Making a Case:

Scientia est Virtus

“When It Comes To Future Technology...”

- Legacy Tools To Improve Understanding Are Insufficient

Making a Case:

Scientia est Virtus

”When It Comes To Future Technology...”

- Legacy Tools To Improve Understanding Are Insufficient
- New Tools/Perspectives Are Absolutely Necessary

The Forcing Function

Scientia est Virtus

Increasing
Complexity

Classic Ways to Deal With Complexity

Scientia est Virtus

- Reductionism:
- Statistics:

Classic Ways to Deal With Complexity

Scientia est Virtus

- **Reductionism:**
 - The whole may be explained as the sum of its parts
 - Divide, explain, predict phenomena at more simpler levels
- **Statistics:**

Classic Ways to Deal With Complexity

Scientia est Virtus

- **Reductionism:**
 - The whole may be explained as the sum of its parts
 - Divide, explain, predict phenomena at more simpler levels
- **Statistics:**
 - The system is a structureless mass with inputs and outputs
 - Components are sufficiently regular and random in their behavior
 - Law of Large Numbers: quantify the distribution of the output and relate to the inputs

Limitations of Reductionism

Scientia est Virtus

- Natural Sciences:
 - Reductionism...perhaps best suited for natural sciences
 - Still has limitations in chemistry/biology – emergent/macroscopic behaviors
- Psychology/human factors:
 - May have poor external validity (human systems, context matters!)
 - Attribution of unique/biased meanings to data
 - Predictions influencing observations
- Social Sciences:
 - Rich variety of observable phenomena in sociotechnical systems
 - How to define system research question
 - Large quantity / poor control of data
- In general, uncertainties can have disproportionately large impact

“Wicked” region: As complexity increases, the limitations of scientific reductionism become more apparent

Limits of Statistics

Complicated

- Example: Airplane
- Predictable
- Not as prone to surprise
- Distribution: Gaussian (bell curve)

Complex

- Example: Air traffic
- Can appear predictable
- Susceptible to great surprise
- Distribution: Heavy Tailed

“Black Swan” Distributions

Complicated

- Example: Airplane
- Predictable
- Not as prone to surprise
- Distribution: Gaussian (bell curve)

Complex

- Example: Air traffic
- Can appear predictable
- Susceptible to great surprise
- Distribution: Heavy Tailed

Methodologies (Weinberg, 1975)

Component Failure Vs System Behavior

Scientia est Virtus

Component Failure Vs System Behavior

Scientia est Virtus

Component Failure Vs System Behavior

Scientia est Virtus

- Unsafe Scenarios are unsafe system behaviors
- Can reliability-based analyses be adapted to software and humans?
 - No
 - Software and humans do not 'fail' like a physical component

An Example: Internet of Things

Scientia est Virtus

Libelium Smart World

A graphic showing a highly complex ecosystem.

Do Flight Testers Operate In this Environment?

How hard is this to model? Test? Secure?

What's Important? What isn't?

An Example: Internet of Things

Do Flight Testers Operate In this Environment?

How hard is this to model? Test? Secure?

What's Important? What isn't?

History

1940 1950 1960 1970 1980 1990 2000 2010

1944 • Established at Wright Field

1951 • Moved to Edwards AFB

1961 • Aerospace Research Pilot (ARP) Course Added
• Renamed USAF ARPS

1972 • ARP Course Terminated; Renamed USAF TPS
• Systems Phase Added

1973 • FTE Program Initiated

1977 • FTN Program Initiated

1990 • TMP Phase Added

2008 • MS FTE

2011 • RPA Gra

TPS Legacy Model: Phase Perspective

Scientia est Virtus

- Implies a linear progression from one phase to the next; roots in our history → 6 mo + 6 mo
- Inappropriately suggests mutual exclusivity of content

TPS Legacy Model: Phase Perspective

Scientia est Virtus

- Implies a linear progression from one phase to the next; roots in our history → 6 mo + 6 mo
- Inappropriately suggests mutual exclusivity of content
- *Model is not scalable to new challenges*

Re-Think TPS Curriculum

REPORT DOCUMENTATION PAGE				Form Approved OMB No. 0704-0188	
Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.

12. DISTRIBUTION / AVAILABILITY STATEMENT Approved for public release A: distribution is unlimited.					
13. SUPPLEMENTARY NOTES Flight Test Safety Workshop, Charleston, South Carolina					
14. ABSTRACT The United States Air Force (USAF) Test Pilot School (TPS) has undertaken a substantial initiative to prepare its graduates for the challenges of the 21 st century. Recent geo-political realities and advances in technologies have motivated USAF TPS curriculum managers to improve their syllabus to better support the advancing needs of the USAF flight test community. An interpretation of survey data concerning challenges faced by USAF flight test teams can be distilled into a single word: complexity. The emergence of intelligent interconnected solutions in social-technical environments has substantially outpaced the efficacy of traditional tools in these situations with a corresponding negative effect on emergent behaviors such as safety. For almost 15 years, the USAF TPS education strategy has been to be as domain agnostic as possible. USAF TPS believes it has had a measure of success with this strategy. The reality is also the advent of technical complexities such as cyber all have characteristics which drive the need for new tools. The assumption is, if USAF TPS does not adapt its curriculum to face increasing complexity and only continues to train legacy techniques and tools, its graduates will not be prepared to deal with the future.
