\* In column 18 only, code numbers refer to the Date Letters under to Food Stuff.

Column Number

(0' code in any column indicates subject is Not Applicable)

## GUIDE TO FOOD HABITS TABLES

**GENERAL** -- The Food Habits Tables present specific information on individual items in the diet which are of significance in the total cultural context. An effort has been made to identify precisely each food by source (plant, animal, or other), foodstuff, and prepared dish, and to indicate each category of information as exactly as the sources permit. In many cases the information has been absent, insufficient, or doubtful. In these cases every effort has been made to secure confirming data.

Each section of the Tables represents an ethnic or culture group. The first line in each section (see Sample Table with Code Key in Place) contains the following information:

**OWC** -- This consists of two letters and two primary numerical digits, corresponding to a listing in the Outline of World Cultures. If the code designated in the OWC contains only one numerical digit (for example, AR5 Garo), a zero has been entered for the first digit, thus: AR05. In many cases the culture breakdown provided by the OWC has not been detailed enough for this project. A subgroup number has therefore been assigned when the data have been drawn from a specific section of the total group subsumed by the OWC code; this section may or may not be one of those listed in the OWC. Also, a subgroup number has been assigned when significant intra-cultural dietary differences are noted which can be definitely identified with divisions of the total group designated by the OWC code number. Reference should be made to the Food Habits Cultural Summaries for precise identification.

**NATION** -- The present-day major political entity: a country, colony, dominion, etc. An effort has been made to obtain the most recent

names from maps, atlases, or other sources though political events in some cases have changed names of countries subsequent to our work on the area.

**LOCATION** -- The closest degrees of latitude and longitude to the center of the area inhabited by the group are given.

**TOTAL POPULATION** -- The population figure is given for the group designated by the subgroup number; if no subgroup is designated, this figure refers to the entire OWC group population. The date of the census or estimate is also given when available.

**MAJOR CLASS** -- The table for each society is divided into six major classes, indicated by a special line entry prefaced with the initials MC. The six groups are as follows:

1. **Primary** -- This is a basic resource of a society, for example: specific cereals, roots and tubers, meats, etc. Most plant foods which are classifiable in this category are of a starchy nature.
2. **Sub-Primary** -- Specific items which do not in themselves constitute a primary as defined above but that in combinations do constitute one of the classes of primaries. For example: hunting and gathering peoples often use the meat of many different animals, no one of which could by itself be considered as the primary. However, taken collectively, the meat of various animals could be considered to be a primary resource. In such case the items entered on the Data Sheets may only represent a sampling of the total number of animals or plants collected, but the ones which apparently contribute the greatest

amount to the diet have been recorded. Sub-primaries are always given in relation to a specifically cited generalized primary, e.g., cereals, wild game, tubers, etc.

3. **Secondary** -- Important nonprimary foods, such as squash, tomato, etc. If the information does not clearly indicate the classification of an item, it has been categorized as "Secondary."
4. **Complement** -- Foods such as condiments, relishes, sauces, etc. which are eaten along with primary, subprimary, or secondary foods.
5. **Rejected** -- Items which are emphatically and specifically rejected by the OWC group as a whole. Those items which may occur in the environment and are considered as food among OWC groups other than the one under immediate investigation have not been checked for "Rejected" merely because they are not utilized, but only if they are explicitly proscribed with respect to the diet of the OWC group being described. A rejected item will quite likely have positive information in the numerical coded columns 2-4, 6-8, and 22.
6. **Other** -- This category is for items which may be consumed in small quantities or be of little nutritional significance, but have a high value in the total cultural context.

**BASIC LINE ENTRIES** -- The basic data on each food item is found in a double line entry as follows.

**SERIAL** -- A serial number is assigned to each food item. These numbers were, in general, assigned after the data was completed for each culture, so that a continuous series of numbers have been used for each general type of Food Source, according to five groupings in the following order: Domestic Animals, Domestic Plants, Wild

Animals, Wild Plants, and Other. This sequence has been interrupted in a few cases by later entries. REFERENCE -- The reference number appears on the extreme left of the bottom of the double line. The number refers to citations in the Cultural Summaries.

BINOMIAL -- This is the scientific name for the plant or animal source of food, consisting of two parts. The first refers to the genus and the second to the species. These have been recorded using as much as possible the preferred or standard taxonomy, with the genus name on the top line and the species on the bottom. If the genus is known but the species is not, SP has been recorded for the species, for example: PHASEOLUS/SP for an unknown species of common bean. The botanical or zoological authority cited as the originator of the binomial nomenclature given has been recorded only on the original data sheets. For further details of problems of scientific identification, see section on Nomenclature.

COMMON NAME: SOURCE -- The American-English usage has been recorded for the plant or animal which is identified precisely by the binomial. Merriam-Webster's New International Unabridged Dictionary, second edition, serves as the authority on usage and spelling of common names; any common name listed in the vocabulary section of this dictionary and which is not designated as a foreign term has been considered to be of American-English usage. If no American-English common name was encountered, the common name in whatever major language other than English that seems most appropriate is recorded. In most of South America this will be Spanish; in some parts of Africa, French or German may be most appropriate if the flora and fauna are so identified. In no case are special orthographic symbols or diacritical marks entered. The more general term is entered first, then any

descriptive or defining term or terms necessary to avoid confusing the item with others similarly named. For example: POTATO, WHITE not WHITE POTATO. If the degree of maturity of an animal is of major significance, MATURE or IMMATURE has been recorded as a modifier of the Common Name, Source in the same manner as any other descriptor, thus: SHEEP, IMMATURE for what we are accustomed to designate as "lamb." If two or more descriptive terms are used, each has been separated from that preceding it by a comma, thus: GOAT, IMMATURE, MALE. If the degree of maturity of a plant is significant, it has been recorded as indicated below under Common Name, Foodstuff. If more than one common name or names of equal significance exist, an equal symbol = has been entered, then the second or alternative name. Additional names may be entered, separated from the name preceding it with an equal symbol = .

NATIVE NAME: SOURCE -- On the bottom of the double line beneath the common name the vernacular name of the relevant OWC group for the plant, animal or other material has been recorded, corresponding to the American-English usage for Common Name, Source, following the procedures outlined under Common Name, Source in using only the letters of the English alphabet.

COMMON NAME: FOODSTUFF -- That part or portion of the plant, animal or other material identified in Common Name, Source which is actually used as a dietary item is recorded. A separate line is used for the raw Foodstuff and for any major derivatives of that Foodstuff which are further processed to prepare important dishes in the diet. The raw Foodstuff has been recorded as the common name for the part of the plant or animal used. For example: SEED for the whole grain of wheat used in preparing the dish FLOUR (if it is so used). If this dish

(FLOUR) is then used to prepare other dishes, a separate line entry is then made for FLOUR as a separate Foodstuff, recording the raw Foodstuff, then the derivative dish which is treated as a new Foodstuff in the preparation of additional dishes. Thus: SEED\*FLOUR would indicate that flour is treated as a separate Foodstuff, but that the flour is derived from seed (of the wheat which would appear on both lines under COMMON NAME: SOURCE), and that another line is used for SEED. The asterisk \* in all cases indicates that the term to its right is derived from that to its left. As an extension, if the prepared dish made from the derivative Foodstuff is further treated as a Foodstuff to prepare other dishes, it would also be entered on a separate line in a similar manner. Thus, if bread is made from flour and further treated to prepare bread pudding, a line would be recorded for the Foodstuff FLOUR\*BREAD in addition to one for the Foodstuff SEED\*FLOUR and one for SEED.

Below is a glossary of commonly used terms for foodstuffs.

"Whole" has been recorded if the entire plant or animal is actually used in the diet. In the case of plants, WHOLE is used if the information specifically states or merely implies that the whole plant is eaten; in the case of animals, WHOLE has been used only if the data is quite unambiguous. For example: "They eat the entire beast" or "These people consume every part of the animal which can possibly be digested."

"Meat" has been recorded in the case of animals if "whole" may be implied but is not specifically stated, or if the information is sufficiently imprecise so that it is possible that only muscle is implied. For example: "They eat caribou, rattiesnakes and other animals."

"Muscle" has been recorded if the information distinctly indicates that organs, bones, or

other nonmuscular parts are not included as part of the Foodstuff item to which the line entry refers. The term "Muscle" may include fat, skin, or other parts which are merely incidental to the muscle. Other animal parts are recorded by the same terms used in the source consulted: "Blood," "Kidney," "Bone," etc. Terms for any plant part which are easily confused with terms used for animals are not used, for example: "Meat," "Flesh," "Milk."

"Seed" is used for any whole nut or grain, including the outer hull.

"Kernel" applies to a hulled grain or shelled nut, that is, what is commonly termed "nutmeat."

"Juice" refers to the liquid obtained from any part of a plant. "Juice" is used only in conjunction with the part of the plant from which it is derived, with first the part, then a comma, and finally the term JUICE recorded. Thus: FRUIT, JUICE is recorded for what we commonly refer to as orange juice; SEED, JUICE is recorded for "coconut milk"; KERNEL, JUICE for the liquid extracted from the "meat" of the coconut.

Maturity applies if the degree of maturity of a plant or part thereof is of major significance. "Mature," "Immature," or "Overripe" are used as modifiers of the Foodstuff. For example: FRUIT, MATURE. Such terms as "green" or other terms with ambiguous meaning are not used. In the case of animals, the state of maturity has been recorded as indicated under COMMON NAME: SOURCE.

NATIVE NAME: FOODSTUFF -- The vernacular for foodstuff of the relevant OWC group which corresponds to that recorded in English under COMMON NAME: FOODSTUFF. Only letters of the English alphabet are used.

COMMON NAME: DISH -- The American-English usage for the product resulting from the method of preparation outlined in columns 12-15 is

recorded here. In many cases this term may be one used by the author in a rather subjective fashion. A "Dish" may be a product which is not consumed in the intermediate form described, i. e., flour, preserved breadfruit, etc. In this case, the coded data on use will indicate "Not Applicable."

NATIVE NAME: DISH -- The vernacular of the relevant OWC group for the product resulting from the method of preparation outlined in columns 12 - 15 and corresponding to the term recorded in COMMON NAME: DISH.

NUMERICAL CODED COLUMNS 1 - 29 -- GENERAL --

In these sections, data are recorded in a coded form. A special code-reading template has been designed to facilitate reading these data. In columns 2 - 29, category 0 - (No Info) may be checked for lack of data in the source of reference; no attempt has been made to interpret the data to fit categories if the sources provide insufficient information. Category 9 - (Not Applicable) has been used in the case of Foodstuffs for which only certain types of information are pertinent (see above). For example, if Major Class is category 5. "Rejected," sections 5, 9 through 21, and 23 through 29 will all be category 9 - (Not Applicable). In all sections in which the category "Other" appears, this category has been used only when the data cannot be classified in any of the more precisely defined categories which precede it. Categories which are self evident are not further defined below.

COLUMN 1. MAJOR CLASS -- This column contains only the symbols "F" (Foodstuff) "S" (Source) "D" (Dish) to indicate the form of the food item which is classified under the Major Class heading (see above). "F" is the standard designation though in particular cases either "D" or "S" is used.

COLUMN 2. DISTRIBUTION (BY LOCALITY OF FOODSTUFF) -- Recorded in this column is positive information

concerning the geographic aspect of the accessibility of an item in season to all persons within the OWC group. This section has been recorded in conjunction with column 3. PLENTIFULNESS OF FOODSTUFF.

1. Universally Available -- Accessible to all persons regardless of their locale or the source of supply. If an item is gathered by some, raised by others, and imported by still others, it would be checked for this category if it is accessible by some means to all in season.
2. Generally Available -- An item which is accessible to most, but not all, members of the OWC group, under conditions described in category 1 above.
3. Locally Available -- An item which may be accessible to all those persons of the described society who live within a certain region or community only.
4. Unavailable -- This category is used to classify items which have been recorded, in spite of their present absence from the diet because they are greatly esteemed or desired; this may include items formerly prevalent and no longer accessible, or items which have never been widely used but are nevertheless coveted (e. g., canned goods).

COLUMN 3. QUANTITY (PLENTIFULNESS OF FOODSTUFF) --

All categories in column 3 refer to the local situation in season as indicated in column 2. DISTRIBUTION BY LOCALITY OF FOODSTUFF. If category 3. "Locally Available" is checked in column 2, then the data recorded in column 3 will reflect the local plentifulness. The Foodstuff may be locally abundant even though it is scarce for the society as a whole; it is the local abundance that is recorded, not the general scarcity.

1. Surplus -- This category is used for situations in which the item occurs in such quantity that it cannot be consumed by that part of the OWC group (as indicated in column 2) which has access to it.

- 2. Abundant -- This is used for a very good supply which may or may not be entirely consumed.
- 6. Non-existent -- Recorded here are items such as those described in column 2, category 4.

COLUMN 4. PROCUREMENT (OF FOODSTUFF) --

This column refers to acquisitions of items by the OWC group as a whole.

- 1. Gather -- This includes most use of non-domesticated plants and animals; collecting plants, their products, and small animals; hunting, fishing, etc.
- 2. Raise -- This includes most domesticated plants and animals which are grown, bred, herded, etc.
- 3. Import -- This includes acquisition by any means from a source outside the OWC group under immediate investigation: trade, barter, gift, etc.
- 4., 5., 6., & 7. For any combination of the preceding categories.

COLUMN 5. PRESTIGE VALUE (OF FOODSTUFF) --

This has been recorded according to explicit statements only, not by implied desirability.

- 5. Variable -- Variable has been recorded only in the case of established social classes, not individual values.
- 6. No distinction -- This category has been used only if the reference explicitly states that no prestige distinction is recognized; if no comment regarding prestige is made, category 0 (No Info) is used.

COLUMNS 6 & 7. CHARACTER (OF FOODSTUFF)

(A & B) -- Only a single category in one of these two columns is used, the other of the two columns is recorded as "N.A." Some specific food items and the categories in which they are classified are indicated below. The classification is based on a combination of botanical and nutritional characteristics, with the nutritional factors given first consideration.

A-1 Cereals -- Grassy plants producing starchy

seeds usually suitable for the production of meal or flour; this category includes the pseudo-cereals which are not true grasses but produce seeds of a similar nature. Examples: wheat (emmer, spelt, etc.), barley, oats, millet, rice, rye, buckwheat, maize, sorghum (grain), quinoa, amaranth, chenopodium, ragweed, Job's tears, chia, wild rice.

A-2 Roots and Misc. Starch -- Most high-carbohydrate roots and vegetables. Examples: Arrowroot, manioc (cassava), potatoes, sago, taro, yam, sweet potato, dasheen, yautia, cycad nuts.

A-3 Fruits -- Both high and low carbohydrate fruits are included: Examples: banana, plantain, date, fig, grape, pandanus, apple, berries, plum, papaya, citrus fruits, pineapple.

A-4 Sweets -- Misc. products primarily consumed for sugar content. Examples: cane and beet sugars, honey, nectar, saps, sweet gums, maple syrup, sorghum syrup, molasses (treacle).

A-5 Legumes -- All beans and bean products such as bean curd, peas, soy beans, lentils, chickpeas.

A-6 Nuts -- Includes most seeds not categorized as cereals, pseudo-cereals, or legumes. Examples: almonds, breadfruit nuts, palm nuts, canarium nuts, chestnuts, coconuts, pumpkin seeds, macadamia nuts, quondong, sesame seeds, squash seeds, Tahitian chestnuts, walnuts, sunflower seeds, cashew nuts, Brazil nuts (castaña), hickory nuts, acorn, pistachio, pine nuts (pignolia and pignon), pilli, peanuts.

A-7 Vegetables -- Both high and low carbohydrate vegetables are included. Examples: fungus (mushrooms), algae (seaweed), onions, leaves and stems, pods, succulent leaves, pumpkins, squash, turnips, beets, carrots, tomatoes, radish, salsify, bamboo shoots.

A-8 Meat -- Domestic and wild animals of all kinds, birds and fowl, grubs and insects, mammals including sea mammals, amphibians, reptiles, offal.

B-1 Fish -- Large and small fish and salt water fish, crustaceans, molluscs, all other marine invertebrates.

B-2 Milk -- Milk and milk products from all animal sources, cheese, curds, koumiss, sweet and sour milk, ice cream.

B-3 Fats, visible animal -- Animal fats other than those eaten as incidental to meat. Examples: lard, suet, tallow, butter, fat from fish.

B-4 Fats, visible vegetable -- Vegetable fats other than those eaten as incidental to the plant or vegetable from which they are derived. Examples: cotton-seed oil, olive oil, cocoa butter, sesame seed oil, shea butter.

B-5 Eggs -- From any animal source when treated as a separate item: bird eggs (wild and domestic), fish eggs (roe, caviar), turtle eggs, insect eggs.

B-8 Other -- Those items not classifiable in any of the above categories. Examples: clay, minerals (salt, feces).

COLUMN 8. OTHER USES (OF FOODSTUFF) --

This section is for additional data on items which are ingested both as a food and for some other purpose; if there is a substance of importance which is not used as a food but is of significance as a narcotic or other ingested material, it is recorded only in the Food Habits Cultural Summaries.

- 1. Medicinal -- items which are taken for their therapeutic effect, as considered from the viewpoint of members of the OWC group under consideration.
- 2. Ritual -- items utilized in conjunction with precisely prescribed behavior, usually repetitive and of symbolic significance.
- 3. Stimulant/Depressive -- an item consumed in order to produce a temporary increase or decrease in physiological or mental activity by either direct or indirect means.
- 4., 5., 6., 7. -- These categories are to indicate various combinations of the preceding categories of this section.

**COLUMN 9. COLOR (OF FOODSTUFF)** -- This has been recorded according to the observer's report only when the information is specified. The color refers primarily to the portion of the source or foodstuff consumed, i.e., to the color of the interior of a fruit rather than the skin or peel.

5. Whitish -- This category includes silver, light gray, and items termed clear or colorless.
7. Black -- This category includes dark gray or other extremely dark colors.
8. Other (or varied). This category is used for either variegated individual items or items that vary from specimen to specimen.

**COLUMN 10. TOXICITY (OF FOODSTUFF)** -- This column accounts for the dietary use of items which are considered to be toxic either from the viewpoint of members of the OWC group being investigated or from that of the observer or Western science and medicine.

1. Rejected -- Foodstuffs which are generally rejected because of their toxicity.
2. Removed -- The toxic Foodstuff is rendered harmless by removal of the toxic agent by processing before the Foodstuff is consumed.
3. Counteracted -- Other dietary items act as agents to prevent poisoning when consumed in combination with the toxic Foodstuff.
4. Adapted to -- Individuals can or do become habituated to mildly poisonous dietary items.
5. Avoided periodically -- Items which may be considered toxic only during certain periods of the year are avoided at those times although the same items are eaten at other periods when they may be considered non-toxic.

**COLUMN 11. ALTERNATE PREPARATION (NUMBER OF OTHER METHODS OF PREPARATION OF FOODSTUFF)** --

This column indicates the number of methods used to prepare dishes from the Foodstuff mentioned above, in addition to the main method of preparation outlined in columns 12-15.

1. None -- The method outlined in columns 12 - 15 is the only method. The method of preparation may be Not Applicable in columns 12 - 15 which indicates the foodstuff is always eaten raw.
2. Raw -- The Foodstuff is eaten raw, in addition to being prepared as outlined in columns 12 - 15. Category 1 (above) will be used for foodstuffs always eaten raw.
3. Few -- Any number of methods specified as five or less, or indicated by such terms as "not many," "only a couple," "some," etc. If the data indicate that some other methods exist but do not imply that there are many, it is recorded here as "Few."
4. Many -- Six or more methods other than that outlined in columns 12 - 15; "many," "various," "numerous," "lots," etc.
5. Raw - few -- The Foodstuff is eaten raw and also is prepared in a few (five or less) ways other than the one outlined in columns 12 - 15.
6. Raw - many -- The Foodstuff is eaten raw and also prepared in many (six or more) ways other than the one outlined in columns 12 - 15.

**COLUMNS 12-15. MAIN (METHOD OF) PREPARATION (A, B, C, & D)** -- These columns are used

for outlining one method of preparation of the named Foodstuff for use in the Dish named at the bottom of the sheet. The existence of additional methods will be indicated in column 10. NUMBER OF OTHER METHODS. If there are fewer than four steps in the preparation, the steps applicable are recorded in the columns farthest to the right; if there is one step only it is recorded in column 15 and columns 12, 13 and 14 will be "N.A." If the item is eaten raw only, all four sections are "N.A."

1. Cook -- Any process involving the application of heat to the Foodstuff from an outside source, that is, not generated by the Food-

stuff itself. For example: fry, boil, bake, roast, broil, steam, sear, sauté, etc.

2. Wash - Soak -- All processes involving placing or holding the Foodstuff in liquid (brine, vinegar, marinade, water, etc.) for the purpose of leaching, softening, marinating, etc. The mere cleaning of the Foodstuff is not recorded here. Usually the time involved will be less than 24 hours.
3. Age -- Any process involving storage of the Foodstuff for the purpose of allowing chemical change, bacterial action, etc. to occur. This also includes fermenting, pickling, salting, etc. The time involved will usually be over 24 hours.
4. Pound - Separate -- Any process which divides the item under preparation into smaller pieces, removes a portion of it, or otherwise causes a physical change in the original Foodstuff through mechanical means. Hull, peel, skin, pare, pound, bruise, grind, pit, slice, dice, cut up, crush, mince, etc.
5. Mix -- To combine with other ingredients including spices, condiments, etc.
6. Dry -- To remove water or moisture content by any means other than cooking.
7. Cake -- To form one or more individual compact masses from smaller pieces or massed ingredients; patties, noodles, pie crusts, loaves, etc.

**COLUMN 16. PRESERVATION (OF DISH)** -- All following columns refer to the Dish after completion of the stages of preparation outlined in columns 12-15. An exception might be a Foodstuff which had no method of preparation other than that recorded in this section. This column may alternately be coded for preservation of Foodstuff. In that case alphabetic characters will be substituted for numeric.

- 1-A. Drying - Smoking -- Includes removal of moisture content without cooking.

- 2-B. Salting - Sugaring -- No liquid other than that contained in the Dish is added.
- 3-C. Freezing -- Includes refrigeration at above freezing temperatures.
- 4-D. Sealing -- Any means which prevents contact of the Dish with the air.
- 5-E. Pickling -- A liquid, usually a salt solution or vinegar, is added to the Dish.
- 6-F. Cooking -- Includes home and industrial canning methods.
- 7-G. Store Only -- No special processing of the Dish occurs.

COLUMN 17. RECONSTITUTED SHAPE (OF DISH) --

This section has been used mostly for starch products such as bread, noodles, etc. In no case has this section been used for the shape of the Foodstuff itself, but only for the reconstituted Dish. The definition of terms below can only be approximate and in no case apply when the shape is that of a container only.

1. Flat -- Basically of two dimensions, with an outline of any shape. Wafers, flat breads, pizzas, crackers, tortillas, etc.
2. Loaves -- Roughly parallelepiped, such as many packaged bread loaves and common meat loaf in the U.S.; any shape resembling that of a block or brick.
3. Spherical -- Any shape basically of three dimensions with surfaces predominantly curved, not flat; meat balls, stuffed peppers, sausages, etc.
4. Sticks -- Basically one dimensional with a round or indeterminate cross section and not normally flexible; pretzel sticks, bread sticks, etc.
5. Noodles -- Basically one dimensional with a flat cross-section and usually flexible; flat noodles.
6. Varied -- A Dish that is prepared in two or more of the above reconstituted shapes.
8. Other -- Any reconstituted shape which is not classifiable in any of the above categories.

COLUMN 18. OVERALL ACCEPTABILITY (OF DISH) --

This column indicates likes or dislikes of the majority of members of the OWC group for a particular Dish as revealed by explicit statements by the author or by strong circumstantial evidence.

1. Highly Preferred -- This includes delicacies with great cultural value. Usually this category will not apply to primary foods.
2. Preferred -- A Dish which is more highly valued than most, but not necessarily an exclusive favorite. Primary foods which have high positive cultural value may be recorded here.
3. Accepted readily -- Used when there are positive evaluations in the written sources, or if such can be ascertained from the context.
4. Acceptable substitute -- A Dish which is not preferred, but will be consumed in lieu of the preferred Dish when the latter is not available.
5. Disliked -- Used only with expressed disfavor.
6. Variable -- The preference for a Dish may not be the same for different parts of the OWC group, the preference may vary from time to time, or there may be an expressed variance of individual reactions.
7. No preference -- Used when the author explicitly states that the people have no marked liking or dislike for a certain Dish, such as: "They are indifferent" or "They can take it or leave it." If the author makes no comment regarding preferences, than "No Info" has been used.
8. Other -- Used only if a form of preference is expressed by the author which cannot be classified in any of the above categories.

COLUMN 19. GROUP DIFFERENCES (DEMOGRAPHIC DIFFERENTIATION IN USE OF DISH) -- This section refers to clear distinctions which are positively identified by the author.

5. Special groups primarily -- Any special groups not clearly identified as one of the groups indicated in the preceding categories, such as professional groups, kinship groups, etc.
7. No differentiation -- Used if the author explicitly states that no differentiation exists among demographic groups which could be included in the above categories.

COLUMN 20. SEX OF USER (OF DISH) -- Note that exclusive use by one sex or the other is recorded in a manner different from use which is primarily, but not exclusively, limited to one sex.

5. No differentiation -- This category is used only if the author explicitly states that no differentiation exists between the sexes with respect to use of the Dish in question.

COLUMN 21. AGE OF PRINCIPAL USER (OF DISH) -- Although the headings of some of the categories in this section are worded "primarily," the categories should be interpreted to also include exclusive use by any of the relevant age groups.

6. All but infants -- Used only when the author explicitly mentions the fact.
8. No differentiation -- Used only if the author explicitly states that no differentiation exists among age groups which would be included in the above category headings.

COLUMN 22. FOOD TABOOS (ON DISH) -- Used to record as taboo that condition which is claimed as the norm or ideal of the group, not necessarily as actually practiced. If the taboo is broken, the fact will be revealed by column 23. Commentary on taboos are recorded in the Cultural Summaries.

1. Absolute -- A taboo which applies to all individuals in the OWC group all of the time. For example: pork among devout Moslems.
2. All people some time -- Taboos exist which apply universally to the culture at certain times of the year, for example, red meat during lent in a Catholic culture.

3. Some people all time -- Taboos which apply to certain but not all individuals or groups within the culture at all times, for example, totemic animals or plants.
4. Some people some time -- Taboos which apply to certain but not all individuals or groups within the culture during certain but not all times of the year, for example, foods which may be taboo to pregnant women.
5. None -- Used only if the author makes explicit statements relevant to the lack of taboos on a specific Dish.

COLUMN 23. (SEASONAL AND DAILY) FREQUENCY OF USE OF DISH -- If there are special habits associ-

ated with the Dish in question (for example, if it is eaten regularly but only after it has been ritually treated), it will be described in the Cultural Summaries.

1. Regularly in season -- The Dish is consumed at relatively frequent intervals during its cyclical availability, although it may be eaten rarely at other times of the year.
2. Regularly no season -- The Dish is consumed throughout the year at relatively frequent intervals.
3. Occasional in season -- The Dish is consumed at infrequent intervals or irregularly while in season.
5. Emergency only -- This refers to unusual situations, not those which are merely seasonal or cyclical in nature.
6. Special occasion only -- This category does not include Dishes which are eaten regularly and also on feast days, but primarily those which are reserved for such times as feasts, festivals, rituals, etc., including those dishes which will also be checked in column 28. TRAVEL.

COLUMN 24. TASTE (OF DISH) -- This section is recorded on the basis of explicit information provided by the author, and not inferred by the recorder's subjective experience. If certain flavors are described as predominating in the diet which are not adequately included in the categories below, they will be described in the Cultural Summaries.

COLUMN 25. ODOR (OF DISH) -- Recorded in the same manner as column 24. TASTE OF DISH.

COLUMN 26. DIURNAL USE (IN SEASON-DISH) -- This column indicates the significance of a specific Dish as a component of a regular meal or as a between-meal item in the diet.

COLUMN 27. TEXTURE (OF DISH) -- Predominating textures may be recorded in the Cultural Summaries. This column is used for specific texture of the Dish described.

COLUMN 28. TRAVEL USE (DISH) -- Dishes of special importance when individuals or the entire group is in transit.

COLUMN 29. (DISH) USE IN COMPOSITE DISHES -- This column indicates the use of the Dish, which results from the preparation outlined in columns 12 - 15, as part of a more complex or further processed dish.
