Table II	Mean Hourly Total Geomagnetic Field Intensity (F) at Bangkok--January 1966	3
Table III	Mean Hourly Total Geomagnetic Field Intensity (F) at Bangkok--February 1966.	4
Table IV	Mean Hourly Total Geomagnetic Field Intensity (F) at Bangkok--March 1966	5

I INTRODUCTION

Geomagnetic observations are being carried out at the Electronics Laboratory of the Military Research and Development Center (MRDC), a joint Thailand-United States organization at Bangkok, Thailand. The cooperation and participation of the staff members of the Thailand Ministry of Defense and the support of the United States Advanced Research Projects Agency and the United States Army Electronics Laboratory have made it possible for the data presented in this report to be accumulated.

The information about the site in Table I is pertinent.

Table I
GEOMAGNETIC SITE AT BANGKOK, THAILAND

Geographic		Geomagnetic		DIP *	Declination *
Latitude	Longitude	Latitude	Longitude		
13.72°N	100.57°E	2.5°N	169.83°E	10°27'N	0°10'W

The equipment at the site consists of the following:

Instrument: Varian V-4938A Rubidium Magnetometer

Full-Scale Sensitivity: 100γ (10⁵γ = 1 gauss)

Chart Speed: One inch per hour

Time Scale: Local time GMT + 7 hours

Range: Step-variable, in 90γ increments.

* Values obtained from the Geodesy Department, Ministry of Defense, Bangkok, Thailand.

II DISCUSSION

The data contained in this Bulletin are obtained with a Varian V-4938A rubidium magnetometer. The data base is available in two forms: (1) the continuous magnetogram recording and (2) a digital printout every 2 minutes, both measuring the total geomagnetic field intensity (F).

The hourly mean values of the total geomagnetic field intensity are given in Tables II through IV and are obtained by calculation from the digital data. The tabulation is for local mean time (GMT + 7 hours). The monthly mean values vs. local time of day are given in the bottom line of the tables and plotted in Figs. 1 through 3.

The Varian chart recorder used with the V-4938A magnetometer has an automatic range-changing system that shifts the range of the recording by 90γ when either chart extremity is reached. In Fig. 4 et seq. the range of F shown at the left of the chart is for the beginning of the day.

Magnetograms with a mean local time scale (GMT + 7 hours), showing disturbed days are given as follows:

- (1) Figures 4 through 6--the three most disturbed days of the month.
- (2) Figures 7 through 9--other days of interest--e.g., those showing a sudden commencement, or highly disturbed ($k_p \geq 5$).

DOCUMENT CONTROL DATA - R & D

(Security classification of title, body of abstract and indexing annotation must be entered when the overall report is classified)

1. ORIGINATING ACTIVITY (Corporate author)

Stanford Research Institute
Menlo Park, California 94025

2a. REPORT SECURITY CLASSIFICATION

UNCLASSIFIED

2b. GROUP

N/A

3. REPORT TITLE

GEOMAGNETIC DATA: BANGKOK, THAILAND --July-September 1966

4. DESCRIPTIVE NOTES (Type of report and inclusive dates)

Geophysical Data Report: Reporting period July through September 1966

5. AUTHOR(S) (First name, middle initial, last name)

Douglas J. Barnes John Chapman

6. REPORT DATE

September 1967

7a. TOTAL NO OF PAGES

20

7b. NO OF REFS

0

8a. CONTRACT OR GRANT NO.

Contract DA-36-039 AMC-00040(E)

b. PROJECT NO.

Order No. 5384 PM-63-91

c.

ARPA Order No. 371

d.

9a. ORIGINATOR'S REPORT NUMBER(S)
