubator exposed to full sunlight illumination. Kodak Wratten neutral density filters were used to simulate conditions of 50, 10, and 1 per cent surface illumination. Temperature was controlled by running surface sea water. Periods of incubation were either from sunrise to noon, or noon to sunset. Usually only a surface sample was incubated during the sunrise to noon period.

In the laboratory, the filters retaining the C^{14} were fumed with concentrated HCl for 10-15 minutes to remove traces of inorganic C^{14} . Geiger counting equipment consisted of a Nuclear-Chicago Model D-47 gas flow counter with micromil window, 161-A scaler, C-110 automatic sample changer, and C-111B printing timer. Each sample was counted until a minimum number of 1280 total counts was obtained. Computer processing of the data included corrections for background, dark bottle uptake, variations in inorganic carbon content of sea water, coincidences and isotope effect (5%).

Light saturation experiments were conducted as follows:

At each noon station, primary productivity samples from one of the routine productivity sampling depths were incubated at different light intensities to determine the light saturated rate of photosynthesis of the phytoplankton community. The intersect of extrapolations from the initial linear and light saturated region of the resultant curve of photosynthesis vs. light intensity is used to express the onset of light saturation (Talling 1957). The four routine sampling depths were rotated so that each depth was selected every four days of operation.

Samples were enclosed in 60-ml pyrex reagent bottles (6 light and 2 dark), inoculated with C^{14} in the usual manner and placed in an incubator with running surface sea water for temperature control. Each of five light bottles was covered with a neutral filter of different density to vary the fraction of light received by the phytoplankton. The sixth light bottle was exposed to full illumination of about 21,500 lux. Illumination was provided by a bank of high output "Cool-White" fluorescent tubes. Intensity was measured at the beginning and end of the experiment with a Weston sunlight illumination meter. The actual total light intensity for each experiment is listed in the Biological Data section. Samples were incubated for at least two hours before filtration. Subsequent procedure was the same as for routine productivity samples.

Irradiance measurements were made with a Marine Advisers, Incorporated, Model C-1a irradiance meter. A brief description of the instrument and its use has been given by Love and Sanger (1963a).

The following quantities were computed with the IBM 7094 Data Processing System at the Research Computer Laboratory of the University of Washington: σ_t , apparent oxygen utilization (AOU), and oxygen saturation for observed values; the interpolated values of temperature, salinity, and oxygen at standard oceanographic depths; the interpolation error for each of the above quantities; σ_t for interpolated values; specific volume anomaly ($10^5 \delta$), potential energy anomaly, geopotential anomaly ($\Sigma \Delta D$), and variance ratio. Programs developed at the Department of Oceanography were used. Oxygen solubility is calculated according to the equations of Truesdale and Gameson (1957). The interpolation program is based on two three point Lagrange parabolic interpolation polynomials (Buckingham, 1957). This interpolation scheme yields two estimates of the interpolated value of a property at each standard depth. The first polynomial makes use of two observed values from depths above the desired standard depth and one value from a depth below; the second polynomial uses one value above and two below. The resultant interpolated value is the numerical average of the two estimates. The error of interpolation is equal to the difference in magnitude between the two Lagrange interpolation polynomials times a factor depending on the third derivatives. This factor is given the value 0.33 in this computer program. The derivation of this error term is given by Buckingham (1957). A discussion of this system of interpolation and error determination and a derivation of the value 0.33 for the factor is given by Rattray (1962). The equations for σ_t are taken from LaFond (1951), and the equations for specific volume anomaly and geopotential anomaly are those used by the U.S. Navy Hydrographic Office in their computer program (U.S. Navy Hydrographic Office, 1955b) except that the pressure in decibars is used instead of the depth. The equations for pressure and potential energy anomaly are taken from Froese (1960). In general, observed values marked as questionable (see page 8) are not used for interpolation.

The variance ratio is the ratio of the variance of the interpolation polynomial to the variance of the measurement. The magnitude of this ratio gives an indication of whether the vertical spacing of observed values is adequate to accurately portray the distribution of properties in that region of the curve. As shown by Rattray (1962) the value should remain close to unity. The two quantities, variance ratio and error of interpolation, can be taken as joint indications of the accuracy of the interpolated values. A large variance ratio indicates inadequate vertical spacing of observed values, but if the vertical gradient of properties is small in this region of the curve the error of interpolation will still be small. On the other hand a small variance ratio may be accompanied by large errors of interpolation in regions of steep vertical gradients, such as the thermocline or halocline. Large values of the variance ratio which may occur at the final interpolated depth reflect a necessary change in the interpolation scheme at that depth when there is only one observed value below the desired standard depth.

The geographical positions are based on navigational fixes obtained by the watch officers of the Brown Bear and the Oshawa. Aboard

the Brown Bear, at locations within 18 nautical miles of shore the fix was usually obtained from radar ranges and bearings; beyond that distance loran was used. In the area in which these cruises operated, the error of loran fixes is considered not to exceed one mile. Aboard the Brown Bear a fix was obtained immediately upon arrival on station in most cases, and another fix obtained prior to departure from station. Occasionally one or more fixes were also obtained at intermediate times while on station. The positions reported herein for all Brown Bear cruises except 327 are usually "mean" positions, determined graphically, lying between the arrival and departure fixes, and taking into account any intermediate fixes obtained. For Cruise 327 the arrival fixes are reported.

Oshawa positions were obtained by loran in most cases. An arrival and departure fix were taken and the mean of the two positions reported as the station position. When possible the loran fixes were checked by celestial observations.

Aboard the Betty A the positions of stations 1, 3, and 4 were obtained by loran; the position of station 2 was obtained by dead reckoning.

Miscellaneous Comments

Acona cruise numbers are prefixed with "AC", Betty-A numbers with "BA". All others are prefixed with the full name of the vessel. By the use of this system, each station of each cruise is uniquely identified. In most cases the "productivity only" stations mentioned previously have been designated by a number and a letter, such as 16A, 28A, etc. In addition, stations in inshore waters or ocean stations located close to the coast are further identified by naming them for a coastal landmark in that vicinity. Prominent landmarks such as headlands, islands, harbor entrances, or towns were used whenever possible, but on some stretches of the coast there are no such prominent landmarks. In these cases other features such as the mouths of small rivers, villages, nearby mountain peaks, or lakes located immediately behind the beach were used.

Oshawa stations in this series of cruises have similar designations; "CNAV OSHAWA ^^ CRUISE 001 ^^ STATION 001" represents the first station of the first joint P.N.L.-P.O.G.-U.W. cruise, etc.

The data tables contain a few apparently anomalous values of various properties which do not fit on a smooth curve of the particular property versus depth. These questionable values are marked with an asterisk (*). They have been checked to the extent that existing original data sheets, work sheets, and other information will allow and cannot be proved incorrect.

Occasionally an obviously incorrect machine-interpolated value was noted when checking the data and was replaced by a hand-interpolated value. Such hand-interpolated values are marked in the tables by a record mark (†).

Personnel

At Sea: The following persons were members of the scientific staff on the cruises indicated. Personnel from the Department of Oceanography are identified by their job title, those from other organizations by the name of the organization. (L) indicates Cruise Leader; (S) indicates Senior Scientist.

<u>Name</u>	<u>Title or Organization</u>	<u>Cruise No.</u>
Anderson, Dr. George C.	Research Assistant Professor	OS1, OS2(L)
Andrews, John E.	Marine Aide	322, 323, 324
Andrews, Robert S.	Research Assistant	326
Angell, Charles	Marine Technician	OS1, 323
Armand, Donald J.	Marine Technician	318, 320, 322, 323, 324, 327
Baker, James V.	Marine Technician	320, 322
Baldwin, John	LT, U.S. Navy; student	326
Bauer, Laurence	Marine Technician	OS1, 322, OS2
Beck, John R.	Senior Marine Aide	326
Becker, James F.	Cartographer	322
Best, M.	Pacific Oceanographic Group	OS2
Boon, John D.	Student Helper	326
Cline, Joel D.	Research Assistant	326
Collias, Eugene E.	Senior Oceanographer	326 (L)
Cooney, Robert T.	Teaching Assistant	326

Ashore: The following persons, as well as a number of the sea-going personnel, were engaged in the analysis and preparation of these data for publication:

<u>Name</u>	<u>Title</u>
Adams, Donald D.	Research Assistant
Becker, James F.	Assistant Cartographer
Blackburn, Gene T.	Marine Technician
Buck, Dale R.	Marine Aide
Budinger, Thomas F.	Senior Oceanographer
Cromoga, Richard	Cartographer
Doyle, Donald R.	Senior Cartographer
Edenso, Jim	Tab Machine Operator
Fritz, James E.	Senior Marine Aide
Grant, Ronald L.	Marine Technician
Green, Linda S.	Programmer
Harris, John A.	Senior Marine Aide
Hoverson, Sigmund J.	Marine Technician
Hulbert, David W.	Marine Technician
Johnston, Allan H.	Senior Marine Aide
Larson, Harold	Assistant Cartographer
Lesh, Michael	Marine Technician
Long, Linda K.	Laboratory Technician
Meller, Meredythe	Laboratory Technician
Morse, Betty-Ann	Oceanographer
Nutt, Mary	Marine Aide
Rautenberg, Carol	Office Assistant
Riley, Ralph W.	Marine Chemist
Rolland, John O.	Marine Technician
Rona, Monique	Senior Programmer
Von Gal, Edwyna	Laboratory Technician
Walker, William R.	Programmer
Wallin, Marsha M.	Programmer

EXPLANATION OF DATA TABLES

The information in the data tables was transcribed directly from IBM cards using an IBM 1401 Data Processing System. A blank space in the tables or headings indicates that no observation was taken. The original data and the interpolated and computed values punched on the cards are in most cases recorded or coded in accordance with the procedures used by the National Oceanographic Data Center; however, some weather information is coded with U.S. Navy Hydrographic Office codes. The codes used to describe weather and sea conditions, etc., will be found in NODC Publication M-2 (National Oceanographic Data Center, 1964) or in H.O. Publication No. 606-c (U.S. Navy Hydrographic Office, 1956) and H.O. Publication No. 607 (U.S. Navy Hydrographic Office, 1955a). Some changes were made in the card format but these do not affect the arrangement of the data in this report. Abbreviations and column headings are described below and, where necessary, the NODC or Hydrographic Office numerical codes have been reproduced to aid in interpreting the data.

Abbreviations and Headings Used in Data Tables

DATE	For Observed Values the date given is Greenwich day/month/year. For Biological Data the date given is local (ship's time, +8 zone) day/month/year.
HR (Hour)	Greenwich mean time to the nearest tenth of an hour of the messenger drop on the first cast.
LAT (Latitude and LONG (Longitude)	In degrees and minutes; or in degrees, minutes, and tenths of minutes on some stations.
SNDG (Depth of water)	Depth of water in meters at the station as determined by the ship's echo sounder. This depth was generally recorded immediately after the ship arrived on station.
WEA (Weather)	State of the weather. One of two possible codes was used for reporting present weather. A two-digit number in this space indicates use of WMO Code 4677, shown on page 20; one number preceded by an X indicates use of WMO Code 4501, shown on page 22. The X has no significance except to indicate which code was used.
WIND VEL. DIR (Wind velocity and direction)	Wind velocity in knots. Wind direction, see code, page 18.

BAROM (Barometric pressure)	To obtain the barometric pressure in millibars, add 900 if this number is above 50; add 1000 if below 50.
TEMP DRY <u> </u> WET <u> </u> (Air temperature, dry, wet bulb)	In degrees Celsius.
RELHU (Relative Humidity)	Expressed in per cent.
WTRCLR (Water color)	Expressed according to the Forel-Ule scale. See code, page 21.
SECDI (Water transparency)	Depth in meters to which a 12-inch (30.5 cm) Secchi disk could be seen on daylight stations.
SEA <u> </u> DIR <u> </u> (Sea state and direction)	State of the sea, see code, page 19. Direction from which sea was coming, see code, page 18.
SWELL <u> </u> DIR <u> </u> (Swell amount and direction)	Height and wave length of swell, see code, page 19. Direction from which swell was coming, see code, page 18.
DOM WAVE DIR <u> </u> HT <u> </u> PER <u> </u> (Dominant wave direction, height, and period)	Dominant wave characteristics (National Oceanographic Data Center, 1964) were reported on some cruises instead of sea and swell. Direction from which waves were coming, see code, page 18. Height of waves, see code, page 21. Period of waves, see code, page 22.
CLOUD TYPE <u> </u> AMT <u> </u> (Cloud type and amount)	Cloud type, see code, page 17. Amount of cloud cover, see code, page 18.
VIS (Visibility)	Range of visibility. See code, page 18.
WIRE ANGLE(S)	In degrees. Wire angles are tabulated only for those casts whose numbers appear in the "Cast" column at the left of the page, i.e., casts from which data were obtained. The first number is the wire angle for Cast 1, or the lowest numbered cast appearing, the second for Cast 2, etc. Dashes (- -) indicate the wire angle was not recorded for that cast.
CST (Cast)	Cast number.
DEPTH	Depth in meters from which sample was obtained.

TEMP (Temperature)	In degrees Celsius.
SAL (Salinity)	In parts per thousand ($^{\circ}/_{\infty}$).
SIGMA-T (σ_t)	An expression for the density of sea water at atmospheric pressure, having the indicated temperature and salinity. To convert sigma-t values to density, divide by 1000 and add 1; thus sigma-t 22.42 = density 1.02242.
OXYGEN (Dissolved Oxygen)	
ML/L	In milliliters per liter.
MGA/L	In milligram-atoms per liter.
AOU (Apparent oxygen utilization)	In milligram-atoms per liter.
SATN (Saturation)	Per cent of oxygen saturation.
PHOS (Phosphate-phosphorus)	In microgram-atoms per liter ($\mu\text{g-at/l}$)
NITR (Nitrate-nitrogen)	In microgram-atoms per liter ($\mu\text{g-at/l}$)
SIL (Silicate-silicon)	In microgram-atoms per liter ($\mu\text{g-at/l}$)
CHL-A (Chlorophyll <u>a</u>)	In milligrams per cubic meter
PRODUCTIVITY, LAB-I (Incubator productivity)	Expressed as milligrams carbon assimilated per cubic meter per hour.
PRODUCTIVITY, DECK-I (Simulated <u>in situ</u> productivity)	Expressed as milligrams carbon assimilated per cubic meter per day.
LIGHT SAT	Data from light saturation experiments. Refer to text, page 6.
PROD (Productivity)	Productivity of sample receiving the indicated amount of illumination. Expressed as milligrams of carbon assimilated per cubic meter per hour.
FILT (Filter)	Indicates the per cent of total incubator illumination transmitted to the sample through a neutral density filter. The total incubator illumination in units of lux is listed at the bottom of the Biological Data section.

IRRAD (Irradiance)	Per cent of surface solar radiation reaching the indicated depth.
OXY (Dissolved oxygen)	Units are indicated in the column heading. In the Biological Data section oxygen is reported in milligram-atoms per liter. In the Interpolated and Computed Values oxygen is reported in milliliters per liter.
WATER COLUMN VALUES	Integrated values over the water column from the surface to the bottom of the euphotic zone for CHL-A, LAB-I, and DECK-I. The values at 100 meters and below are not included in this integration because they are below the euphotic zone.
MESSENGER TIME	Messenger time (ship's time, +8 zone) of the productivity cast.
INCOMING SOLAR RADIATION - AM ____ PM ____	Expressed in calories per square centimeter. The AM value is the integrated value of incoming radiation from sunrise to ship's noon; PM represents from ship's noon to sunset.
ZOOPLANKTON	Indicates that zooplankton samples were collected at this station. The information following indicates the type of sampler or net used, the type of tow made, the times of the tow, and the depths sampled, as follows:
(CLARKE-BUMPUS)	Clarke-Bumpus sampler
(HALF-METER NET)	Half-meter net
(MIDWATER TRAWL)	Midwater trawl
HORIZ	Horizontal tow
VERT	Vertical tow
OBL	Oblique tow
STEP	Stepped tow
TIME (from - to)	Ship's time (+8 zone) of the tow
DEPTHS	Depths sampled

Example: Station 318-6

ZOOPLANKTON (CLARKE-BUMPUS) HORIZ - TIME 0154-0204 DEPTHS 100, 70
0232-0243 30, 0

means that two horizontal tows using Clarke-Bumpus were made. The first tow began at 0154 ship's time, lasted until 0204 and sampled at 70 and 100 meters (two samplers on the wire). The second tow sampled at the surface and 30 meters and lasted from 0232 to 0243 ship's time.

LIGHT SATURATION
INCUBATOR ILLU-
MINATION

Total incubator illumination for light saturation experiments. Expressed in lux.

SP VOL ANOMALY
(Specific volume
anomaly, 10^{-5})

The anomaly of specific volume at the indicated temperature, salinity, and pressure compared to a standard water of 0°C temperature and 35 ‰ salinity, at the same pressure. Tabular values multiplied by 10^{-5} will give the anomaly in units of cubic centimeters per gram.

GEOPOT ANOMALY (Geo-
potential anomaly,
ΣAD)

Geopotential anomaly in dynamic meters of the layer of water between the surface and the indicated depth.

POT ENERGY (Potential
energy anomaly)

Potential energy anomaly in units of 10^8 ergs per square centimeter of the layer of water between the surface and the indicated depth.

VAR RATIO (Variance
ratio)

The ratio of the variance of the interpolation polynomial to the variance of the measurement. The value of the variance ratio is an indication of the adequacy of the vertical spacing of the observed values upon which the interpolation is based. See page 7. Values close to 1 indicate optimum spacing. Values greater than 3 indicate that the vertical spacing is inadequate to represent faithfully the distribution of properties in this region of the curve. In the case of missing values, where different combinations of observed values may be used to interpolate at the same depth, the variance ratio which indicates the worst spacing has been printed. Values greater than 100 have been printed as 99.99. If the observed depth corresponds to a desired standard depth, no interpolation is made and the variance ratio is not computed.

E(T) (Temperature interpolation error)	Interpolation error, in degrees Celsius, of the temperature value at this depth. For a discussion of the interpolation error, see page 7. If the observed depth corresponds to a desired standard depth, the interpolation error will be zero.
E(S) (Salinity interpolation error)	Interpolation error, in parts per thousand, of the salinity value at this depth. See comments under E(T) above.
E(O) (Oxygen interpolation error)	Interpolation error, in milliliters per liter, of the oxygen at this depth. See comments under E(T) above.
*	Indicates a questionable value. See page 8.
†	Indicates a hand-interpolated value. See page 8.

Codes Used for Reporting Observations

Taken from National Oceanographic Data Center Publication M-2, "Processing Physical and Chemical Data from Oceanographic Stations," or U.S. Navy Hydrographic Office Publication No. 606-c, "Hydrographic Office Observers Manual, Bathythermograph Observations," or U.S. Navy Hydrographic Office Publication No. 607, "Instruction Manual for Oceanographic Observations."

Cloud Type (taken from NODC Publication M-2) WMO Code 0500

Code

0	Cirrus	Ci
1	Cirrocumulus	Cc
2	Cirrostratus	Cs
3	Alto cumulus	Ac
4	Altostratus	As
5	Nimbostratus	Ns
6	Stratocumulus	Sc
7	Stratus	St
8	Cumulus	Cu
9	Cumulonimbus	Cb
x	Cloud not visible owing to darkness, fog, duststorm, sandstorm, or other analogous phenomena	

Amount of Cloud Cover (taken from NODC Publication M-2) WMO Code 2700

Code

0	0	0
1	1 okta or less, but not zero	1/10 or less, but not zero
2	2 oktas	2/10 - 3/10
3	3 oktas	4/10
4	4 oktas	5/10
5	5 oktas	6/10
6	6 oktas	7/10 - 8/10
7	7 oktas or more, but not 8 oktas	9/10 or more, but not 10/10
8	8 oktas	10/10
9	Sky obscured, or cloud amount cannot be estimated	

Visibility (taken from NODC Publication M-2) WMO Code 4300

Code

0	Less than 50 metres (less than 55 yards)
1	50-200 metres (approx. 55-220 yards)
2	200-500 metres (approx. 220-550 yards)
3	500-1,000 metres (approx. 550 yards-5/8 n.m.)
4	1- 2 km (approx. 5/8-1 n.m.)
5	2- 4 km (approx. 1- 2 n.m.)
6	4-10 km (approx. 2- 6 n.m.)
7	10-20 km (approx. 6-12 n.m.)
8	20-50 km (approx. 12-30 n.m.)
9	50 km or more (30 n.m. or more)

Direction (taken from NODC Publication M-2)

Compass Direction from which Wind, Sea, or Swell is coming

Code

00	Calm, or no value
01 to 36	Each value represents 1/10 of the true direction in degrees, measured clockwise from the north, with 36 representing true north.

State of the Sea - Wind Waves (taken from NODC Publication M-2)
WMO Code 3700

Code	Description	Height (Feet)
0	Calm (Glassy)	0
1	Calm (Rippled)	0 - 1/3
2	Smooth (Wavelets)	1/3 - 1 2/3
3	Slight	1 2/3 - 4
4	Moderate	4 - 8
5	Rough	8 - 13
6	Very Rough	13 - 20
7	High	20 - 30
8	Very High	30 - 45
9	Phenomenal	over 45

Swell Conditions (taken from H.O. 606-c or H.O. 607)

Code	Approx. Height in Feet	Description		Approx. Length in Feet
0	0	No swell		0
1 2	1 - 6	Low swell	Short or average Long	0 - 600 Above 600
3 4 5	6 - 12	Moderate	Short Average Long	0 - 300 300 - 600 Above 600
6 7 8	Greater than 12	High	Short Average Long	0 - 300 300 - 600 Above 600
9	---	Confused		

NUMERICAL WEATHER CODES—PRESENT WEATHER

00	01	02	03	04	05	06	07	08	09
Cloud development observed during past hour	Clouds generally increasing during past hour	Shine of sun or moon unchanged during past hour	Clouds generally increasing during past hour	Shine of sun or moon reduced by clouds during past hour	Shine of sun or moon unchanged during past hour	Shine of sun or moon reduced by clouds during past hour	Dust or sand falling at time of observation	Shine of sun or moon reduced by clouds during past hour	Shine of sun or moon unchanged during past hour
10	11	12	13	14	15	16	17	18	19
Light fog	Partial fog observed during past hour	Shine of sun or moon unchanged during past hour	Light fog observed during past hour	Partial fog observed during past hour	Partial fog observed during past hour	Partial fog observed during past hour	Thunder heard at time of observation	Thunder heard at time of observation	Thunder heard at time of observation

13. ABSTRACT This report contains tabulated physical, chemical, and biological data collected during Cruise 318 of the Research Vessel <u>Brown Bear</u> and biological data collected during Cruise 6301-E of the Research Vessel <u>Acona</u> during the months of January - March 1963 in an area within 250 miles of the coasts of Washington and Oregon. These data were collected as part of a year-round study which has as its objective the determination of the gross features of the movement and dispersion of Columbia River effluent water in the northeast Pacific.

INSTRUCTIONS

1. **ORIGINATING ACTIVITY:** Enter the name and address of the contractor, subcontractor, grantee, Department of Defense activity or other organization (corporate author) issuing the report.

2a. **REPORT SECURITY CLASSIFICATION** Enter the overall security classification of the report. Indicate whether "Restricted Data" is included. Marking is to be in accordance with appropriate security regulations.

2b. **GROUP:** Automatic downgrading is specified in DoD Directive 5200.10 and Armed Forces Industrial Manual. Enter the group number. Also, when applicable, show that optional markings have been used for Group 3 and Group 4 as authorized.

3. **REPORT TITLE:** Enter the complete report title in all capital letters. Titles in all cases should be unclassified. If a meaningful title cannot be selected without classification, show title classification in all capitals in parenthesis immediately following the title.

4. **DESCRIPTIVE NOTES:** If appropriate, enter the type of report, e.g., interim, progress, summary, annual, or final. Give the inclusive dates when a specific reporting period is covered.

5. **AUTHOR(S):** Enter the name(s) of author(s) as shown on or in the report. Enter last name, first name, middle initial. If military, show rank and branch of service. The name of the principal author is an absolute minimum requirement.

6. **REPORT DATE:** Enter the date of the report as day, month, year, or month, year. If more than one date appears on the report, use date of publication.

7a. **TOTAL NUMBER OF PAGES:** The total page count should follow normal pagination procedures, i.e., enter the number of pages containing information.

7b. **NUMBER OF REFERENCES:** Enter the total number of references cited in the report.

8a. **CONTRACT OR GRANT NUMBER:** If appropriate, enter the applicable number of the contract or grant under which the report was written.

8b, 8c, & 8d. **PROJECT NUMBER:** Enter the appropriate military department identification, such as project number, subproject number, system numbers, task number, etc.

9a. **ORIGINATOR'S REPORT NUMBER(S):** Enter the official report number by which the document will be identified and controlled by the originating activity. This number must be unique to this report.

9b. **OTHER REPORT NUMBER(S):** If the report has been assigned any other report numbers (either by the originator or by the sponsor), also enter this number(s).

10. **AVAILABILITY/LIMITATION NOTICES:** Enter any limitations on further dissemination of the report, other than those

imposed by security classification, using standard statements such as:

- (1) "Qualified requesters may obtain copies of this report from DDC."
- (2) "Foreign announcement and dissemination of this report by DDC is not authorized."
- (3) "U. S. Government agencies may obtain copies of this report directly from DDC. Other qualified DDC users shall request through _____."
- (4) "U. S. military agencies may obtain copies of this report directly from DDC. Other qualified users shall request through _____."
- (5) "All distribution of this report is controlled. Qualified DDC users shall request through _____."

If the report has been furnished to the Office of Technical Services, Department of Commerce, for sale to the public, indicate this fact and enter the price, if known.

11. **SUPPLEMENTARY NOTES:** Use for additional explanatory notes.

12. **SPONSORING MILITARY ACTIVITY:** Enter the name of the departmental project office or laboratory sponsoring (paying for) the research and development. Include address.

13. **ABSTRACT:** Enter an abstract giving a brief and factual summary of the document indicative of the report, even though it may also appear elsewhere in the body of the technical report. If additional space is required, a continuation sheet shall be attached.

It is highly desirable that the abstract of classified reports be unclassified. Each paragraph of the abstract shall end with an indication of the military security classification of the information in the paragraph, represented as (TS), (S), (C), or (U).

There is no limitation on the length of the abstract. However, the suggested length is from 150 to 225 words.

14. **KEY WORDS:** Key words are technically meaningful terms or short phrases that characterize a report and may be used as index entries for cataloging the report. Key words must be selected so that no security classification is required. Identifiers, such as equipment model designation, trade name, military project code name, geographic location, may be used as key words but will be followed by an indication of technical context. The assignment of links, roles, and weights is optional.
