

Award Number: W81XWH-14-1-0173

TITLE: Evaluation of the King-Devick Test to Assess Eye Movements and the Performance of Rapid Number Naming in Concussed and non-Concussed Service Members

PRINCIPAL INVESTIGATOR: Dr. Michael Dretsch

CONTRACTING ORGANIZATION: The Geneva Foundation
917 Pacific Ave., Ste. 600
Tacoma, WA 98402

REPORT DATE: JULY 2019

TYPE OF REPORT: Annual

PREPARED FOR: U.S. Army Medical Research and Materiel Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT:

Approved for public release; distribution unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

REPORT DOCUMENTATION PAGE				Form Approved OMB No. 0704-0188	
Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202- 4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.

Introduction

The primary study objective is to determine the concurrent validity, sensitivity, and specificity of the King-Devick Test to cognitive impairment of attentional processes associated with acute mild traumatic brain injury (mTBI) in service members. The secondary objective is to explore the neurophysiological and neurostructural changes in the brain associated with both combatives training and acute concussion. In addition, we will explore changes in microRNA and other small molecules as potential biomarkers of mTBI.

Keywords

MTBI, concussion, neurocognitive

Accomplishments

What were the major goals of the project?

- 1) Initiate, Plan and Design Study [Months 2-3]
- 2) Execute Study (collect and analyze data) [Months 3-9]
- 3) Conclude Study [Month 10]

What was accomplished under these goals?

Data have been collected under two protocols.

- 1) (A-18002) Evaluation of the King-Devick Test to Assess Eye Movements and the Performance of Rapid Number Naming in Concussed and Non-Concussed Service Members. (151 enrolled with baseline data. 99 of which also have post-training assessments. 33 of which also have post-injury assessments.
 - a. Manuscript under review with the journal *Brain Injury*.
- 2) (A-18002.2) Imaging Assessment of Neurological Changes Associated with Subconcussive and Concussive Events in US Soldiers. [Control group (n=32). mTBI group (n=4)]
 - a. Data pre-processed and ready for analysis and writing up reports.

*All recruitment, enrollment, and data collection has ceased. No additional enrollment and data collection will occur.

*Respective protocols closed.

What opportunities for training and professional development has the project provided?

Nothing to Report

How were the results disseminated to communities of interest?

Nothing to Report

What do you plan to do during the next reporting period to accomplish the goals?

Analyze MRI data for second manuscript to be published in peer reviewed journal.

Impact

The findings from this project has the potential to impact policy for screening concussion during training in CONUS. The secondary and tertiary effects may result in continued research within other military populations and operational environments. This policy change would come through dissemination of findings to USAMRDC, MEDCOM, OTSG, and DVBIC. The results of the second protocol aimed at exploring the neuroanatomical substrates associated with

concussion related decrements. The results will inform the community of the sensitivity and specificity of various brain imaging techniques to relevant neurocognitive measures.

What was the impact on the development of the principal discipline(s) of the project?

Nothing to Report

What was the impact on other disciplines?

Nothing to Report

What was the impact on technology transfer?

Nothing to Report

What was the impact on society beyond science and technology?

Nothing to Report

Changes/Problems

Changes in approach and reasons for change

Nothing to Report

Actual or anticipated problems or delays and actions or plans to resolve them

Nothing to Report

Changes that had a significant impact on expenditures

Nothing to Report

Significant changes in use or care of human subjects, vertebrate animals, biohazards, and/or select agents

Nothing to Report

Products

Nothing to Report

Participants & Other Collaborating Organizations

What individuals have worked on the project?

Name:	Dr. Michael Dretsch
Project Role:	Principal Investigator
Researcher Identifier (e.g. ORCID ID):	
Nearest person month worked:	
Contribution to Project:	Dr. Dretsch serves as the overall study PI on this research project.

Name:	
Project Role:	
Researcher Identifier (e.g. ORCID ID):	
Nearest person month worked:	
Contribution to Project:	

Has there been a change in the active other support of the PD/PI(s) or senior/key personnel since the last reporting period?

Nothing to Report

What other organizations were involved as partners?

Auburn University MRI Research Center will be providing structural brain scans under a second protocol in order to assess changes in the brain associated with both combatives training and concussion.

Organization Name:

Auburn University

Location of Organization: (if foreign location list country)

Partner's contribution to the project (identify one or more)

- ☐ Financial support;
- ☐ In-kind support (e.g., partner makes software, computers, equipment, etc., available to project staff);
- ☐ Facilities (e.g., project staff use the partner's facilities for project activities);
- ☒ Collaboration (e.g., partner's staff work with project staff on the project);
- ☐ Personnel exchanges (e.g., project staff and/or partner's staff use each other's facilities, work at each other's site); and
- ☐ Other

Special Reporting Requirements

None

Collaborative Awards

Quad Charts

The Quad Chart (available on <https://www.usamraa.army.mil>) shall be updated and submitted as an appendix.

Appendices

None

Evaluation of the King-Devick Test to Assess Eye Movements and the Performance of Rapid Number Naming in Concussed and Non-Concussed Service Members

Log Number 12089007

W81XWH-14-1-0173

PI: Dr. Michael Dretsch

Org: The Geneva Foundation

Award Amount: \$500,671

Study/Product Aim(s)

- Main Study Aim is to evaluate the ability of the King-Devick test to accurately detect concussions in Soldiers; Does the Post Incident K-D Test vary from the individual's pre-combatives baseline assessment?

•Additional Aims:

- b. Does the** pre-combatives baseline K-D Test assessment of individuals who report a history of concussion on their baseline questionnaires vary from the pre-combatives baseline K-D Test assessment of individuals who have not reported a prior concussion event
- c. Does the** post-combatives K-D Test assessment vary from the pre-combatives baseline assessment in healthy individuals who do not suffer a concussive event.

Approach

- Subjects will be recruited at the Fort Benning Combatives School, and other Combatives training
- Recruitment will occur on the first day of training during Soldiers' in-processing
- Any Soldier that volunteers to participate will be given the informed consent and HIPAA documents
- Any volunteers that agrees to the consent process will be given a pre-combatives questionnaire and K-D test before training begins
- Volunteers who suffer a concussive event during training will be given a post-incident questionnaire (which includes the MACE and GCS) and K-D test within 24 hours after the event occurs
- Volunteers who do not have a concussive event during training will be given a post-training questionnaire and K-D test on the last day of their training
- Recruitment and testing will be conducted until 100 concussed Soldiers have been tested
- A brain imaging arm of the study will recruit from enrolled subjects, but will occur at Auburn University

Picture above shows the King-Devick test card. Each participant will be start with the demonstration card and continue through each test. Participants are instructed to read the numbers from left to right, and are informed that it is a timed event. Average test time is less than two minutes.

Timeline and Cost

Activities	CY	15	16	17	18	19
Finalizing protocol documents, training employees, meeting with post personnel, and awaiting IRB approval						
Approved protocol. Hire additional study personnel, complete training.						
Data collection; data analysis						
Complete data analysis, and publish findings						
Estimated Budget (\$500,671)		99,540	201,835	102,295		

Updated: 28JUN2019

Goals/Milestones

CY18 Goals –

- Finish data analysis and complete report and manuscripts

Comments/Challenges/Issues/Concerns

- Processing of MRI data was slow. However, analysis is underway.

CY19 Goals –

- Submit manuscript on K-D test results for peer reviewed publication.
- Complete MRI data analysis
- Submit manuscript on neuroimaging protocol to peer reviewed journal.

Budget Expenditure as of 06.28.2019

Projected Expenditure: \$500,671

Actual Expenditure: \$494,722
