14. ABSTRACT The study is a prospective, randomized, double blinded, controlled, multi-site clinical trial to determine the efficacy of a tri-combination intervention to improve musculoskeletal gains in men with subacute to chronic SCI with low circulating testosterone levels. Participants will be enrolled at Kessler Foundation (KF), the University of Louisville-Frazier Rehab (UoL), the James J. Peters VA Medical Center (JJPVAMC). During year 2 the Study Team (Drs. Forrest, Bauman, and Harkema) established a new partnership with a pharmaceutical company (AbbVie) to supply Drug and Placebo for all potential study participants. During Year 2, all FDA requirements were satisfied for the acquisition of the IND number for all sites. The drug/placebo has been manufactured and shipped to the Kessler site (10/23/16). Kessler, JPVAMC and UoL received HRPO approval 8/18/16, 9/1/16 and UoL HRPO approval (3/17/17) respectively. In Year 3 JPVAMC, and UoL received training for drug/placebo and electrical stimulation intervention at Kessler on 11/16/16 and UoL (1/17/17—1/18/17), respectively. Data is entered into ITW database as per grant procedures and SOW. All three sites started screening and enrollment. To date, Kessler, UoL and JJPVAMC have prescreened 68 individuals, screened consented onsite 18, 3 are currently screening, 2 have completed 5 months intervention phase, one is currently training. Two are in follow-up of phase of protocol.					
15. SUBJECT TERMS Muscle atrophy and osteoporosis after SCI. Testosterone, placebo, multi muscle electrical stimulation, dynamic standing protocol, tri-combination intense therapeutic training.

1. INTRODUCTION

This study is a prospective, randomized, double blinded, controlled, multi-site clinical trial to determine the effectiveness of a tri-combination Activity-Dependent Rehabilitation Model on improving musculoskeletal gains in men with subacute to chronic SCI who have low serum testosterone levels. A total of 56 research participants will be enrolled across 3 clinical sites: Kessler Foundation Research Center, the University of Louisville-Frazier Rehab and the James J. Peters VA Medical Center (Bronx, NY). Each site will recruit 19 participants over 3 years or 6-7 subjects per year. Eligibility will be determined by the site physician and site PI. Research participants will be randomized into one of four groups: 1) Stand Training only; 2) Stand+Electrical Stimulation; 3) Stand Training+Testosterone; 4) Stand Training+Testosterone+Electrical stimulation. Each research participant will complete 60 sessions of training.

The model involves intense training with testosterone replacement therapy and electrical stimulation on multiple muscles. Our primary focus is to examine the change in muscle, but we will also look at the change in bone. This tri-combination Activity-Dependent Rehabilitation Model can easily be adapted to a clinic based model.

2. KEYWORDS

Testosterone, multi-muscle electrical stimulation, dynamic standing protocol, muscle volume, MRI, bone mineral density, DXA, QCT scans, metabolic bone markers, subacute SCI, chronic SCI.

3. ACCOMPLISHMENTS

- **What were the major goals of the project?**

Aims of Proposal

The overall aim of this proposal is to determine the interaction of testosterone, ES of multiple leg muscles and stand training or loading (bearing of the body weight) in individuals with subacute to early chronic SCI who are wheelchair reliant at least 75% of the time in a phase I/II multi-site randomized clinical trial (n=56, recruited at 3 training sites) on bone and muscle.

Our primary aim is to assess the effects of our novel tri-combination Activity-Dependent Rehabilitation model approach on muscle volume of the lower limbs.

Our secondary aims are:

i) To better define the mechanisms that contribute to changes in muscle.

Secondary outcome measures associated with this aim will further assess whether the tri-combination of stand training with TRT and ES will lead to increased muscle strength and contractile elements of muscle as shown by an increase in muscle torque, an increased expression of PGC-1 α and its downstream targets in the lower limb and an alteration in myostatin signaling. Preliminary data from animal studies have shown increased expression of Activin receptor IIB and increased nuclear localization of Smad2 and Smad3 after SCI and that these adverse changes are reversed by androgens. Additional studies will examine mRNA levels for myostatin, its receptor and its inhibitors (e.g., follistatins) and determine nuclear levels of Smad2 and Smad3. We will also measure resting energy expenditure to confirm that changes in muscles mass correspond to anticipated metabolic effects.

ii) To evaluate the changes in bone and bone structure with Stand Training with TRT and ES.

Secondary outcome measures of this aim will include BMD of the proximal tibia and distal femur; these are the most common sites for fracture and may also respond faster to intervention. Other secondary outcome measures will be BMD at the hip, cortical and trabecular bone with 3-D volumetric measurements, and bone markers for formation and resorption.

- **What was accomplished under these goals?**

In Year 1, a significant obstacle was encountered where we were informed that Watson Laboratories had been acquired by a company that would not be able to supply drug and placebo (the fill details are described on Pages 8-9; in addition, the sequential timeline to a positive solution for acquisition of drug/placebo is also provided on Pages 8-10). Therefore the major accomplishment in Year 1 was on November 10th, 2015 we received notification from Abbvie that they will provide the drug and placebo at no cost to the study. Drs. Forrest and Bauman contacted Dr. Henry on November 11, 2015 to notify her of our final solution. All of these details are described on Page 8-10. In year 1, local IRB at Kessler for original protocol was accomplished, but we placed all IRB submissions and resubmissions on hold until we organized a suitable solution for drug acquisition.

In Year 2, the major accomplishments were: i) the establishment of the contractual agreement between Kessler and Abbvie, Inc. for drug acquisition according to study protocol and at no cost to the study; ii) the manufacturing of drug and placebo; iii) the shipping of drug to Kessler Pharmacy (arrived 10/17/16); iv). Local IRBs were approved with all changes to satisfy Abbvie and FDA requests for Kessler, JJPVAMC, and UoL; v) HRPO IRB approval at Kessler (8/18/16), JJPVAMC (9/1/16); vi). Kessler established a pre-screen list and a screen consenting list for potential subjects to be recruited.

In Year 3, after the drug arrival at Kessler (10/17/16), JJPVAMC and Kessler completed their training of drug administration (Dr. William Bauman) and ST+ES training procedures (Gail F Forrest) and testing procedures at Kessler (11/21/16). UoL completed their training and testing procedures meeting at Kessler (1/17/17-1/18/17). Protocol for data collection and database entry for all sites [Kessler, JJPVAMC (11/21/16) and UoL (1/17/17—1/18/17)] were also completed. Kessler and JJPVAMC officially started screening of subjects. Regular biweekly conference calls (Kessler, UoL, JJPVAMC) are ongoing to discuss study protocol, training, and testing. All three sites started screening and enrollment. To date Kessler, UoL, and JJPVAMC have prescreened 68 individuals, screened consented onsite 18, completed training intervention period 2, enrolled 3 for training and currently screening 4 participants.

Dr Gail Forrest requested a No Cost Extension for 2 years (8/28/17). A full 2-year budget was requested and was submitted (11/6.17). Decision is pending.

Specific Aims: (1) To examine the effectiveness of stand training with testosterone and electrical stimulation to induce positive changes in muscle volume. **Our secondary aims are:**
i) To better define the mechanisms that contribute to changes in muscle. ii) To evaluate the changes in bone and bone structure with Stand Training with TRT and ES.

Note: IRB submissions were modified to show new protocol changes.- see below.

As per SOW	Timeline
Major Task 1: Adapt TRT to ES protocol: Complete IRB	
Subtask 1: Prepare Regulatory Documents and Research Protocol for Study 1	
Sites for IRB completions submitted Milestone Achieved: i) Initial Local IRB approval for Kessler, JJPVAMC, UoL	Kessler-12/4/15 JJPVC-1/20/16 UoL 10/27/16
Amendments: FDA IND number completed (4/29/15). Amended and resubmitted to reflect drug/changes. Final FDA IND number approved 3/3/16. <u>Amendment to local site IRBs</u> Note: In accordance with FDA Request. Each site was required to include a study physician as a co PI. The change is made to each site's IRB.	3/3/16

- Review eligibility criteria, exclusion criteria, screening protocol - Finalize amendments to consent form & human subjects protocol - Coordinate with Sites for IRB protocol resubmission - Coordinate with Sites for IRB completions of all amendments. Kessler approval 4/11/16; JJPVAMC approval 1/20/16; UoL 10/27/16	Kessler-4/11/16; JJPVC-1/20/16 UoL-10/27/16
Sites for IRB completions submitted to HRPO Milestone Achieved: i) <i>HRPO approval for Kessler, JJPVAMC</i> (Kessler submitted IRB to HRPO - 5/18/16) ii) <i>UoL HRPO IRB submitted 10/31/16</i>	Kessler- 8/18/16 JJPVAMC- 9/1/16

Major Task 2: Training of protocol at Kessler	3-6
Manual of Operations (MOP) and Standard Operating Procedures for TRT and Case Report Forms completed	6/28/14
Forrest and Harkema trained site PTs on Combination ST+ES. <u>Additional set up</u> of training software and hardware at Kessler for PTs Completed repeatability testing on ES ramping, training procedures to be applied at all sites JJPVAMC Training meeting for ST+ES training procedures at Kessler	4/28/15 6/15/16-6/30/16 11/21/16
Dr William Bauman (WB) will train sites to administer testosterone gel based on Standard Operating Procedures.	11/21/16/ Ongoing
Regular biweekly Conference calls (Kessler, UoL, JJPVAMC) established to discuss study protocol, training and testing.	Ongoing
Milestone Achieved: i) Kessler and UoL Research staff already trained in standing and ES protocol. ES program automated. ii) JJPVAMC schedule to be trained on ES	JJPVAMC 11/21/16

Major Task 3: Participant Recruitment, Therapy, Participant Evaluation	3-6 after IRB approval
Subtask 1: Data set up with initial subject at each site.	6/28/14
Coordinate with sites for all study steps, data collection and database requirements' - will occur at Training Session at Kessler for JJPVAMC	11/21/16
Set up assessment measurements (already established at 2 sites – Kessler, UoL). JJPVAMC will have kick off meeting 11/21/16	11/21/16/ Ongoing
Begin and continue subject recruitment for recruitment and randomization. Numbers below.	9/15/16 Ongoing
Milestone : Evaluate and assign participants to one of the four randomized groups at Kessler	Ongoing
Milestone Achieved: Kessler and JJPVAMC sites: Study begins	Kessler 9/15/16; JJPVC11/21/16
Milestone Achieved: 1st participant screen consented at Kessler	

Provide bullet point list of performance and/or progress status relating to the above protocol and discuss recruitment number, enrollment number, drop outs, disqualified, etc. Discuss any administrative, technical, or logistical issues that may impact

performance or progress of the study (e.g. slow enrollment, large dropouts, or adverse events) for the above HPRO approved protocol.

- o As explained above, our study progress has been hindered because of the need to acquire a replacement study drug/placebo.
- o Abbvie supplied the drug (Gel) and placebo. Contract was signed (6/24/16). Abbvie drug delivery 10/17/16
- o Start-up meetings for training procedure for drug, ST+ES protocol, and all testing procedures for screen and main consenting procedures completed (11/21/16 and 17/17-18/17).
- o Screening has occurred at all sites.
- o Kessler has pre-screened 35 participants, UoL have pre-screened 25, JJPVAMC have pre-screened 8.
- o Kessler screened consented 5 for enrollment (one withdrew), UoL screened 10, and JJPVAMC screened consented 3.
- o Kessler enrolled 2, UoL enrolled 1 into main study.
- o Two participants have completed 80 sessions of training and are in follow up-period.
- o Kessler is currently training 1 participant currently.
- o Kentucky is currently screening 3 participants
- o Kessler has 1 participant awaiting to be screened.
- o Kessler had one SAE (reported in Quarter 3 report) where *Kessler had one subject “on medical hold” 4/28/2017- 6/5/2017*. Therefore, this stopped his training schedule. Issue was resolved and individual continued training phase.

Site	Prescreen	Waiting to screen	Screen consented (Screen Consent and T consent)	Screen in progress	Failed Screen	Passed screen Screen/waiting to enroll	Main Consent	Training	Follow-Up
Kessler	35	2	5 (1 withdrew)	4	6		2	1	1
JJPVAMC	8	3	3		2	1	0	0	0
UofL	25	3	10 (T - screen)	3	14	1 (1 withdrew)	1	0	1

• **What opportunities for training and professional development has the project provided?**

In Year 3 – study teams across all sites were involved in professional development:

- o Training in **Year 3** involved Kessler PTs continued work on the training protocol for the multi-muscle stimulators to set up all ES training programs and procedures as automated software for all sites before training first participant.
- o In Year 3 –UoL completed “on site” training at Kessler for complete testing and training protocol, including drug application and NMES (ES training protocol). Currently sites are actively involved in all aspects of study (enrollment, testing, training).

• **How were the results disseminated to communities of interest?**

Nothing to report

• **What do you plan to do during the next reporting period to accomplish the goals?**

In the next year we are actively prescreening and screening to enroll subjects into the intervention phase as per our SOW (4.25.16).

Note: *The time line in the SOW (submitted 4.25.16) below was revised in the “No Cost Extension” request. No Cost Extension was submitted 8.28.17. A new budget was requested and submitted 11/6/17. Approval pending:**

Major Task 1: Adapt TRT to ES protocol: Complete IRB	Time line (months)
Submit amendments, adverse events and protocol deviations as needed	As needed
Coordinate with Sites for annual IRB report for continuing review	Annually
<i>Milestone Achieved: Local IRB approval at Kessler, UoL , JJPVAMC)</i>	3
Major Task 2: Training of protocol at Kessler	3-6 after IRB approval
Training for ES and drug at Kessler site for JJPVAMC	11/21/16
Dr William Bauman (WB) will train all sites on testosterone gel	11/21/16
Forrest, Harkema and Bauman will continually instruct all sites on protocol description per MOP	11/21/16 and ongoing
<i>Milestone Achieved: Research staff trained</i>	11/21/16 and ongoing
Subtask 2: Site Visit to review training	4 -5
Drs. Forrest will visit the Bronx VAMC study site to provide review and potential additional instruction of the procedures for Stand Training with ES (December 2016, January , 2017 and as required). This will be followed by ongoing conference calls.	4 -5
<i>Milestone Achieved: Maintained protocol training and follow up at all sites.</i>	4 -5
Major Task 3: Participant Recruitment, Therapy, Participant Evaluation	25-30
Subtask 1: Continue Data set up with subjects at each site	Timeline after IRB approval
Continue to Coordinate with sites for all study steps, web data collection and database requirements : Continue with assessment measurements at all sites	4-6
<i>Milestone Achieved: 1st participant consented, screened enrolled at <u>all sites</u> Kessler completed first screen in 2016; JJPVAMC completed first screen in 2017 after 11/21/16 meeting; UoL and Kessler has enrolled and completed training on one participant. Participants are in follow up period (full report below).</i>	4-6
<i>Milestone Achieved: All sites Study begins</i>	4-6
<i>Continue subject recruitment</i>	4-30
<i>Continue Screen potential participants</i>	4-30
<i>Evaluate and assign participants to one of the four randomized groups</i>	4-30
<i>Outcome measures assessment at each time point continues</i>	4- 30
<i>At all sites: Research participant complete 80 sessions of training frequency of 4 times per week (1.5-hour) followed by post testing and follow up (MRI, DXA)</i>	4- 33
<i>Milestone Achieved: Record data for year 1, 2, 3, into ITW database; Report</i>	4-33

<i>initial findings</i>	
<i>Milestone Achieved: Report findings from Clinical Trail</i>	33-36
Major Task 6: Data Analysis	
Subtask 1: Coordinate with Sites & Data Core entry for monitoring data collection rates and data quality	4-33
Data analyses ongoing for outcome measures (Muscle volume, muscle torque, gene expression, myostatin signaling, BMD, bone and blood markers, volumetric measures of bone resting energy expenditure)	6-33
<i>Milestone Achieved: Report results from data analyses</i>	35-36

4. IMPACT

Nothing to report

5. CHANGES/PROBLEMS

- **Changes in approach**

There was no change in approach in Year 1 or Year 2. In Year 3, the total number of stand training hours was extended to 80 hours within the overall intervention period. Documents were sent to HRPO (6/28/17) and approved (7/11/17).

- **Actual or anticipated problems or delays and actions or plans to resolve them**

During the reporting period in Year 1 there were significant delays associated with acquisition and delivery of drug/placebo. These delays were reported in the quarterly reports. The delays are outlined in detail below. Note for any delays in Year 3 – **these are highlighted in RED**

As reported in Quarter 1, year 1 report the main problem to address for Quarter 1 in year 1 was that we were informed that Watson Laboratories had been acquired by a company that would not be able to supply drug and placebo for our proposed placebo-controlled RCT.

For the Year 2, Quarter 1 report we proposed our final solution to the TRT/Placebo issue.

- At the time of submission of our grant, Watson Laboratories had provided a letter of support which stated that this company would provide TRT patch and matching placebo for our study. The support being offered by Watson Laboratories was a continuation of previous collaboration with the company for similar work that was completed by Dr. William A. Bauman, co-principal investigator on the current grant, which addressed the safety and efficacy of TRT patch in a population of persons with chronic spinal cord injury at the James J. Peters VA Medical Center and The Kessler Institute for Rehabilitation, work which was published in *Hormones and Metabolic Research* in 2011. In our Quarter 1, Year 1 report we reported that Watson Laboratories was obtained by Actavis Pharmaceuticals, and management at the new company had informed us that they had decided not to provide study drug for our RCT, nor for any other RCTs at this time. It was inferred that their policy decision was based on a change in philosophy toward research initiatives which took into account the total cost of supplying matching placebo and the assumption of risk for any new study.

- o After careful consideration and in discussion with Patricia Henry, PhD, Science Officer (discussions: 2/17/2015 and 4/1/2015) Drs. Forrest, Bauman, and Harkema addressed the problem in a satisfactory manner to maintain the study as designed and to make no changes to the SOW.
- o In Quarter 1, we reported that the FDA approved New York based compound pharmacy “Metro Drugs” would be supplying the drug (Gel) and placebo to the sites, and we provided a letter from the company confirming this agreement. Shortly after we submitted the Quarter 1 report, we were informed by the New York State (NYS) DEA that the only suitable and legal option to supplying drug and placebo to our 3 study sites was FDA approved pharmacy that was located outside NYS because of stringent laws that prohibited the dispensing of any controlled substances by an appropriately licensed NYS pharmacy outside of the state. In actual practice, the testosterone/placebo preparation would be sent by the FDA pharmacy directly to the subjects.
- o As you may appreciate, identifying a FDA compound pharmacy that has the experience and resources to supply both study drug and placebo, with an appropriate dispensing system in place, was an onerous task, and this was, at the time, our main difficulty with being able to initiate the study. A pharmacy was located and agreed to provide the investigators with drug and placebo. To do so required the investigators to pay for the cost of topical generic testosterone preparation (at approximately 25% the cost of Androderm) and for a placebo gel. The cost of these preparations had been provided in a previous email, as well as the other associated costs, including those of the cost of dispensing (\$10,920), repackaging (\$6006), and shipping (\$24,570), with a total final cost of the pharmacy to provide us with drug/placebo of over \$100,000, an expense that were not budgeted prior to Watson Laboratories withdrawing their support for our proposal. Of note, the investigators decided that intramuscular preparations of testosterone were not physiologic (peaks and valleys in pharmacokinetics) and in the SCI population would be associated with a heightened risk of autonomic dysreflexia, potentially a life-threatening complication, if the injection is delivered below the level of lesion; administration of the intramuscular injection above the level of lesion may be associated with pain and discomfort upon transfers, which may limit mobility, reduce drug/placebo compliance, and increase drop-out rates. A total of 56 research participants is proposed to be studied in our proposal.
- o The source of the drug was Belmar Pharmacies, a licensed non-resident pharmacy (license #30,649) and that is licensed with the DEA. **The letter was provided in the Quarterly report dated 7/14/15.** The pharmacy would have supplied the patient-specific compounded testosterone or placebo, directly to patients based upon a valid prescription. To date, this company had been the only viable option after an exhaustive search of both ClinicalTrials.gov and reaching out to other pharmacies. Drs. Forrest and Bauman worked with the company to set up the standard of operation procedures for dispensing the drug/placebo to study participants.
- o Drs. Forrest and Bauman had been in discussions via several email correspondences and conference calls (6/9/15; 6/15/15; 6/16/15) with Patricia Henry, Ph.D., Science Officer, regarding the potential of additional funds to cover the additional cost of the drug. Based on our discussions, Dr. Henry instructed us to submit a formal request for additional funding (6/18/15).
- o Drs. Forrest and Bauman submitted a formal request to the DOD for additional funding on 6/23/15. **Please see letter in report dated 7/14/15.**
- o Of note, in January 2015, the investigators submitted a request to Abbvie to provide testosterone gel and matching placebo for the study. We considered this “option” to be a real possibility, albeit somewhat unlikely if one considers the length of time that our request had languished without resolution. However, our proposal continued to be actively considered. We suggested in

our previous quarterly report (7/14/2015) that if this company approved our request, then the investigators would proceed with the clinical trial without the need for additional financial support from the DoD.

- o Fortunately, on November 10th, 2015 notification was received from Abbvie that the company had agreed, in principle, to provide the drug and placebo at no cost to the study. Drs. Forrest and Bauman contacted Dr. Henry on November 11, 2015 to notify her of our final solution. Dr. Henry had requested that Dr. Forrest submit a revised SOW to Dr Henry on 11/23/15. Based on the revised SOW (4/25/16. Year 1 Final report) – we have amended the protocols at all institutions to comply with our proposed changes in drug formulation (e.g., patch to gel application), dosage, and origin of agent/placebo.

o **During the reporting period in Year 2:**

- o Abbvie Inc. have manufactured drug/placebo at no cost to the grant. Final contractual agreement between Kessler Foundation and Abbvie was signed 6/26/16 (details Q3, Year 2) .
- o All details associated with shipping of drug to each site, storage of drug, administration have been addressed in Q2, Year 2.
- o Final delivery to drug to Kessler has occurred on 10/23/16.
- o An additional delay to final IRB approval in Year 2 was the acquisition of the IND number from the FDA and the modification of protocol, as requested by the FDA. This was accomplished by 3/3/16 at Kessler.

o **During the reporting period in Year 3:**

- o All sites have started pre-screening, and screening. All screen procedures, randomization, drug acquisition, testing and training protocols are operational. Sites have completed training of subjects. Currently these subjects are in follow-up phase.
- o Kessler had one SAE (reported in Quarter 3 report) where *Kessler had one subject “on medical hold” 4/28/2017- 6/5/2017*. Therefore, this medical event stopped his training schedule. The issue was resolved, and individual continued the training phase.

• **Changes that had a significant impact on expenditures**

- o Because of the unanticipated delay in our obtaining of drug/placebo, the projected funds for Year 1 and Year 2 have not been expended. These details were outlined both in our financial and quarterly reports.
- o With the No Cost Extension – A revised SOW and Budget have been submitted.

• **Significant changes in use or care of human subjects, vertebrate animals, biohazards, and/or select agents**

No significant change to human subjects

6. PRODUCTS

None to report

- **Publications, conference papers, and presentations**

None to report

7. PARTICIPANTS & OTHER COLLABORATING ORGANIZATIONS

- **Has there been a change in the active other support of the PD/PI(s) or senior/key personnel since the last reporting period?**

Nothing to report

- **What individuals have worked on the project?**

In Year 3 period individuals' have worked primarily on training sites, pre-screening, screen consenting and training of subjects. In addition, Physical Therapists and technicians have worked on the establishment of the automated ES program for the standing +ES protocol. In Year 3, PT and study team have increased their amount of time charged to grant because of training and testing procedures.

Overall Submitting PI: Gail F Forrest Ph.D.

Co- PI: William A. Bauman, M.D.

Individuals that have worked for at least 1 month (~160 hrs) in year 1.

Name: Gail Forrest

Project Role: PI

Nearest person month worked: 1.5

Contribution to Project: Dr Forrest has worked in overall management of grant and with the study teams at all sites.

Name: Milda Woods

Project Role: Study Coordinator, consultant

Nearest person month worked: 1.5 months

Contribution to Project: Ms. Woods has worked continually with Dr Forrest in year 3:

- i) On the setting up of the reports to the FDA and material related to adverse events.
- ii) On material for submissions to the HRPO for all IRB approvals.

Name: Leighann Martinez

Project Role: Site Study Coordinator

Nearest person month worked: 1.5 months

Contribution to Project: Ms. Martinez has worked continually with Dr Forrest in year 3:

- i) On the setting in house IRB documents.
- ii) On screening, administration and coordinating subjects' attendance.

Name: Erica Garbarini

Project Role: Physical Therapist

Nearest person month worked: 1.5 month.

Contribution to Project: Ms Garbarini has worked continually with Dr Forrest in year 3

- i) On training of participants at Kessler as well as coordinating testing at Kessler.

Other Support: New Jersey on Spinal Cord Injury Research, Rehabilitation Engineering Research Centers (RERC) National Institute on Disability, Independent Living and Rehabilitation Research

- **What other organizations have been involved as partners?**

Site 2: University of Louisville (UoL)
Frazier Rehab Institute
220 Abraham Flexner Way, Suite 1506
Louisville, KY 40202
Site PI: Susan Harkema Ph.D.
Site 3: James J. Peters VA Medical Center (JJPVA)
130 West Kingsbridge Road
Bronx, NY 10468
Site PI: Ann Spungen. EdD. William Bauman.

- **Has there been a change in the active other support of the PD/PI(s) or senior/key personnel since the last reporting period?**

POSITION TITLE: Associate Director, Human Performance and Engineering(HPE).

EDUCATION/TRAINING *(Begin with baccalaureate or other initial professional education, such as nursing, include postdoctoral training and residency training if applicable. Add/delete rows as necessary.)*

INSTITUTION AND LOCATION	DEGREE (if applicable)	Completion Date MM/YYYY	FIELD OF STUDY
Bachelor of Applied Science RMIT, Melb., Australia	B. App. Sc	12/1979	Mathematics/Computing
Temple University, Philadelphia	Ph.D.	1/2001	Biomechanics
Post Doctoral Fellow, Kessler Foundation		1/2001-12/2002	Biomechanics

1 B. Positions and Honors

Prior to 1989	Mathematics and Computer Science Senior Level Teacher, Australia.
1989-1992	Corporate Consultant to Four Season Hotels (Daikyo Corporation), Australia and Japan.
1991-1992	Victoria University, Melbourne, Australia, Grad Dip. Biomechanics
1995-1997	Teaching Assistant - Human Anatomy and Biomechanics, Temple University.
1997-1998	Biomechanics Lecturer and Coordinator, Temple University.
1998-1999	Teaching Assistant – Physiology, Biomechanics, and Anatomy, Temple University
1999-2000	Research Assistant – “Dynamic Control of Head Stability in Older Adults” Grant (NIA # RO3), Physical Therapy Dept, Temple University.
2000-2002	Post Doctoral Fellow, Kessler Medical Rehabilitation Research and Education Corporation, West Orange, NJ.
2003-2007	Research Scientist II , Kessler Medical Rehabilitation Research and Education Corporation, West Orange, NJ.
2007- 2012	Interim Director, HPMAL , Kessler Foundation Research Center , West Orange, NJ.
2007- Date	Kessler site Director of the NeuroRecovery Network.
2012- 2014	Assistant. Director Human Performance Laboratory, Kessler Foundation.
2014- Current	Associate Director Human Performance and Engineering, Kessler Foundation.

University Appointments

5/2000-9/2000	Adjunct Professor Biomechanics, Physiology, – Temple University, University of Pennsylvania
1/2001-6/2005	Instructor, University of Medicine and Dentistry of New Jersey / New Jersey Medical School
7/5/05-present	Assistant Professor University of Medicine and Dentistry of New Jersey/New Jersey Medical Sc.
2011-Date	Affiliated Faculty Department of Biomedical Engineering, New Jersey Institute of Technology, Newark, NJ
2012- Date	Member of the Graduate Faculty in Biomedical Science, University of Medicine and Dentistry of New Jersey, Newark, NJ.
2013 –Date	Associate Professor Rutgers New Jersey Medical School, Rutgers, the State University of New Jersey

Other Professional Experience

1999 - 2000	Research Assistant Dynamic Control of Head Stability, Agency NIH/NIA (RO3); (Ronita Cromwell, Ph.D., Principal Investigator)
2001 - present	Institutional Review Board Member Kessler Foundation

2004 - present	Reviewer for Journal of Neuroengineering and Rehabilitation
2005 - present	Reviewer of Journal of Rehabilitation Research and Development
2005 - present	Reviewer of Journal of Spinal Cord Medicine
2005 - present	Compliance Committee member (subcommittee of IRB)
2005 - present	Committee member for ACRM International task force
2005 - present	Reviewer, RESNA
2009 -present	Reviewer NIH (2014/10 ZRG1 BBBP-Y (05), Motor Function, Speech and Rehabilitation (MFSR) Study Section).
2011-present	Craig H Neilson Foundation
2013-present	Reviewer for Gait and Posture.

2 C. Contribution to Science

1. My dissertation concentrated on understanding the dynamics of walking for older and younger adults using kinematics and muscle activation and intersegmental dynamics of the lower limbs;
 - i. Cromwell R.L., Newton, R. A., **Forrest, G.F.** Influence of vision on head stabilization strategies on older adults during walking. *Journal of Gerontology: Medical Sciences*, , 57(7),: M442-8, 2002.

2. My postdoctoral fellowship work contributed to the scientific understanding of neural plasticity in the lower limbs after intense locomotor step training intervention using a treadmill with body weight support for both motor complete and incomplete SCI. For all of this dissertation work we utilized a full body kinematic marker set and lower extremity muscle activation to study the effect of the intervention on treadmill gait and as well we studied postural control using kinematics and muscle firing patterns of the lower limb.

Biomarkers of Spontaneous Recovery from Traumatic Spinal Cord Injury

The objective is to test the hypothesis that levels of some inflammatory biomarkers correlate inversely with functional recovery throughout the first year after spinal cord injury (SCI). The project specific aims are to (1) identify the circulating inflammatory response in patients with SCI, (2) determine the trajectory of spontaneous functional recovery in patients with SCI, and (3) derive a predictive, multiscale model of functional recovery after SCI.

A

Randomized, Crossover Clinical Trial of Exoskeletal-Assisted Walking to Improve Mobility, Bowel Function, and Cardiometabolic Profiles in Persons with SCI

The primary objectives of this research is to document how long it will take to reach functional gains, such as speed and distance after 36 sessions of training with these devices. Preliminary studies support the goals that walking in the exoskeletons will improve bowel function and body composition.

CSCR13IRG013

CSCR14ERG007

Pilkar (PI) **Forrest (Co-I)**

10/17/2014-9/16/2018

New Jersey Commission on Spinal Cord Research

Development of Signal Processing Toolbox for Assessing Neuromuscular Response during Electrical Stimulation.

The goal of this study is to develop a robust signal processing algorithm to extract EMG during ES and study the physiological significance of ES on neuromuscular properties of the stimulated muscle. The outcomes of this study will help in understanding the direct effects of ES on muscles by getting access to high quality EMG during ES and help the clinician or researcher to modify and optimize FES training paradigms based on the target muscle response. This could have a major impact on the field of spinal cord injury research and rehabilitation

BIOGRAPHICAL SKETCH

eRA COMMONS USER NAME (credential, e.g., agency login): WBAUMAN

POSITION TITLE: Professor of Medicine and Rehabilitation Medicine; Director, Center for the Medical Consequences of SCI

EDUCATION/TRAINING

INSTITUTION AND LOCATION	DEGREE (if applicable)	Completion Date MM/YYYY	FIELD OF STUDY
Harvard College, Boston, MA	B.A.	06/1972	English
State University of New York, Downstate College of Medicine, New York, NY	M.D.	06/1976	Medicine

3 A. Personal Statement

Dr. Bauman, Director of the National Center of Excellence, is an authority on calcium metabolism and bone disease in persons with SCI. He has been invited to be the primary author of a chapter entitled "Skeletal Consequences of Spinal Cord Injury" for the 8th Edition of the American Society of Bone and Mineral Research's *Primer on the Metabolic Bone Diseases and Disorders of Mineral Metabolism*. He is the senior author of a chapter entitled *Immobilization Osteoporosis* for the text entitled *Osteoporosis*. Dr. Bauman was the initial investigator to formally study the prevalence of vitamin D deficiency and replacement therapy in persons with spinal cord injury. Dr. Bauman is an endocrinologist who has written for medical and rehabilitation journals over the past 34 years, authored over 250 peer-reviewed papers, book chapters, and review articles. He has lectured to national and international audiences on the hormonal aspects of bone disease in spinal cord injury. Dr. Bauman has examined the cellular, biochemical, and molecular effects of paralysis due to spinal cord injury or nerve transection on muscle and bone. He was invited to be Chairman of the International Endocrinology & Metabolism Basic and the Extended Spinal Cord Injury Data Sets. His efforts have led to nationwide changes in the healthcare of persons with disability, and, in particular, immobilization due to spinal cord injury.

Dr. Bauman received the Excellence Award from the American Paraplegia Society for outstanding leadership and accomplishments in SCI health care. In 2005, he received the Paul B. Magnuson Award from the Department of Veterans Affairs Rehabilitation Research & Development Service, its highest service award. Because of his knowledge and expertise, he was invited to give the 31st G. Heiner Sell Memorial Lectureship at the 2012 Annual Scientific Meeting of the American Spinal Injury Association. Dr. Bauman, along with Dr. Ann M. Spungen, the Associate Director of the Center of Excellence, was awarded the highly prestigious 2014 Samuel J. Heyman Science and Environment Medal.

4 B. Positions and Honors**4.1 Positions and Employment**

1982 – 1987	Associate Professor of Medicine, Albert Einstein College of Medicine, Bronx, NY
1983 – 1985	Attending Consultant, Department of Medicine, VA Medical Center, Bronx, NY
1985 – 1989	Physician/Research Associate, Solomon A. Berson Research Laboratory, VA Medical Center, Bronx, NY
1987 – 1989	Associate Professor of Medicine and Rehabilitation, Mount Sinai School of Medicine, New York, NY
1989 – 2003	Director, Spinal Cord Damage Research Center, Mount Sinai Medical Center, New York and VA Medical Center, Bronx, NY
1996 – Present	Professor of Medicine, Mount Sinai School of Medicine, New York, NY
1996 – Present	Professor of Rehabilitation Medicine, Mount Sinai School of Medicine, New York, NY
2001 – Present	Director, VA Rehabilitation Research & Development Center of Excellence for the Medical

4.2 Other Experience and Professional Memberships

1976 – 1977	Medical Internship, New York University Medical Center, New York, NY
1977 – 1979	Medical Residency, Montefiore Hospital & Medical Center, Bronx, NY
1979 – 1980	Endocrine Fellowship, VA Medical Center, Bronx, NY
1980 – 1982	Endocrine Fellowship, Montefiore Medical Center, Bronx, NY
1982 – 1985	NIH SERCA Recipient, Attending, Departments of Medicine and Endocrinology & Clinical Sciences, Montefiore Medical Center, Bronx, NY

4.3 Honors

1972	Honors graduate in English Literature, Harvard University
1982	Recipient of NIH Special Emphasis Research Career Award
1994	Excellence in Medical Research, Medical Service, VA Medical Center, Bronx, NY
2001	William Dock Award for outstanding teaching ability in Internal Medicine/Endocrinology
2002	Excellence Award in Research (American Paraplegia Society)
2005	Paul B. Magnusson Award, VA RR&D Service
2014	Medalist, Samuel J. Heyman Service to America Award, Science & Environment

5 C. Contribution to Science

1. Osteoporosis and fractures present a major problem for persons with SCI. My contributions include defining calcium metabolism and bone disease in persons with SCI. Our publications first suggested a high prevalence of vitamin D deficiency in persons with SCI and proposed an approach for vitamin D replacement therapy. Despite literature that suggested a value to bisphosphonate therapy in those with SCI, possibly because of the work conducted in those with varying completeness of lesion, our work has demonstrated the limited efficacy of bisphosphonates administration in persons with acute complete motor SCI, necessitating the search for more effective therapeutic approaches. Our work in monozygotic twins, discordant for SCI, has suggested that bone loss continues for decades after initial injury, a new and controversial finding. We have shown that bone mass below the level of lesion is directly associated to body fat, and also directly correlated to the serum estradiol levels. Our group has provided evidence of the cellular, biochemical, and molecular effects of paralysis due to SCI or nerve transection on bone.

2. Although it would appear intuitive that individuals who have adverse body composition and reside at the lowest end of the activity spectrum would have metabolic problems which predispose to cardiovascular disease, prior to our group's entrance to the field, little had been reported in the literature. My contribution has been to be the first investigator to systematically study carbohydrate and lipid metabolism in persons with SCI and suggest that the abnormalities observed would be anticipated to predispose to premature cardiovascular disease. Prior to this work, it was unclear that persons with SCI had disorders of carbohydrate metabolism, which has since been characterized by a high prevalence of carbohydrate intolerance and diabetes mellitus. The finding of low high-density lipoprotein (HDL) cholesterol in those with SCI was observed by our group and subsequently confirmed by others. By nuclear medicine technology and electron beam computerized tomography, publications demonstrated the likelihood of premature atherosclerotic disease in those with SCI. Recently, we have reported on the blunted action of insulin on the sublesional microvascular.

3. Persons with SCI immediately lose muscle and gain fat after injury. Prior to our work, there had been a paucity of rigorous body composition studies. My contribution to body composition in persons with SCI has been to compare various methodologies to determine body adiposity, develop or apply innovative methodologies, define body composition changes after acute and in chronic injury, and more clearly delineate the relationship of body composition to metabolic derangements. A portion of this work, which was performed in monozygotic twins, one in each pair discordant for SCI, and in cross-sectional studies that have served to define changes in soft tissue mass over decades of life in persons with SCI, has improved our general knowledge in this area of study. The loss of muscle in those with chronic SCI occurs at an accelerated rate both above and below the level of lesion, suggesting a global, or systematic hormonal, process. Depressed levels of anabolic hormones (testosterone and growth hormone/ insulin-like growth factor) may partially explain the general adverse changes in soft tissue body composition in individuals with chronic SCI. These articles have shown that testosterone levels are lower with increasing duration of injury and by decade of life in those with SCI than in the able-bodied population. Growth hormone and insulin-like growth factor levels are also depressed in younger individuals with SCI. In our preclinical articles, the influence of androgens on muscle mass and signaling pathways after SCI or nerve transection has been described, as well as the antagonistic effect of androgens on the catabolic effect of glucocorticoids on muscle.

4. Other than some of my above noted contributions to the endocrinology and metabolism of persons with SCI, my contribution to Spinal Cord Medicine have been wide in scope in both the clinical and pre-clinical areas. In clinical medicine, my publications have been in the following areas: GI motility of the esophagus, stomach, small intestine, and, especially, the colon, with interventions to improve colonic motility and evacuation, including the novel drug combination of neostigmine+ glycopyrrolate, and strategies to improve cleansing preparation for elective colonoscopy; identifying for the first time obstructive airway disease in persons with SCI and interventions to improve function, defining restrictive airway disease in persons with complete motor SCI and strategies to improve respiratory muscle strength; defined cardiovascular autonomic dysregulation in persons with SCI and interventions to improve hemodynamics, as well as the association of cognitive deficits associated with hypotension; pressure ulcer energy requirements, healing, and intervention to heal the wound. Recently, work has been reported that describes the vertical ground reaction force and oxygen utilization while using the ReWalk exoskeleton. In the preclinical area, our work has addressed the effect of spinal cord injury on skeletal muscle. We have addressed the effect of SCI and nerve transection on muscle mass, and the effect of various anabolic or catabolic interventions on known and newly defined signaling pathways in skeletal muscle.

D. Research Support Ongoing Research Support

VA RR&D Service Bauman (PI)
National Center Grant
\$450,000

07/01/16-06/30/21

Title: Center for the Medical Consequences of Spinal Cord Injury

Specific Aims: To improve the health and quality of life for persons with SCI. The center identified four major program areas: (1) endocrine & metabolic, (2) GI, (3) cardiovascular autonomic, and (4) molecular-musculoskeletal. A study in the Endocrine Program will test the efficacy of a potent antiresorptive agent (denosumab) to prevent bone loss after acute/subacute motor-incomplete SCI. VA Career Development awardees were recruited and trained, as well as other trainees and junior investigators at our medical facility.

Role: Director/Principal Investigator

Grant # 297267 Bauman (PI)

07/01/14 – 06/30/18

Craig H. Neilsen Foundation

\$598,818

Title: Prevention of Bone Loss after Acute Spinal Cord Injury

Specific Aim: To test a RANKL inhibitor (denosumab) to prevent bone loss in persons with acute motor-complete SCI.

Role: PI

CDMRP #11235809 Forrest and Bauman (PI)

9/01/14-8/30/19

Department of Defense CDMRP

\$984,976

Title: Testosterone Combined With Electrical Stimulation & Standing: Effect on Muscle and Bone

Specific Aim: To determine whether standing with or without muscle electrical stimulation with testosterone/placebo will improve muscle mass and bone mass.

Role: Co-PI

Federal #B1313-R Qin (PI)

10/01/14 – 9/30/18

VA RR&D Service

\$885,291

Title: Sclerostin Antagonism and the Osteocyte's Role: Prevention of Bone Loss

Specific Aim: To evaluate the ability of anti-sclerostin antibody (higher & lower doses) to preserve bone integrity after SCI, and to test whether impairment of osteocyte function is one mechanism by which SCI causes bone loss and whether restoration of normal osteocyte function after administration of anti-sclerostin antibody can prevent or reverse bone loss.

Role: Co-Investigator

VA RR&D pending funding Qin (PI)

05/01/2017 – 04/30/2021

IIR Merit Review

\$1,098,191

Title: Novel Pharmacological and Non-pharmacological Interventions for Bone Loss in SCI

Specific Aim: To test in rat models of moderate and severe contusion SCI, whether a prolonged course of low intensity vibration (LIV) will preserve bone. Regulation of mechanisms in osteocyte to stimulate bone formation and reduce bone resorption after LIV, in the absence and in conjunction with an anti-RANKL antibody and/or androgen, will be investigated.

Role: Co-Investigator

Completed (last 3 years):

VA RR&D #B8048R Qin (PI)

09/01/13 – 08/31/16

IIR Merit Review

\$621,488

Title: FES and Androgens in Bone Loss after SCI: Synergistic Effects and Mechanisms

Specific Aim: To evaluate the ability of mechanical intervention (functional electrical stimulation) or testosterone administration to reduce or prevent bone loss in a rat model of acute SCI.

Role: Co-Investigator

VA RR&D Service #B9212-C Bauman (PI)

07/11-06/16

National Center Grant

Title: Center of Excellence for the Medical Consequences of Spinal Cord Injury

Specific Aims: To improve the health and quality of life for persons with SCI. The center identified five major program areas: (1) endocrine & metabolic, (2) pulmonary, (3) GI, (4) cardiovascular autonomic, and (5) molecular-musculoskeletal. A study in the Endocrine Program will test the efficacy of zoledronic acid to prevent bone loss after acute/subacute SCI. VA Career Development awardees were recruited and trained, as well as other trainees and junior investigators at our medical facility.

Role: Director/Principal Investigator

Title: Testosterone Replacement Therapy in Combination with Electrical Stimulation and Standing: Effect on

Muscle and Bone in Spinal Cord Injured Males Log #SC130243 Award # W81XWH-14-2-0190

PI: Gail F Forrest Ph.D; William Bauman MD.

Org: Kessler Foundation Name Here

Award Amount: \$1,914,970

Study/Product Aim(s)

• **Primary Aim:** To determine the effectiveness and superiority of Stand Training with TRT and ES to induce beneficial changes in muscle mass compared to other combinations of these interventions.

Approach

Three sites will recruit 19 participants over 3 years or 6 subjects per year. Research participants will be randomized into one of 4 training groups: 1) Stand Training only (ST); 2) ST + ES; 3) ST + TRT; 4) ST + TRT + ES. Pre and post training outcome measures (thigh, shank, muscle volume, Quadriceps muscle torque, mRNA levels for myostatin and gene expression and BMD for the proximal tibia, distal femur and hip, markers for bone formation and resorption, 3-D volumetric measurement of cortical and trabecular bone in the lower limbs, and resting energy expenditure.

Notification from Abbvie that they will provide the drug and placebo at no cost to the study
 IRB modifications submitted to reflect drug formulation (e.g., patch to gel application), dosage, and origin of agent/placebo.
 IND number/status completed
 IRB approved at Kessler and JJPVC & UoL.
 Drug arrived at Kessler 10/17/16
 Training for Drug, ST+ES training and testing outcomes 11/21/16
 Recruitment, screening (All three sites), randomization, subject training commenced.
 Prescreened 68, screen enrolled 18, Training phase completed on 2 subjects.

Figure: Project Accomplishment: to date.

Timeline and Cost

Activities	CY	Yr1	Y2	Y3
IRB procedures/setup/Set up Case report form				
Recruit 6 participants test/train				
Recruit 6 participants test/train				
Recruit 12				

Updated: (1/14/16) Note Timeline will need changed to due to all the delays. We have submitted a revised SOW with a No Cost Extension Request. Decision pending.

Goals/Milestones

2015/16/17 Milestones– Milestone Achieved: Local IRB and HRPO approval at Kessler, UoL, JJPVC total n=56);

2016/2017 Goals– Training of protocol at Kessler Year 3

Dr William Bauman trained sites on testosterone/ placebo application
 Training for drug and ST+ES meeting Kessler and JJPVC 11.21.16.
 Training for all testing outcomes Kessler and JJPVC 11.21.16. UoL completed training 1.17.17-1.18.17. Electronic Data base set up for JJPVC, UoL and Kessler completed

Study recruitment, screening (All three sites), randomization, subject training commenced. All sites have pre screened 68, screen consented and screened enrolled 18, main consent enrolled 3, 2 completed training and in follow-up period. One person is currently training. **Comments/Challenges**

/Issues/Concerns: Timeline delayed due to issues associated with obtaining Drug and signing of contractual agreements with drug company (see Problems and Issues in report). **Budget Expenditure to Date** (Comments/ Challenges/ Issues/ Concerns. Actual Expenditure \$321,291 total (through 14- July, 2017)
