OCEANOGRAPHIC STATION DATA**

Reproduced by the
CLEARINGHOUSE
for Federal Scientific & Technical
Information Springfield Va. 22151

**PUBLICATION C-1
REVISED 1969**

463

The National Oceanographic Data Center is sponsored by U. S. Government agencies having an interest in the marine environment; it is governed by an Advisory Board composed of representatives of these activities and the National Academy of Sciences. The U. S. Naval Oceanographic Office is assigned responsibility for management of the National Oceanographic Data Center.

The Sponsoring Agencies are:

Atomic Energy Commission
Bureau of Commercial Fisheries
Coast Guard
Coastal Engineering Research Center
Department of the Navy
Environmental Science Services Administration
Federal Water Pollution Control Administration
Geological Survey
Health, Education & Welfare
National Science Foundation

NATIONAL OCEANOGRAPHIC DATA CENTER

**REFERENCE SOURCES
FOR
OCEANOGRAPHIC STATION DATA**

**PUBLICATION C-1
(REVISED 1969)**

ACKNOWLEDGMENT

The bibliographic input and automation of the information have been provided under contract by the American Meteorological Society under the general guidance of Mr. Thomas Cales, with the assistance of Mrs. Jean Fenimore and Mrs. Susanne Manovill. NODC staff participating in the preparation of this Catalog included Mrs. Charlotte Ashby and Mrs. Carmen Johnson.

INTRODUCTION

The oceanographic station data archives of the National Oceanographic Data Center (NODC) form a unique collection which is probably the largest of its kind in the world. These archives have been established to make marine data available to the scientific community and the general public. Nearly 80 percent of the stations in the NODC archives are of foreign origin, many of them obtained in exchange for processing services. The remaining domestic (U. S.) collection has been acquired from Government sources, academic institutions, and private organizations.

These data may be obtained in the form of machine listings, punched cards, or magnetic tape, sorted either by geographic area or by reference number (source). They include physical-chemical parameters (observed serially against depth) and interpolated, computed values at discrete depths.

This Catalog, which supersedes NODC Publication C-1 issued in 1965, is intended to inform actual or potential station data users of the sources applied in creating NODC's archives.

The information in this Catalog has been presented in four ways:

1. Numerically, by NODC Reference Number.
2. Alphabetically, by ship's name.
3. Chronologically, by year of observation.
4. Geographically, by Marsden Square.

Further details will be given at the beginning of each section.

TABLE OF CONTENTS

<u>Title</u>	<u>Page</u>
Acknowledgment	iii
Introduction	iv
Table of Contents	v
Section 1. Numerical References	1
Section 2. Ship Index	347
Section 3. Chronological Index	395
Section 4. Geographical Index	417
<u>Appendix</u>	
A. NOEC Country Codes	459
B. Marsden Squares	461

SECTION 1

NUMERICAL REFERENCES

In general, the sources given in this Section are those actually used for the data processed under the respective NODC Reference Number. However, the data were in certain instances adjusted to correspond with later publications or modified after personal communication with the originator. When manuscript or machine-processed data were used as an NODC source, no effort was made to cite subsequent publication (if any) of such data.

Within each reference the information appears as follows:

NODC Reference Number.

Organization or institution originating data, and title (if source is publication).

Format of data or publication reference (if known).

Name of ship(s). Year-day(s)-month(s) of observations.

Project or Expedition Title.

Originator's Cruise Number.

Number of observations (stations)

Source location (library or file).

The NODC Reference Number is made up of:

a. An initial two-digit or alphabetic country code (see Appendix A for list of countries and corresponding codes). The country code reflects the nationality of the agency sponsoring or operating a vessel for a particular cruise. If two countries were sponsoring a particular cruise, the NODC arbitrarily assigned one country code, preferably that of major sponsor, if possible to determine.

References are given numerically according to the country code assignments. Letter-code assignments follow the numerical arrangements.

Countries originating data, therefore, do not appear in alphabetical order. Appendix A, an alphabetical listing of countries and their respective codes, is furnished to guide the user in searching for references by country.

b. An NODC cruise number, an arbitrary three- or four-digit number (three-digit numbers are sometimes introduced by a hyphen) assigned by NODC to the source document(s) from which the data were coded. NODC cruise numbers in the "8000" block have been reserved, at present, for ocean station data obtained by a continuously recording STD instrument or for a mix of Nansen cast and STD data.

Organization or institution originating data, and title (if source is a publication)

If the organization or institution is unknown, the name of the person who contributed or reported the data is given, if available. If two countries sponsored a cruise, both institutions are entered; but the country code for the numerical reference is assigned by NODC as mentioned above. Following the organization or institution is the title of the published source.

Format of data or publication reference (if known)

These sources, which are obtained from various government agencies, oceanographic institutions, and universities, both in the United States and abroad, appear in various formats including publications and unpublished materials such as listings, coding forms, punched cards, or magnetic tape. Many sources are obtained through exchange programs established with other national and international data centers and organizations. In some cases, the data are composite from more than one source.

Name of ship(s)

Ships' names or names of platforms or stations are provided whenever known. For some old data reflecting the work of many ships, no attempt was made to identify the ships or to correlate them with their respective data. Indented under the ship's name may appear Project or Expedition Title and Originator's Cruise Number, if known.

Year-day(s)-month(s) of observations

These dates represent only that period for which station data have actually been processed and archived by NODC; they are not intended to signify the duration of a cruise or expedition. When data from two or more ships or platforms are included for a single reference, the dates for each ship's observations are given separately. Occasionally, only the year appears; at other times, only the year and months are noted.

Number of observations (stations)

The number of observations (stations) refers to those which have been placed on magnetic tape by NODC. In some sources, the introduction discusses more observations than are actually published; hence, there may be a discrepancy between the expected number of observations and those actually available.

Source location (library or file)

One or more of the following source locations are used to indicate where the source may be located:

- a. NODC files: Copies of most of the sources used to compile the station data tape file are available on microfilm at NODC. The file number is the same as the Reference Number.
- b. WDC-A files: Many data have been taken from the files of World Data Center A (WDC-A). Oceanography, which is collocated with the NODC. File numbers used in WDC-A are also included.
- c. DNO: The library of the Naval Oceanographic Office was used extensively for gathering data. File numbers or serial references used in that library are included.

SECTION 2

SHIP INDEX

In this Section ships' names are listed alphabetically, together with the corresponding year(s) of observations and NODC Reference Numbers. (For an explanation of the latter and further information, see Section 1).

It should be noted that some of the older data in the NODC file are not referenced to ship's name. Thus, data from multiship source documents may not be referenced in this Section. Sources in which the ship's name is unknown are also omitted.

In this Index the following abbreviations have been used to indicate country of origin for ships having duplicate names.

(Finl.)	Finland
(Germ.)	Germany
(Icel.)	Iceland
(Mex.)	Mexico
(Neth.)	Netherlands
(Nor.)	Norway
(Sov. U.)	Soviet Union
(Swed.)	Sweden
(U.K.)	United Kingdom
(U.S.)	United States

Lightvessels have the abbreviation LV appended to their name.

SECTION 4

GEOGRAPHICAL INDEX

In this Section, NODC Reference Numbers are given for each Marsden square (see Appendix B) in which there are one or more oceanographic stations. (For an explanation of NODC Reference Numbers and further information, see Section 1.)

The entries in this Section were manually prepared from computer listings of the data and apply only to sources listed in Section 1. At the time of compilation, the magnetic tape data files were undergoing reprocessing and were not available for preparation of this Index. However, NODC Publication C-3 shows a computer-prepared geographic distribution of stations in the magnetic tape files.

APPENDIX B

MARSDEN SQUARES

In the Northern Hemisphere, Marsden squares (10-degree squares) have been sequentially numbered in a westerly progression beginning at the Equator and the Greenwich Meridian; 001 is between 0 degrees - 10 degrees N and 0 degrees - 10 degrees W. The consecutive sequence continues by 10-degree bands to the north and ends with 288 at latitude 80 degrees N. Numbering for the 10-degree band 80 degrees - 90 degrees N is according to the same scheme; it begins with 901 and ends with 936. In the Southern Hemisphere, the numbering begins with 300 at the Equator and Greenwich Meridian and runs in a consecutive sequence westward. The numbering ends with 623 at latitude 90 degrees S.

Figure 1 shows a map of the world outlining the Marsden squares. Each 10-degree square is subdivided into one hundred 1-degree squares, which are identified as 00 through 99 and arranged according to the pattern shown in Figure 2.
