13. ABSTRACT			
This report lists the nations and nation dyads to be factor analyzed for the year 1950, and is divided into two major sections. The first section is concerned with the variables and nations comprising 1950 attribute space; the second section gives the variables and dyads defining the behavior space of nations. This is an in-house document of the Dimensionality of Nations Project for those associated with the project, and is part of the research on the behavioral and attribute dimensions of international relations.

INTRODUCTION

A major goal of the Dimensionality of Nations Project (DON) is to determine the patterns of attributes and behavior of nations at five points in time: 1950, 1955, 1960, 1963, and 1965.¹ These data points were selected in terms of data availability and previous analyses, as well as to span the post-World War II changes in international relations. Once patterns are delineated at these five points, DON then can measure the change in international systems since 1950, plot the shift overtime in the behavior of particular nations or pairs of nations (dyads), such as the Soviet Union's behavior towards China and France to the U.S.A., and relate these movements to changes in socio-economic and political distances between nations.

Analyses of 1955 data into nation attribute and behavioral patterns have been completed.² In total, about five hundred variables, eighty-two nations, and over three-hundred pairs of nations were involved in the analyses.³ Data collection for 1963 is virtually completed for about four hundred variables on over a hundred nations and the same number of pairs of nations as analyzed in 1955.⁴

¹Past and projected research and goals of DON are described in "The DON Project: A Five Year Research Program," Research Report No. 9, 1967. For an overview of project results, see "Some Empirical Findings on Nations and Their Behavior," Research Report No. 10, forthcoming, World Politics, January, 1969.

²See R. J. Rummel, "Some Attribute and Behavioral Patterns of Nations," Journal of Peace Research, No. 2, 1967, and "Delineating International Patterns and Profiles," The Computer and the Policy Making Community, forthcoming, 1968. See also Jack Sawyer, "Dimensions of Nations: Size, Wealth, and Politics," American Journal of Sociology, September, 1967. The major work incorporating the 1955 findings is R. J. Rummel, Dimensions of Nations, forthcoming.

³The variables are described in the following DON Project reports: "236 Variable Revised List of Variables and Indices," 1963; "Definitions, Sources, and Years for 236 Variables," 1964; "Dyadic Study: Tentative Variable List," 1964. The nations analyzed are given in: "Dyadic Relations Random Sample," 1964 and "Dyadic Relations Selected Sample," 1964.

⁴The variables upon which data are being collected for 1963 are given in "Dyadic Study Second Revised Variable List," Research Report No. 3, 1966, and "Attribute Space of Nations for 1963: Variable List," Research Report No. 5, 1966. The selected sample of dyads remains the same as that employed for 1955. The random sample is listed in "1963 Dyadic Relations RANDOM Sample," Dimensionality of Nations Project, 1965.

This report lists the variables, nations, and dyads to be analyzed in 1950 and is divided into two major sections. The first section is concerned with the variables and nations comprising the 1950 attribute space. The second section gives the variables and dyads defining the behavior space of nations.

1. ATTRIBUTE SPACE

1.1 Variables. The following list of 97 variables is selected to encompass the widest range of variation among nations on their many diverse attributes. Data collected on these variables for 72 sovereign nations will be factor analyzed to define the 1950 dimensions of attribute space, as was done in 1955 and will be done for 1963. The Euclidean distance between nations on these dimensions then will be related to their 1950 behavior as defined in Section 2.

The analysis of the 97 variables given here will measure the stability of the dimensions of attribute space delineated for 1955 and 1963. Moreover, the change in attribute space location (factor scores) for nations between 1950, 1955, and 1963 can be related to shifts in behavior between nations (e.g., US-Cuba) during these periods.

The procedures for selecting the 97 variables are the same as those employed for the 1963 attribute space variables and were as follows:

- (1) Five of the highest and substantively distinctive loading variables were taken from each oblique factor formed in 1955 data for 236 variables.⁵ This will determine the replicability of the 1955 and 1963 dimensions and allow the shift in nation values to be measured.
- (2) Ten of the variables with the lowest communalities and not otherwise selected by (1) above were included. Any change between 1950 and 1955 of the common and unique components of attribute space can thus be observed.
- (3) Eight rescaled political variables from Banks and Textor, CROSS POLITY SURVEY, and three United Nations voting variables were included to give a better definition to the political dimensions found in 1955 data.

Where possible, adherence is given to the definitions of the variables in "Variable Definitions, Data Sources and Year," Dimensionality of Nations, 1964.

⁵See "Oblique Rotated Tables for 236 Variables," Dimensionality of Nations Project, 1965.

1950 Attribute Space Variable List

<u>Factor</u> ⁶	<u>No.</u>	<u>List</u> ⁷ <u>No.</u>	<u>Code</u>	<u>Name</u>	<u>Set</u> ⁸ <u>No.</u>	<u>Columns</u> ⁹
<u>Factor 1: Economic Development</u>						
	1.	(11)	TEL-PC	telephones / population	20	7-11
	2.	(3)	%A-POP	agricultural population / population	20	17-21
	3.	(83)	ENC-PC	energy consumption / population	20	27-31
	4.	(10)	ILLITE	illiterates / population 10 years of age or older	20	37-41
	5.	(23)	GNP-PC	GNP / population	20	47-51
<u>Factor 2: Power Bases (Size)</u>						
	6.	(63)	EXPP	population x energy production	20	57-61
	7.	(29a)	NI	national income	20	67-71
	8.	(18)	POPULA	population	21	7-11
	9.	(190)	%CT-UN	UN assessment / total UN assessment	21	17-21
	10.	(60)	DEFEXP	defense expenditure	21	27-31
<u>Factor 3: Political Orientation</u>						
	11.	(204)	E/TRSL	English titles translated/ foreign titles translated	21	37-41
	12.	(198)	BLOC	bloc membership	21	47-51
	13.	(202)	US/AID	US aid received / USSR and US aid received	21	57-61
	14.	(65)	TOTALI	freedom of opposition	21	67-71
	15.	(162)	TFC/CP	IFC and IBRD subscription / (GNP) ² per capita	22	7-11
<u>Factor 4: Foreign Conflict</u>						
	16.	(191)	THREAT	threats	22	17-21
	17.	(156)	ACCUSA	accusations	22	27-31
	18.	(157)	F-KILL	killed in foreign violence	22	37-41
	19.	(152)	MILACT	military action or not	22	47-51
	20.	(147)	PROTST	protests	22	57-61
<u>Factor 5: Domestic Conflict</u>						
	21.	(144)	D-KILL	killed in domestic violence	22	67-71
	22.	(137)	STRIKE	general strikes	23	7-11
	23.	(141)	RIOTS	riots	23	27-31
	25.	(143)	DEMONS	demonstrations	23	37-41

⁶This is the 1955 oblique factor that the variables are selected to index.

⁷These numbers refer to the "236 Variable Revised List of Variables and Indices," Dimensionality of Nations Project, 1963.

⁸Set numbers are punched in columns 5-6 on data cards.

⁹These are the locations in which the data for the variables are to be punched.

Factor 6: Catholic Culture

26.(123)	%CATH	Roman Catholics / population	23	47-51
27.(210)	US-DIS	air distance from U. S.	23	57-61
28.(195)	MED/NG	medicine NGO / NGO	23	67-71
29.(149)	ER-AMB	ambassadors expelled or recalled	24	7-11
30.(104)	DIV-MR	divorces / marriages	24	17-21

Factor 7: Density

31. (17)	DENSITY	population / national land area	24	27-31
32. (43)	ZARABL	arable land / total land area	24	37-41
33. (41)	AREA	national area	24	47-51
34. (108)	RDS-KM	road length / national area	24	57-61
35. (110)	RR-KM	railroad length / national area	24	67-71

Factor 8: Oriental Culture

36. (90)	RELGRP	religions	25	7-11
37. (216)	IM/I+E	immigrants / migrants	25	17-21
38. (45)	RAIN	average rainfall	25	27-31
39. (91)	RGRP/P	membership of largest religion / population	25	37-41
40. (103)	ZD-WTR	dwellings with running water / dwellings	25	47-51

Factor 9: (Unlabelled)

41. (222)	FST/ST	foreign college students / college students	25	57-61
42. (200)	NEUTRL	membership in Neutral bloc	25	67-71
43. (59)	NATAGE	age of country	26	7-11
44. (120)	REL/TI	religious titles published / book titles	26	17-21
45. (31)	ZNI/P	% increase in national income / % increase in population	26	27-31

Factor 10: Seaport Dependency

46. (215)	ENG/PP	emigrants / population	26	37-41
47. (118)	SG/GNP	seaborne goods / CNP	26	47-51
48. (192)	LAW/NG	law NGO / NGO	26	57-61
49. (33)	ZUNEMP	unemployed / economically active population	26	67-71
50. (229)	EX/EPT	leading export / exports	27	7-11

Factor 11: Diversity

51. (94)	LANGRP	languages	27	17-21
52. (95)	LGRP/P	membership of largest language group / population	27	27-31
53. (92)	ETHGRP	ethnic groups	27	37-41
54. (160)	AIDRVD	economic aid received	27	47-51
55. (168)	D-TR	technical assistance received	27	57-61

Factor 12: Equality

56. (37)	(E-GVT	government education expenditures / government expenditures	27	67-71
57. (35)	P-50%	percent population with 50% of land	28	7-11
58. (133)	N-AFFI	desire for affiliation	28	17-21
59. (127)	FM/WKS	female workers / economically active	28	27-31
60. (172)	MT/TRE	military treaties / treaties	28	37-41

Factor 13: Traders

61. (228)	EP/GNP	exports / GNP	28	47-51
62. (132)	N-ACHV	desire for achievement	25	57-61
63. (180)	MSNT/M	foreign mail sent / foreign mail	28	67-71
64. (225)	IP/TRD	imports / trade	29	7-11
65. (28)	P-INDX	cost of living index	29	17-21

Factor 14: Sufficiency

66. (50)	CAL-PC	calories consumed minus calories required / calories required	29	27-31
67. (49)	PR/CAL	proteins / calories	29	37-41
68. (205)	R/TRSL	Russian titles translated / foreign titles translated	29	47-51
69. (62)	MIL/PP	military personnel / population	29	57-61
70. (234)	BOT/GO	balance of investment / gold stock	29	67-71

Factor 15: Unlabelled

71. (78)	PARTYS	political parties	30	7-11
72. (188)	APT/NG	arts and culture NGO / NGO	30	17-21
73. (130)	COM/PP	communist party membership / population	30	27-31
74. (76)	GUT-PC	government expenditure / GNP	30	37-41
75. (129)	MONARC	monarchy or not	30	47-51

Unique Variables¹⁰

76. (21)	PRIMCY	primacy (of largest city) measure	30	57-61
77. (38)	PUP-PT	pupils in primary school / primary school teachers	30	67-71
78. (72)	LAWTRA	legality of government change	31	7-11
79. (73)	LEGIT	legitimacy of present government	31	17-21
80. (93)	EGRP/P	largest ethnic group membership / population	31	27-31
81. ASSASS (136)		assassinations	31	37-41
82. GVTCRS (139)		major government crises	31	47-51
83. UNDE/C (189)		UN delinquencies / assessment	31	57-61
84. BOP/GO (227)		balance of payments / gold stock	31	67-71
85. INVBAL (233)		balance of investments	32	7-11

Additional Political Variables

86. STYLE	system style (0 = non-mobilizational; 1 = limited mobilizational; 2 = mobilizational)	32	17-21
87. CONSTI	constitutional status (0 = totalitarian; 1 = authoritarian; 2 = constitutional)	32	27-31
88. ELECTO	electoral system (0 = non-competitive; 1 = partially competitive; 2 = competitive)	32	37-41

¹⁰These are the variables with among the lowest communalities (h^2); their communalities range from .24 to .49.

89. COMTUN	non-communist regime (0 = no; 1 = yes)	32	47-51
90. LEADER	political leadership (0 = elitist; 1 = moderately elitist; 2 = non-elitist)	32	57-61
91. POWDIS	horizontal power distribution (0 = negligible; 1 = limited; 2 = significant)	32	67-71
92. MILPAR	military participation (0 = neutral; 1 = supportive; 2 = interventive)	33	7-11
93. BUREAU	bureaucracy (0 = traditional; 1 = semi-modern; 2 = modern)	33	17-21
94. UNF ₁	factor scores on first 1963 UN voting dimension	33	27-31
95. UNF ₂	factor scores on second 1963 UN voting dimension	33	37-41
96. UNF ₃	factor scores on third 1963 UN voting dimension	33	47-51
97. CENSOR	censorship score	33	67-71

1.2 Nations. All nations that were sovereign in 1950, in the sense of maintaining a foreign ministry and exchanging ambassadors with other nations, are to be included in the data collection and analysis. Nations that attained sovereignty between 1947 and 1948 were excluded. This is to avoid mixing into the analysis variance associated only with the transition of foreign and domestic policies and behavior from colonial status to sovereignty. Small nations, such as Iceland, Kuwait, and Lichtenstein also are excluded from the data collection.

The following nations were included in the 1955 analyses, but are to be excluded from the 1950 analyses for the following reasons:

1. Austria: 1938-1955 occupied;
2. Cambodia: 1949-1953 colony;
3. Republic of China: independent only since 1949;
4. Germany (D.D.R.): occupied until 1949;
5. Germany (Fed. Rep.): " " "
6. Japan: occupied until 1952;
7. Libya: 1946-1952 mandate;
8. Laos: 1949-54 colony;
9. Vietnam (North): became independent in 1954;
10. Vietnam (South): " " " "

Egypt is questionable, but was finally included for 1950 based upon Egypt being listed as independent from 1922-1956 by J. David Singer and Bruce Russett in a forthcoming (1968) American Political Science Review article.

The final list of nations for 1950 data collection is as follows:

Listing of Nations in the 1950 Analyses

<u>I.D.*</u>	<u>Political Unit</u>	<u>Code</u> <u>Abbreviation</u>	<u>I.D.</u>	<u>Political Unit</u>	<u>Code</u> <u>Abbreviation</u>

N = 72

*Each nation's I.D. is the same for the 1950, 1955, and 1963 data collections and analyses.

2. BEHAVIORAL SPACE

2.1 Variables. As in the 1963 dyadic list, variables have been classified by domain and domain by analytical category. The domains serve to organize the variables according to the major concept they were selected to index. Analytical categories indicate the level of analysis at which the variables function. Corresponding to the analytical theory¹¹ in which the dyadic analyses are now imbedded, there are two such categories: the behavioral and attribute spaces. The behavioral space encompasses the international behavior of governments and people towards each other. The attribute space comprises those characteristics of a nation that distinguish it from at least some other nations. The theory is that the Euclidean distances between two nations in the space of their attributes are forces acting on the location (components) of the dyad in behavioral space.

Section 1.1, above, lists variables defining attribute space. The data are collected for these variables on each nation given in Section 1.2. The order of the matrix formed from these data is 72 nations by 94 attributes. The attribute space variables collected for dyads, however, are on pairs of nations, and consist of the attribute of the actor, and the socio-economic, geographic, and cultural distances between actor and object. Thus, the matrix formed from this attribute data is of order dyads by attributes. The attribute variables of Section 1.1 locate a nation in attribute space; the attribute variables to be given below for dyads measure how close two nations are in the space.

Some of the dyadic variables are grouped into a third methodological category. This involves indicators of the unreliability of the data collected for the variables classified under the behavior or attribute categories.

As for 1955 and 1963, the behavior and attribute variables will be factor analyzed separately and together. Regressions of selected behavioral variables onto distances in attribute space will be done to further explore a "force" hypothesis, and canonical analysis will be employed to ascertain the "fit" of the two spaces.

¹¹ R. J. Rummel, "A Field Theory of Social Action with Application to Conflict Within Nations," General Systems, Vol. X, 1965.

1950 Dyadic Variable List

System and Domain	Variable No.	Variable Code	Variable	IBM Card	
				Set No.	Columns

I BEHAVIORAL

A. Official Collaboration

1.	AID: economic aid	A→B ¹²		1	7-11
2.	R-AID: relative ¹³ economic aid	A→B		1	17-21
3.	TREATY: treaties	A↔B		1	27-31
4.	R-TRTY: relative treaties	A↔B		1	37-41
5.	VISITS: official visits	A→B		1	47-51
6.	CONFER: co-participation in international conferences	A↔B		1	57-61

B. Communications

7.	MAIL: mail	A→B		1	67-71
8.	R-MAIL: relative mail	A→B		2	7-11
9.	M/DOMM: mail (A→B) / A's domestic mail			2	17-21
10.	BOOKS: export of books and magazines	A→B		2	27-31
11.	R-BOOK: relative export of books and magazines	A→B		2	37-41
12.	TRANSL: book translations ¹⁴	A of B		2	47-51
13.	R-TRAN: relative book translations ¹⁴	A of B		2	57-61
14.	(Undefined)			2	67-71

¹²The arrow indicates the direction of the relationship between nation A and nation B that is evaluated on the variable. Thus, A→B for variable 1 means that data will be collected on the amount of economic aid that A has given to B. Symmetrical relationships, such as trade, are indicated by A↔B.

¹³All "relative" variables are calculated thusly:

$$\frac{x \text{ A} \rightarrow \text{B} \text{ (or A} \leftrightarrow \text{B)}}{\text{all } x \text{ of A}}$$

where x refers to the relationship, such as economic aid, being considered. If all x of A = 0, then the ratio = 0.

¹⁴Treated as non-applicable to pairs of nations with predominantly the same language.

D. International Politics

29.	MILTTR: military treaties	A↔B	5	7-11
30.	R-MILT: relative military treaties	A↔B	5	17-21
31.	WD-UN: weighted distance ¹⁹	on major rotated dimensions of UN voting, A↔B	5	27-31
32.	D-UN: unweighted distance ²⁰	on major rotated dimensions of UN voting, A↔B	5	37-41

¹⁵These factor scores are derived from a factor analysis of foreign conflict data coded from the daily New York Times. The sample for this analysis is not restricted to the random and selected samples of the dyadic study, but includes all dyads evidencing any conflict behavior recorded in the NYT.

¹⁶Measured as the sum (with all signs reversed for scores on a factor with all high negative loadings) of factor scores on the five major conflict factors.

¹⁷The dyad has no standardized factor score greater or equal to an absolute value of 1.50 on any conflict dimension equals 0; otherwise equals 1.

¹⁸Conflict is measured as in footnote 17. If B is in conflict with allie of A, or A is in conflict with allie of B, or A is in conflict with B, then dyad is given a 1; otherwise 0.

¹⁹Distance on major dimensions together =

$$\sqrt{\sum_{i=1}^p [a_i (A_i - B_i)]^2}$$

where i = a particular dimension, p = the number of major dimensions being considered, a = the percent of variance of UN voting accounted for by a dimension, and $A_i - B_i$ = the difference in factor scores of A and B on a dimension. This formula is for the Euclidean distance in p dimensional space, when each dimension is weighted for importance.

²⁰The dimension i of footnote 6 = 1 for all i dimensions.

33. D-UNF1:	distance ²¹ on first rotated dimension of UN voting, A↔B	5	47-51
34. D-UNF2:	distance ²¹ on second rotated dimension of UN voting, A↔B	5	57-61
35. D-UNF3:	distance ²¹ on third rotated dimension of UN voting, A↔B	5	67-71
36. MILAID:	military aid A↔B	6	7-11
37. R-MLAD:	relative military aid A→B	6	17-21
E. Mobility			
38. TOURIS:	tourists A→B	6	27-31
39. R-TOUR:	relative tourists A→B	6	37-41
40. T/POPU:	tourists (A→B) / A's population	6	47-51
41. EMIGRA:	emigrants A→B	6	57-61
42. R-EMIG:	relative emigrants A→B	6	67-71
43. E/POPU:	emigrants (A→B) / A's population	7	7-11
44. STUDNT:	students A→B	7	17-21
45. R-STUD:	relative students A→B	7	27-31
F. Trade			
46. EXPORT:	exports A→B	7	37-41
47. R-EXPT:	relative exports A→B	7	47-51
48. E/GNP:	exports (A→B) / A's GNP	7	57-61
49. C/EXP:	largest commodity export A→B / A's exports A→B	7	67-71
G. Cooperation			
50. IGO:	intergovernmental organizations (IGO) of which A and B are both members A↔B	8	7-11
51. R-IGO:	relative IGO A↔B	8	17-21
52. NGO:	non-governmental international organizations (NGO) of which A and B are both members A↔B	8	27-31
53. R-NGO:	relative NGO A↔B	8	37-41
54. N-IGO:	IGO A↔B / common membership of A	8	47-51
55. N-NGO:	NGO A↔B / " " "	8	57-61
56.	(undefined)	8	67-71
57.	"	9	7-11
58. ENBLEG:	embassy or legation A→B = 1, none = 0	9	17-21
59. R-FNB:	relative diplomatic representation A→B	9	27-31
60.	(undefined)	9	37-41
61.	"	9	47-51
H. Communication System			
62. TELTRN:	telephone cable terminals A↔B	10	7-11
63. TELCHN:	telephone communication linkage	10	17-21
64.	(undefined)	10	27-31
65.	"	10	37-41

²¹Calculated thusly: $\sqrt{(A's \text{ factor score} - B's \text{ factor score})^2}$

I. Historical Influences

66. WAROPP:	time since opposite sides of a war ²²	A↔B	10	47-51
67. WARSAM:	time since on same sides of a war ²²	A↔B	10	57-61
68. LOSTER:	A has lost, and not regained, territory to B since 1900 = 1; no = 0		10	67-71
69. DEPEND:	A once a colony, territory or part of homeland of B ²³		11	7-11
70. INDEP:	Independence of A and B predates 1946 = 1, no = 0		11	17-21

J. Bloc Politics

71. COMBLC:	common bloc ²⁴ membership	A↔B = 2; different = 1; opposing = 0	11	27-31
72. COMPOS:	bloc position ²⁵ index	A↔B	11	37-41
73. ALLIAN:	military alliance	A↔B = 1; no = 0	11	47-51

II. ATTRIBUTE SYSTEM

K. Basic Characteristics²⁶

74. ENCONS:	energy consumption per capita of A		12	7-11
75. N.I.:	national income of A		12	17-21
76. FREED:	freedom of opposition in A		12	27-31
77. CATHOL:	proportion of Roman Catholics in A		12	37-41
78. THREAT:	threats of A (tentative)		12	47-51
79. DENSIT:	density in A		12	57-61
80. DOMKIL:	domestic killed in A		12	67-71

²²Rating: pre-1900 or never = 0; 1901-1910 = 1, 1911-1920 = 2, 1921-1930 = 4, 1931-1940 = 8, 1941-1950 = 16, 1951-1960 = 32, 1961- = 64.

²³Refer to footnote 22.

²⁴Blocs considered are Communist, Neutral, and Western.

²⁵Bloc position A↔B measured as absolute difference of position on following scale:

1	2	3	6	7
USA	non-USA	neutral	non-USSR	USSR
	Western bloc	bloc	Communist	
	member	member	bloc member	

²⁶These are the basic indicators that index the major dimensions of covariation among nations. They were derived from a factor analysis of 236 variables for 82 nations on 1955 data. See R. J. Rummel, Dimensions of Nations, forthcoming; or R. J. Rummel, "Some Attributes and Behavioral Patterns of Nations," Journal of Peace Research No. 2, 1967.

L. Distances

81. D-ECON:	distance ²⁷ in economic development	A↔B	13	7-11
82. D-POWR:	distance ²⁷ in power bases	A↔B	13	17-21
83. D-POLI:	distance ²⁷ in political system	A↔B	13	27-31
84. D-CATH:	distance ²⁷ in Catholic culture	A↔B	13	37-41
85. D-FCON:	distance ²⁷ in foreign conflict	A↔B	13	47-51
86. D-DENS:	distance ²⁷ in density	A↔B	13	57-61
87. D-DCON:	distance ²⁷ in domestic conflict	A↔B	13	67-71
88. D-TOTL:	distance ²⁸ on all major dimensions	A↔B	14	7-11
89. D-RANK:	social rank distance ²⁹	A↔B	14	17-21
90. D-RUSS:	Russett's distances ³⁰	A↔B	14	27-31
91. (undefined)			14	37-41
92. "			14	47-51
93. "			14	57-61
94. "			14	67-71
95. "			14	7-11
96. P1 + P2:	joint power potential ³¹	A↔B	14	17-21

M. Geographic

97. D-TCEO:	global distance between capitols	A↔B	15	27-31
98. D-TGEO:	global distance between territorial borders	A↔B	15	37-41
99. PANAM:	Pan Am ticket price between capitols	A↔B	15	47-51
100. (undefined)			15	57-61
101. CONTIG:	contiguous territory and border easy to cross	A↔B = 2; militarily difficult to cross by land = 1; non-contiguous = 0	15	67-71

²⁷See footnote 21. The dimensions on which these distances are calculated are derived from the 236 variable analysis mentioned in footnote 26.

²⁸See footnote 20. See footnote 26 for source.

²⁹Calculated in the space of economic development (wealth) and power bases (size) dimensions. Prestige is assumed to be mainly indexed by these two dimensions.

³⁰Distances between nations computed by Bruce Russett on the four main dimensions (excluding size) to emerge from a factor analysis of Russett, et al, World Handbook of Social and Political Indicators, 1965. See Bruce Russett, International Regions and the International System, Rand McNally, 1967.

³¹Calculated by formula:

$$(\text{national income of A}) + (\text{national income of B})$$

This gives a measure of the ability of two nations to span distance between them and thus to interact.

Population Characteristics

102. ANCEST:	ancestry proportion index ³²	A↔B	16	7-11
103. RACE:	race proportion index ³²	A↔B	16	17-21
104. RELIG:	religion proportion index ³²	A↔B	16	27-31
105. LANGU:	language proportion index ³²	A↔B	16	37-41

III ERROR

106. EXP-IM:	absolute difference in export data A→B and import data ³³	B←A	17	7-11
107. EMBA+L:	embassy and legations in A + B ³⁴		17	17-21
108. ENGA+B:	energy consumption per capita	A + B ³⁵	17	27-31
109. CENA+B:	censorship	A + B ³⁶	17	37-41
110. MISSDA:	missing data ³⁷		17	47-51
111. RANNU:	random number ³⁸		17	57-61
112. E-1/TR	variable 106 / trade average (A→B) + (B→A) ³⁹		17	67-71

³²Calculated as the vector product, $V_A^* V_B$, where the asterisk means vector transposed. The elements of V_A and V_B are the proportions of the population of each nationality (race, religion, language) that A and B have in common. Thus, the higher the value of the resulting scalar, $V_A^* V_B$, for A↔B, the more in common A and B are on these population characteristics.

³³An index to the reliability of trade data, and possibly of other interaction data as well.

³⁴An index of the world interest in the pair of nations, and thus of the possibility that data, such as conflict and collaboration, might be omitted from the sources.

³⁵An index to the joint economic development of two nations and thus of the development of their statistical agencies. This development has some bearing on the quality of the data published.

³⁶Censorship is rated as 0 = complete or fairly complete censorship; 1 = some news censorship, 2 = no censorship, other than usual laws about libel and the controlling of news of a national security value.

³⁷The frequency of missing data for the dyad A→B or A↔B for all variables included in the analysis.

³⁸When included in the factor analyses, it will help indicate at what point the variance on a factor may be due to chance concomitance.

³⁹This norms variable 106 by the total amount of trade between two nations.

2.2 Dyadic Random Sample. All 72 sovereign nations in 1950 (see Section 1.2) were numbered. Eighty pairs (dyads) of nations then were selected by consecutive numbers in a random table (the page of random numbers and the first number used were selected randomly as well).

As with the 1955 and 1963 dyadic random samples, three dyads, US-USSR, US-France, and USSR-China were added to the sample. Their theoretical value is believed to outweigh the consequent slight loss of randomness.

Since two directions of relationship $A \rightarrow B$ and $B \rightarrow A$ are considered for each dyad $A - B$, the sample of 83 dyads becomes a sample of 166 dyadic relations out of a population of 2,556 such relationships for 1950. Degrees of freedom employed in statistical tests must be computed, however, on $N = 83$.

The selection procedure resulted in all except four of the 72 nations being included in at least one dyad. Those not included are Jordan, North Korea, Panama, and the Union of South Africa.

The random sample of 166 dyads is as follows:

1950 Dyadic Random Sample

2.3 Dyadic Selected Sample. The random sample was chosen on the basis of a random number table, as described in the above list, so that inferences could be made from the sample to all dyadic relations for the years of interest. The following selected list of dyads represents all the paired relationships between nations, chosen to represent the high, middle, and low values of countries on the major factors emerging from 236 variable by 82 nations³² and 94 variable by 82 nation factor analyses.³³ Each of the high, middle, and low positions on each dimension is represented by at least two nations. In order to index the major cultural and regional groupings of nations, Cattell's³⁴ and Russett's³⁵ studies were used to identify individual countries that were central to a cultural or regional cluster of nations.

The selected list of dyads insures that the full scope of differences and similarities among nations will be analyzed as they relate to interaction between nations. Since the selected sample is non-random, it does not allow for generalization to the universe. The results of the factor analysis of the selected sample may be used, however, in prediction studies of behavior, such as cooperation or conflict, where the interest is centered on regression coefficients. (In the regression model the predictors may be selected to index their full range of values.)

The dyadic selected sample for 1950 is the same as that analyzed in 1955 and 1963, although, of course, the random samples all differ. Having a constant dyadic selected sample across the three years enables a measurement of change in dyadic behavior.

The selected sample is as follows:
