DATE 19 April 1967

REPORT NO. NAEC-AML-2604

LABORATORY SHRINKAGE EVALUATION OF
NOMEX SUMMER FLIGHT SUITS

ASSIGNMENT 8-11 (13E)
UNDER AIRTASK A32 523 013 200/1 F020 03 01

AD 657853

A. Introduction

1. The development work and evaluation of melt resistant Nomex staple herringbone twill cloths for summer flight clothing is performed under reference (a) authorization.

2. Two summer flight suits (40R) fabricated by Aerospace Crew Equipment Laboratory (ACEL) from the Nomex cloth, reference (b), one suit with cloth overprinted with the camouflage pattern, were received on 31 March 1967. The suits and cloth used in their manufacture were subjected to the laboratory shrinkage evaluation requested by reference (c).

3. The laundering of Nomex staple herringbone twill cloth has previously been performed by shipboard procedures and home laundering procedures and shrinkage has not been excessive (reference (d)). Fabric tests on material to be used in the suit fabrication indicated (reference (e)) that shrinkage was acceptable (reference (b) requirement). The warp direction, shrinkage, however, is normally over 1 percent. Thus service complaints of shrinkage in coveralls may have resulted from warp direction shrinkage when coverall dimensions were on the minus tolerance.

B. Experimental Procedures

1. The laundry shrinkage test was performed by shipboard Formula S procedure in the Navy Laundering Handbook using fresh water. This is a wash at 140°F and is the highest temperature wash used on colored garments.

2. Measurements on the coveralls were taken at the Breast, Sleeve length, and Leg inseam locations specified (reference (f)). The front slide fastener length, seat width, and the length along the crotch seam from the slide fastener seam junction to the back cross seam were also measured.

Information Springfield Va. 22151

3. A 10 x 10 inch square was marked on the back cloth area to check cloth shrinkage. The standard 18 x 18 inch marks were used on cloth specimens to determine shrinkage.

C. Results and Discussion

1. The results of shrinkage tests are shown in Table 1.

2. The breast and sleeve dimensions are one size larger on the camouflage printed coverall. The printing stiffens the cloth and apparently reduced the fraying at the pattern edge and also enables sewing to be done closer to the edge of the material.

3. The change in coverall dimensions, except for the crotch measurement, correspond closely to the fabric shrinkage percentage. The 5 percent shrinkage in the crotch dimension appears to be due to seam puckering. The cloths are joined in the bias direction at the crotch so the normal restraint of warp or filling yarns on puckering is not present.

D. Conclusions

It is concluded that:

1. The cloth shrinkage is not excessive and conforms to specification (reference (b)) requirements.

2. The coverall dimensions, except for the crotch seam length, do not change excessively and are within coverall tolerance of plus or minus 1/2 inch. The crotch seam shrinkage is about 5 percent and appears due to seam puckering.

3. The camouflage printing stabilizes the cloth so the pattern may give a larger cloth area and/or less cloth is used in seaming. These conditions produce a larger size coverall than intended.

E. Recommendations

It is recommended that:

1. The laundered coveralls be measured and compared to standards to determine if the crotch shrinkage will result in wearer discomfort.

2. The coveralls made of the camouflage printed material be examined to determine if a reduction in pattern dimensions is required.

INSTRUCTIONS

1. **ORIGINATING ACTIVITY:** Enter the name and address of the contractor, subcontractor, grantee, Department of Defense activity or other organization (corporate author) issuing the report.

2a. **REPORT SECURITY CLASSIFICATION:** Enter the overall security classification of the report. Indicate whether "Restricted Data" is included. Marking is to be in accordance with appropriate security regulations.

2b. **GROUP:** Automatic downgrading is specified in DoD Directive 5200.10 and Armed Forces Industrial Manual. Enter the group number. Also, when applicable, show that optional markings have been used for Group 3 and Group 4 as authorized.

3. **REPORT TITLE:** Enter the complete report title in all capital letters. Titles in all cases should be unclassified. If a meaningful title cannot be selected without classification, show title classification in all capitals in parentheses immediately following the title.

4. **DESCRIPTIVE NOTES:** If appropriate, enter the type of report, e.g., interim, progress, summary, annual, or final. Give the inclusive dates when a specific reporting period is covered.

5. **AUTHOR(S):** Enter the name(s) of author(s) as shown on or in the report. Enter last name, first name, middle initial. If military, show rank and branch of service. The name of the principal author is an absolute minimum requirement.

6. **REPORT DATE:** Enter the date of the report as day, month, year, or month, year. If more than one date appears on the report, use date of publication.

7a. **TOTAL NUMBER OF PAGES:** The total page count should follow normal pagination procedures, i.e., enter the number of pages containing information.

7b. **NUMBER OF REFERENCES:** Enter the total number of references cited in the report.

8a. **CONTRACT OR GRANT NUMBER:** If appropriate, enter the applicable number of the contract or grant under which the report was written.

8b, 8c, & 8d. **PROJECT NUMBER:** Enter the appropriate military department identification, such as project number, subproject number, system numbers, task number, etc.

9a. **ORIGINATOR'S REPORT NUMBER(S):** Enter the official report number by which the document will be identified and controlled by the originating activity. This number must be unique to this report.

9b. **OTHER REPORT NUMBER(S):** If the report has been assigned any other report numbers (either by the originator or by the sponsor), also enter this number(s).

10. **AVAILABILITY/LIMITATION NOTICES:** Enter any limitations on further dissemination of the report, other than those

imposed by security classification, using standard statements such as:

- (1) "Qualified requesters may obtain copies of this report from DDC."
- (2) "Foreign announcement and dissemination of this report by DDC is not authorized."
- (3) "U. S. Government agencies may obtain copies of this report directly from DDC. Other qualified DDC users shall request through _____."
- (4) "U. S. military agencies may obtain copies of this report directly from DDC. Other qualified users shall request through _____."
- (5) "All distribution of this report is controlled. Qualified DDC users shall request through _____."

If the report has been furnished to the Office of Technical Services, Department of Commerce, for sale to the public, indicate this fact and enter the price, if known.

11. **SUPPLEMENTARY NOTES:** Use for additional explanatory notes.

12. **SPONSORING MILITARY ACTIVITY:** Enter the name of the departmental project office or laboratory sponsoring (paying for) the research and development. Include address.

13. **ABSTRACT:** Enter an abstract giving a brief and factual summary of the document indicative of the report, even though it may also appear elsewhere in the body of the technical report. If additional space is required, a continuation sheet shall be attached.

It is highly desirable that the abstract of classified reports be unclassified. Each paragraph of the abstract shall end with an indication of the military security classification of the information in the paragraph, represented as (TS), (S), (C), or (U).

There is no limitation on the length of the abstract. However, the suggested length is from 150 to 225 words.

14. **KEY WORDS:** Key words are technically meaningful terms or short phrases that characterize a report and may be used as index entries for cataloging the report. Key words must be selected so that no security classification is required. Identifiers, such as equipment model designation, trade name, military project code name, geographic location, may be used as key words but will be followed by an indication of technical context. The assignment of links, roles, and weights is optional.
