

AWARD NUMBER: W81XWH-19-1-0023

TITLE: Biopsychosocial Mechanisms of Chronic Pain Recovery and Maintenance

PRINCIPAL INVESTIGATOR: Krista Highland, PhD

CONTRACTING ORGANIZATION: Henry M. Jackson Foundation, Bethesda, MD

REPORT DATE: October 2022

TYPE OF REPORT: Annual

PREPARED FOR: U.S. Army Medical Research and Development Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release; Distribution Unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

REPORT DOCUMENTATION PAGE

Form Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. **PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.**

1. INTRODUCTION:

Many military service members, veterans, and their family members have chronic pain; which in turn, negatively impacts quality of life, retention, and readiness. Though many studies show how people develop chronic pain, less is known about how people recover from it. To improve chronic pain management, the goal of this study is to understand how emotional, social, and biological factors predict who recovers from chronic pain and who does not. Samples and self-report data of 150 individuals (50 chronic pain maintained, 50 chronic pain improved, 50 controls) will be analyzed to identify biopsychosocial markers that predict chronic pain resolution.

2. KEYWORDS:

Chronic pain, biomarkers, microRNA, integrative pain management

3. ACCOMPLISHMENTS:

What were the major goals of the project?

CY19 Goals
Functionality tests of integrated firmware and software (complete)

CY20 Goals
Obtain IRB approval (complete)
Obtain Biobank sample request forms (complete)
Complete agreements (complete)

Remaining goals on hold due to COVID 19 Pandemic:

CY20 Goals
Identify psychosocial/behavioral factors distinguishing groups

CY21 Goals
All samples banked, aliquoted, and analyzed
Manuscript preparation on blood biomarkers

CY22 Goal
Manuscript preparation on salivary biomarkers

What was accomplished under these goals?

- An agreement between DVCIPM and WRAIR was completed.
- **NEW:** Established a relationship with the Duke University Murdock Study, in which we will be able to receive 50 control samples with the required data. Therefore, we only need to obtain specimens and data on 50 improved versus maintained.
- Updated Regulatory Documentation sent to USAMRAA HRPO

Milestones listed below are ON HOLD due to COVID-19 Pandemic:

Milestone 2: Identification of psychosocial and behavioral factors distinguishing groups [original target date 1MAY2020]

Milestone 3: All samples banked and aliquoted. [original target date 1MAY2021]

Milestone 4: Manuscript on the biopsychosocial predictors of chronic pain maintenance and recovery. Depending on results, there will likely be a need to divide results into 2-3 manuscripts.

What opportunities for training and professional development has the project provided?

Nothing to Report

How were the results disseminated to communities of interest?

Nothing to Report

What do you plan to do during the next reporting period to accomplish the goals?

1. Continue to work with the Pain Registry Biobank administrators and scientist to obtain samples as soon as they become available. This includes the approval of the Pain Registry Biobank sample and data request. We are maintaining weekly communication with the Biobank leadership to ensure we are aware of when samples will become available.
2. Complete agreements and obtain samples from the Duke University Murdock Study
3. **Amend all agreements with WRAIR to obtain samples and within** the next year, we plan to have all samples transferred to WRAIR for analysis
4. Begin manuscript development

4. IMPACT:

What was the impact on the development of the principal discipline(s) of the project?

Nothing to Report

What was the impact on other disciplines?

Nothing to Report

What was the impact on technology transfer?

Nothing to Report

What was the impact on society beyond science and technology?

Nothing to Report

5. CHANGES/PROBLEMS:

Changes in approach and reasons for change

Nothing to Report

Actual or anticipated problems or delays and actions or plans to resolve them

No cost extension (NCE) was approved through 29 Sep 2023.

The COVID19 Pandemic is having large impact on the timeline of this study, not only for obtainment of samples, but also the continued progress on other study aims and goals; as employee time and laboratory access will be limited (COVID-related studies are taking precedent in the current environment; as such, there will be a deluge of backlog items that the study team will need to complete once operations are back to normal). Though NMC-SD Pain Registry Biobank site was recruiting prior to the COVID19 Pandemic, recruitment was then halted at NMC-SD (Pain Clinic) due to COVID19 Pandemic. To mitigate these challenges, the PI has worked extensively with the Pain Registry Biobank to develop logistics for recruitment to enable fastidious recruitment into the Pain Biobank that target the samples needed for the present study, whenever the COVID19 Pandemic impact is no longer present. Moreover, the Biobank's WRNMMC recruitment site incurred significant challenges in recruiting both controls and cases due to the COVID-19 Pandemic. As a result and given the PI's excellent relationship with the WRNMMC Department of Research Programs, they discussed alternative recruitment strategies that could be used by any WRNMMC study, including the Biobank. As such, the research manager of the Biobank is now awaiting an amendment determination and signature to allow for "passive" recruitment (e.g., having a table in the hallway of the WRNMMC America building ground floor and in the different recruitment clinics, as well as leveraging a partial HIPAA waiver to be able to consent participants over the phone prior to their scheduled appointment. We have also established a relationship with the Duke University Murdock Study in order to obtain control biospecimens and data from their existing biobank repository, after agreements are complete. Obtaining control samples was the most difficult recruitment target for the Pain Biobank.

Note: due to the COVID19 Pandemic, study activities were placed on hold and then restarted, but at a much lower pace. As such, study funds have not been able to be used.

Significant changes in use or care of human subjects, vertebrate animals, biohazards, and/or select agents

Significant changes in use or care of human subjects

Nothing to Report

Significant changes in use or care of vertebrate animals

Nothing to Report

Significant changes in use of biohazards and/or select agents

Nothing to Report

6. PRODUCTS:

- **Publications, conference papers, and presentations**

Journal publications.

Nothing to Report

Books or other non-periodical, one-time publications.

Nothing to Report

Other publications, conference papers and presentations.

Nothing to Report

- **Website(s) or other Internet site(s)**

Nothing to Report

- **Technologies or techniques**

Nothing to Report

- **Inventions, patent applications, and/or licenses**

Name: Dr. Aarti Gautam
Project Role: Project Co-I
Research Identifier: NA
Nearest person month worked: 0.01
Contribution to Project: no change

Has there been a change in the active other support of the PD/PI(s) or senior/key personnel since the last reporting period?

Dr. Highland's active (and future active) support will not have any impact on the effort required for the present award.

What other organizations were involved as partners?

Nothing to Report

8. SPECIAL REPORTING REQUIREMENTS

COLLABORATIVE AWARDS:

QUAD CHARTS:

9. APPENDICES:
