Technical conferences have been conducted annually by the Naval Minefield Community. The Author Index and Subject Index presented here list papers which have been submitted for use in connection with these conferences, and included in the PROCEEDINGS. The PROCEEDINGS include papers which were presented orally during the conference sessions, and papers on related topics which could not be presented for reasons such as absence, or limitations of the two-day conferences. Copies of the PROCEEDINGS are initially distributed upon request to individuals who furnish certifications of Secret security clearance and need-to-know in connection with conference sessions. In general, copies of individual papers included in the PROCEEDINGS are not available. Some of the papers have been published separately by the authors. Inquiries in this regard should be addressed to the authors personally or to their activities.

These cumulative indexes, reprinted from NOLTR 71-71, Volume II, are updated annually. This revision supersedes those previously published. It includes the papers published in NOLTR 71-71 and all previous volumes of the PROCEEDINGS.
