SUMMARY

1. General

The Department of Defense conducted a survey of its in-house RDT&E organizations as of 15 September 1968. This report summarizes the characteristics and compensation patterns of scientists and engineers (S&E) in those organizations. The participants in the survey are as follows:

Number of establishments	Type of establishment	% of total S&Es surveyed
50	Army	40.4%
40	Navy	41.1%
27	Air Force	18.5%
117	DoD total	100.0%

2. Characteristics Other than Salary

Information was obtained on 26,437 civilian scientists and engineers, which represents 91.2 percent of those employed in the DoD's RDT&E activities. Degree-level distributions are summarized below:

Nondegreed	6.3%
Bachelor	66.2%
Master	19.1%
Ph.D.	8.1%
M.D., D.V.M., D.D.S	0.3%
Total	100.0%

Five levels of supervision were used to categorize the total sample as displayed in the following table:

Nonsupervisory	62.5%
Assistant unit head	14.2%
Unit head	12.3%
Middle management	8.1%
Top management	2.9%
Total	100.0%

Based upon the field of highest degree, 44.7 percent of the professionals are scientists and 55.3 percent are engineers. A further breakout of field of highest degree follows:

Field of highest degree	
Engineering	55.3%
Physics	17.2%
Mathematics and statistics	9.8%
Chemistry	7.7%
Life sciences (other than health)	2.4%
Social and behavioral sciences	2.2%
All other fields	2.2%
Other physical sciences	2.0%
Life sciences (health)	1.1%
Total	99.9%

A significant number of scientists and engineers identify themselves with fields other than the one in which they received their academic training. This is determined by the category, "working-as occupation," which is summarized as follows:

Working-as occupation	
Aeronautical and astronautical engineering	6.2%
Chemical engineering	1.6%
Electrical engineering	25.2%
Mechanical engineering	13.5%
Nuclear engineering	0.2%
Other engineering	2.0%
Total engineering	48.7%
Physics and astronomy	18.3%
Chemistry	13.6%
Atmospheric and space sciences	6.3%
Agriculture and biology	1.2%
Social and behavioral sciences	1.9%
Mathematics and statistics	10.0%
Total sciences	51.3%
Total	100.0%

The age distribution of the total sample, by degree level, is shown in Figure 1. For each grade, the age distribution is plotted in Figure 2. The following table summarizes the median ages and numbers below 40 years of age for each degree level:

Degree level	Median age (yr)	% 40 yr and above
No degree	51.1	11.3
B.S.	37.3	58.2
M.S.	39.0	53.0
Ph.D.	41.6	43.6
Total sample	38.8	53.0

3. Grade Distribution

The grade distribution of scientists and engineers in the military departments is plotted in Figures 3 and 4. Survey data on this distribution follow:

Department	Median grade	GS-14 and above
Army	12.9	19.8
Navy	12.7	15.8
Air Force	13.3	26.4

In Figure 5, the grade distribution for the total survey is plotted by degree level. These data are summarized as follows:

Degree level	Median grade	% GS-14 and above
No degree	13.1	17.2
B.S.	12.7	14.4
M.S.	13.2	24.8
Ph.D.	14.0	50.5

4. Compensation Patterns

The compensation patterns of selected groups of Defense scientists and engineers are plotted in Figures 6 through 10.

Nonsupervisory engineers are compensated at a slightly higher rate than nonsupervisory physical scientists for all degree levels and at practically all years of experience (see Figure 6).

The salaries of the various levels of supervision are plotted by degree level in Figures 7 and 8. The higher the degree level, the higher the compensation. The same relationship applies to the various supervisory levels—the higher the management level, the higher the salary.

The median salary of nonsupervisory professionals in seven fields is plotted in Figure 9, by field of highest degree. Engineering has the highest median salary for both B.S. and M.S. professionals, $1,213 and $1,277 per month, respectively. Life sciences (health-related) has the lowest monthly median salary for both of these degree levels, $968 and $1,045, respectively. Median salaries for the total sample are $1,187 and $1,247 for B.S. and M.S. holders, respectively. For Ph.D. professionals, the field of mathematics and statistics exhibits the highest median salary, $1,604 per month, and life sciences has the lowest, $1,387 per month. For the total sample, the median monthly salary for Ph.D.'s is $1,446.

Median nonsupervisory salaries in working-as occupations are plotted in Figure 10. Eight occupations are compared. Aeronautical and astronautical engineering shows the highest salary for all degree levels—B.S. $1,224, M.S. $1,291 and Ph.D. $1,591 per month. For Bachelors, the field of mathematics and statistics has the lowest monthly median salary, $971. For Masters, social and behavioral sciences are the lowest, $1,134 per month; and for Ph.D.'s, mechanical engineering shows the lowest salary, $1,262 per month.

1. INTRODUCTION

The purpose of this survey was to obtain information about the salaries and selected characteristics of both civilian and military scientists and engineers engaged in research, development, test and evaluation (RDT&E) as employees of the Department of Defense. This report covers information on civilian scientists and engineers only. A separate survey report on military scientists and engineers will be issued.

Employee information as of 1 September 1968 has been obtained from individual scientists and engineers in DoD activities who devote 50 percent or more of their time to RDT&E. This includes degreed and nondegreed professionals and all levels of supervision. Technicians and nontechnical professionals are excluded.

Almost all the DoD's RDT&E activities participated in the survey —50 Army, 40 Navy and 27 Air Force organizations.

This survey report contains two major categories. The first reflects characteristics, other than salary, of the reporting RDT&E activities and of the scientists and engineers surveyed. The second summarizes salary information relating to such variables as years since first degree, age, field of degree, and working-as occupation. Questionnaires used in the survey appear in Appendix A. The methods used in analyzing the data are similar to those employed in the 1968 National Survey[1].

2. NONSALARY DATA ON ESTABLISHMENTS AND EMPLOYEES

This section describes the characteristics of the scientists and engineers whose salaries are reported in section 3. Tables 1 through 15 reflect the characteristics of the sample and may be useful in interpreting the salary data.

Composition of the DoD Survey (Table 1): Distributions are shown by military department and by type of organization—laboratory and non-laboratory. Among the non-laboratories are test centers, proving grounds and ranges that are not normally categorized as laboratories.

Field of Highest Degree/Degree Level (Table 2): The distribution of the sample is shown by field of highest degree. All fields of engineering were grouped into a single category for easy analysis. Note that this table excludes nondegreed personnel.

Occupation by Degree Level (Table 3): The occupations that best describe the primary work activity of the survey participants are summarized. The table includes degreed as well as nondegreed individuals. Several fields were also grouped here, as was done in Table 2.

Primary Work Activity by Degree Level (Table 4): This is the distribution of primary work activity by degree level. All percentages shown in Table 4(A) are based on column sum; Table 4(B) contains the same data, but percentages are based upon row sum.

Primary Work Activity by Field of Highest Degree (Table 5): The distribution of primary work activity by field of highest degree is summarized here. Nondegreed professionals are excluded. This matrix shows the sources, by field of degree, of the various work activities. The data are displayed two ways: All percentages are based on column sums in Table 5(A) and on row sums in Table 5(B).

Supervisory Level by Degree Level (Table 6): The distribution of the total sample is shown by five levels of supervision, including nonsupervisory. For definitions of these supervisory levels, see Appendix A.

Functional Area by Degree Level (Table 7): The distribution of the total sample is shown by functional area and degree level. The functional areas are research, development, and test and evaluation.

Functional Area vs. Degree Level (Table 8): The distribution of professionals by functional area is summarized two ways. All percentages are based on column sums in Figure 8(A) and on row sums in Table 8(B).

Age by Degree Level (Table 9): The age/degree-level distribution of the total sample is displayed here. Five-year age groupings were used for purposes of analysis. Similar displays by years since first degree are included in section 3 of this report as part of the salary scatter diagrams and cells. The relationship between age and years since first degree is shown in Table 10.

Age vs. Years Since B.S. (Table 10): Age versus years since first degree (i.e., B.S.) is displayed in this scatter diagram.

Comparisons by Sex (Tables 11 through 14): Comparisons are made between male and female professionals in the total sample by supervisory level, degree level, field of highest degree, and age.

Civilian Grade vs. Age (Table 15): The civilian grade-age distribution of the total sample is displayed in Tables 15(A) and 15(B). All percentages in the former are based on column sum, and on row sum in the latter. Five-year age groupings were used for purposes of analysis.

				GS-1340	GS-1640

1/ (Continued) Military professionals, both officer and enlisted actively engaged in RDT&E activities, are those identified with the functions described in the above referenced civilian job series. Generally, these jobs are referenced in Department of Defense Occupational Conversion Tables DoD 1312.1-0, DoD 1312.1-E under DoD groups 5 and 6 of DoD 1312.10, and various other groups of DoD 1312.1-E, published under the provisions of reference (b). Lawyers, accountants, chaplains, social workers and educators should be excluded.

Data cards are not to be completed for technicians. A technician is defined generally as a non-professional working on an RDT&E project or program in support of a professional. In the case of civilians it will include, but not necessarily be limited to, those holding positions which fall into the following categories of the Civil Service Occupational Groups and Series of Classes, General Schedule (GS), August 1965:

GS-181	GS-647	GS-683	GS-1311
GS-404	GS-648	GS-802	GS-1341
GS-421	GS-649	GS-817	GS-1371
GS-644	GS-650	GS-818	GS-1374
GS-645	GS-659	GS-856	GS-1521

Military technicians identified in DoD Instruction 1312.1-E or who meet the above guidelines should not be included.

2/ Definition of Test and Evaluation

The proof testing of equipment, materials, devices, components, systems and methodologies under controlled conditions and the systematic evaluation of test data to determine the degree of compliance of the test item with predetermined criteria and requirements. This work is characterized by the application of test plans to be carried out in-house or under contract or grant utilizing one or more of the following kinds of tests: physical measurement techniques, controlled laboratory, shop, and field (demonstration) trials; and simulated environmental techniques. Testing directly related to research or development of hardware will be covered under those categories.

This category includes

(a) Testing to determine the suitability of the test item for use in its environment

(b) Production and post-production testing to determine operational readiness

2/ (Continued)

(c) Testing in regulatory programs to determine compliance with laws, regulations and standards

(d) Testing in the social sciences using demonstration or experimental and control groups to determine the effectiveness of new methodologies or practices.

3/ Professional supervisor - refers to professionals who spend a major portion of their time in the direction and or administration of analytical, scientific or technical efforts. This includes the executives of the organization and the principal line and staff offices concerned with the technical efforts. Middle and first line management includes such individuals as group leaders, research managers, section heads, project leaders, research supervisors, department heads, and branch heads who spend over half of their time in managing, directing, planning and administering the activities of others.

4/ Full-Time Equivalents

Full-time equivalents are part-time work converted into full-time units, each unit equaling the number of hours normally worked per week at the place of employment. For example, if you worked 20 hours per week for a year, this would be equivalent to six months of full-time work, assuming 40 hours per week in the normal work week.

Professional Experience

Professional experience refers to experience in a position in which training equivalent to that acquired through completion of a four year college course is required and in which the knowledge acquired by such academic training is essential to the performance of the duties.

5/ Research - Includes all effort directed toward increased knowledge of natural phenomena and environment and efforts directed toward the solution of problems in the physical, behavioral and social sciences that have no clear direct military application. It would, thus, by definition, include all basic research and, in addition, that applied research directed toward the expansion of knowledge in various scientific areas regardless of the type of funds used. It does not include efforts directed to prove the feasibility of solutions of problems of immediate military importance or time-oriented investigations and developments. The Research elements are further characterized by using level of effort as the principal program control.

6/ Development -

a. Exploratory Development - Includes all effort directed toward the solution of specific military problems, short of major development projects. This type of effort may vary from fairly fundamental applied research to quite sophisticated bread-board hardware, study, programming and planning efforts. It would thus include studies, investigations and minor development effort. The dominant characteristic of this category of effort is that it be pointed toward specific military problem areas with a view toward developing and evaluating the feasibility and practicability of proposed solutions and determining their parameters regardless of the type of funds used. Program control of the Exploratory Development element will normally be exercised by general level of effort.

b. Advanced Developments - Include all projects which have moved into the development of hardware for experimental or operational test regardless of the type of funds used. It is characterized by line item projects and program control is exercised on a project basis. A further descriptive characteristic lies in the design of such items being directed toward hardware for test or experimentation as opposed to items designed and engineered for eventual Service use. Examples are VTOL Aircraft, ARTEMIS, Experimental Hydrofoil, X-15, and Aerospace Plane Components.

c. Engineering Developments - Include those development programs being engineered for Service use but which have not yet been approved for procurement or operation. For example: MAULER, TYPHON, and F-111. This area is characterized by major line item projects and program control will be exercised by review of individual projects.
