SECTION I
GENERAL

1. Purpose and Scope. This TOP describes test procedures for evaluating the operational and performance characteristics of flamethrower service units. Equipment and test phases include the generation and flamethrower charging of compressed air and a thickened fuel (jellied gasoline).

2. Background. The flamethrower service unit is portable or vehicle mounted and supplies compressed air to portable and mechanized flamethrowers. It has provisions for mixing thickened fuel and transferring the fuel to flame-throwers, flame field expedients, and when necessary firebombs. Components of the service unit are interconnected to perform interrelated functions of mixing and transporting fuel, producing pressurized air, preheating fuel, and generating and controlling it's own power.

3. Equipment and Facilities. The specific requirements are described in the publications in Section II below.

SECTION III SUPPLEMENTARY INSTRUCTIONS

5. Functional Suitability.

a. Objective. To determine that the test item has the functional capability and suitability to manufacture and dispense compressed air and thickened fuel in the field as described in applicable MN or other requirement documents.

b. Method. The test item is assembled and operated in accordance with technical manuals and other applicable equipment specifications. Times required to fill various flamethrower or storage vessels (portable or mechanized) are noted along with difficulties encountered. Various types of vehicles are used to transport the test item cross-country per TOP/MTP 2-3-505 at specified intervals of operation (i.e., after 50 hours of stationary operation). A specified percentage of operations are performed under cover of darkness using light inherent to the test item. The adequacy of mixing, preheating, and dispensing of thickened fuel is determined by noting times required to fill various storage vessels and the use of the fuel in flamethrower operations.

c. Data Required.

- (1) Nomenclature of the test item.
- (2) Times required for assembly and disassembly.
- (3) Difficulties encountered during operation.
- (4) Deficiencies and shortcomings observed.
- (5) Personnel type and number required to operate the test item.
- (6) Remarks concerning overall operation of the test item.

d. Analytical Plan. Test results are evaluated to determine whether or not the test item meets the stated performance requirements.

Recommended changes to this publication should be forwarded to Commanding General, US Army Test and Evaluation Command, ATTN: AMSTE-TP Aberdeen Proving Ground, Maryland 21005. Technical information related to this publication may be obtained from the preparing activity, President, US Army Armor and Engineer Board, ATTN: STEBB-MO, Fort Knox, Kentucky 40121. Additional copies of this document are available from the Defense Documentation Center, Cameron Station, Alexandria, Virginia 22314. This document is identified by the accession number (AD No) printed on the first page.
