20. ABSTRACT (Continue on reverse side if necessary and identify by block number)

The Pulse Mode Performance Model computer program has been developed to provide an analytical tool for accurately predicting the pulse-mode performance of attitude control rocket engines. Specifically, the principal performance parameters predicted are propellant flows, total impulse and mean specific impulse for individual pulses and for overall mission duty cycles. The pulse mode operation is applicable for pulse widths which are long enough for thrust to approach its steady-state level and for pulse rates which are

UNCLASSIFIED

SECURITY CLASSIFICATION OF THIS PAGE (When Data Entered)

not so rapid as to prevent thrust from decaying below 10 percent of its steady-state level between pulses.

This volume of the Users Guide, along with three others, and the final report (AFRPL-TR-72-16), contains sufficient descriptive information and instructions for knowledgeable people to use the Pulse Mode Performance Model computer program with a minimum of difficulty. The first volume describes the computer program, its required input data, special operating instructions and output. Volume II contains a listing of the source program coding (excluding subprogram TDK), of card changes for special desk set ups and of the input data used in the example case. Volume III contains the complete printout of the example case. The last volume (IV) is a listing of the TDK source program coding.

FOREWORD

This computer program documentation was prepared by the Advanced Programs division of Rocketdyne, a division of North American Rockwell Corporation, 6633 Canoga Avenue, Canoga Park, California. This document was prepared in accordance with and in partial fulfillment of Contract F04611-70-C-0074, Pulse Mode Performance Model (Project No. 3058, Program Element No. 6.23.02F), during the period 1 July 1970 to 21 September 1972. This contract was administrered by the Air Force Rocket Propulsion Laboratory, Edwards, California. The Air Force Project Officer was Capt. S. Rosen, who replaced Dr. Clark Hawk. Initially Mr. T. A. Coultas was the Rocketdyne Program Manager, with Mr. L. P. Combs replacing him just prior to the program extension.
