# Carnegie Mellon University (CMU)

## Pioneering discoveries that enrich the lives of people on a global scale

- Turning disruptive ideas into success through leading-edge research
- 2021 *U.S. News and World Report* rankings:
  - #1 in computer engineering, AI, cybersecurity, and software engineering
  - #2 in overall computer science
  - #3 in data analytics/science

# CMU Software Engineering Institute (SEI)

## Bringing innovation to the U.S. government

- A Federally Funded Research and Development Center (FFRDC) chartered in 1984 and sponsored by the DoD
- Leader in researching complex software engineering, cyber security, and artificial intelligence (AI) engineering solutions
- Critical to the U.S. government's ability to acquire, develop, operate, and sustain software systems that are innovative, affordable, trustworthy, and enduring

# The CERT Division: Birthplace of Cybersecurity

## **Trusted**

Conducting research for the U.S. Government in a non-profit, public-private partnership

## **Valued**

Collaborating with military, industry, and academia globally to innovate solutions

## **Relevant**

Achieving technology and talent results for our mission partners

# Risk Appetite

- How appetite fits into a program
- A brief discussion on governance
- Defining appetite
- Developing an appetite statement
  - Potential examples of an appetite statement

# Risk Programs

*Where do we begin building?*

- There are three fundamental elements that underpin a risk program
  - **Governance** – A body that provides authority, advocacy, and a decision making
  - **Appetite** – A central understanding of risk attitude that provides quantitative constraints for analysis and prioritization
  - **Policy and Procedure** – Provides direction and tools needed
- Program development may only be necessary one time
  - Periodic update and maintenance accommodate organizational change
- Program should be tailored to meet scope and scale requirements

*This Presentation is Scaled to Meet Customer Needs Starting with Executives Through Practitioner*

# Implementing Risk Appetite

## *Linked to Culture, Drives Decisions*

### **ISO 31000:**

*“Amount and type of risk that an organization is prepared to pursue, retain or take.”*

*“An organization’s approach to assess, and eventually pursue, retain, take or turn away from risk.”*

### **Institute for Risk Management:**

*“The amount and type of risk that an organization is willing to take in order to **meet their strategic objectives.**”*

*Tolerance is, “...the amount of risk an organization can actually cope with.”*

# Risk Program Governance

## *Empowering Executives and Management to Manage Risk*

- A tiered committee structure is effective
  - Tiers may include board level executives down through practitioners
  - Risks, decisions, and direction should flow up and down the tier structure
  - Each level communicates and relates through the use of an appetite statement

### **Executive Board**

- Senior Executives
- Set Strategic Direction
- Institutes Authority into the Governance Structure

### **Risk Committee**

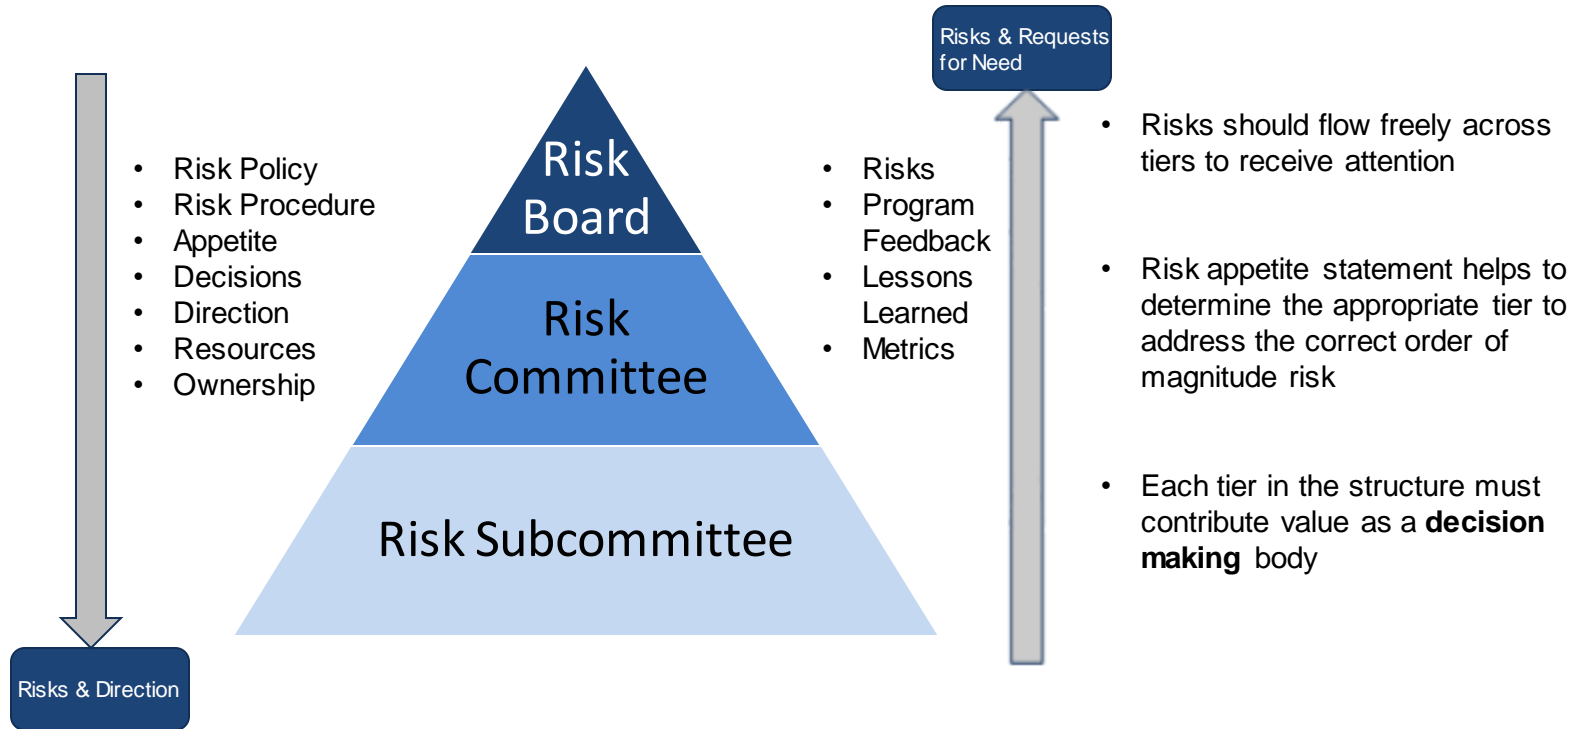

- Executive Level Leaders from Across the Organization
- Set Policy
- Provide Advocacy

### **Risk Subcommittee(s)**

- High Performing Managers
- Enforce Policy and Oversee Process
- Provide Resources

# What Does the Governance Structure Do?

*Each Tier Contributes to the Process*

# Risk Appetite Statement

## *Quantify and Prioritize Risk*

Why do we need it?

- Define how much risk is tolerable in pursuit of strategic objectives
- Appetite derives from the organization's inclination to seek or avoid risks
- Appetite statement assists in analyzing and prioritizing risks

Look at it this way:

- Organizational strategy is the highway to follow to achieve objectives
- Risk appetite is the guard rail

# Developing a Risk Appetite

## *Practical Ideas on Building One*

*“The risk appetite statement is generally considered the hardest part of any enterprise risk management implementation. However, without clearly defined, measurable tolerances the whole risk cycle and any risk framework is arguably at a halt.”*

*- Jill Douglas, Head of Risk, Charterhouse Risk Management*

- Senior management must provide input
- Strategy documents provide a starting point
- Categories come from stated strategic values
- Individual interviews are recommended
- Board should approve

# Examples of Risk Appetite Statements

*There is NO standard*

- High level statements
  - “...do not take action that may degrade the value of the firm.”
- Add clarity with categorization and possibly some quantification
  - “...do not take any operational action that may erode profits more than 10% per quarter.”
- Make statement(s) concrete for decision makers
  - “...make capital investment that reduces the number unplanned outages to no more than 1 per quarter.”
- Regardless of the type, the appetite should support strategic planning and day-to-day decision making

# Linking to Appetite to Strategy

*Making ERM part of corporate culture*

- **Appetite must be aligned with strategy**
  - Categories aligned
  - Appetite should **provide a means to make decisions** that meet strategic objectives
- ERM appetite and process should support immediate tactical decisions as well as long term strategic ones
- Indication of maturity will come with regular use at various levels in the organization

# Example of a Risk Appetite Statement

## Quantitative and Functional

	Revenue (Operating Profit)	Safety	Operations	Reputation	Compliance	Human Capital	Projects
<b>Escalate to Executive Attention</b>	Any more than a 10% deviation from planned operating profit for a quarter	Loss of life or permanent disability	No more than three days of lost operations	Loss of market segment with multiple customers	Debarment from a particular market segment linked to regulatory violation(s)	Any more than 5% high performer attrition from any business unit in a quarter	Liquidated damages that exceed contract value
<b>Escalate to Management Attention</b>	Any more than a 5% deviation from planned operating profit for a quarter	Time away or other reportable incident	No more than one day of lost operation	Loss of customer	Any fines or other penalties linked to regulatory violation(s)	Any more than 3% high performer attrition from any business unit in a quarter	Liquidated damages that erode the margin as sold
<b>Provide Front Line Attention</b>	Any deviations from planned operating profit for a quarter	Bumps, strains, bruises	No more than one shift of lost operation	Customer complaints or negative social media buzz	Any warnings linked to regulatory violation(s)	Any developing trend in high performer attrition	Minor disputes with limited contractual impact

***Appetite May Also be Characterized by Likelihood, Adaptability, and Others***

- Key is to prioritize risks based on defined criteria
- This is an example of an impact-based risk appetite statement
- Categories and values will differ depending upon the organization and its strategic goals

# Example of a Risk Appetite Statement (continued)

*Other Aspects of Risk May be Used to Gauge Appetite*

	Likelihood -- Probability of Risk Occuring
<b>Executive Attention</b>	Risk is between <b>75 - 99%</b> likely to occur. Alternatively, this risk has come to fruition within the industry within the past year.
<b>Management Attention</b>	Risk is between <b>30 - 74%</b> likely to occur. Alternatively, this risk has come to fruition within the industry within the past two years.
<b>Front Line Attention</b>	This risk is between <b>1 - 29%</b> likely to occur. Alternatively, the risk has come to fruition within the industry within the past 5 years.

	Controllability - Progress in Responding to a Risk
<b>Executive Attention</b>	No funding provided -- No business case may exist to justify resource commitment
<b>Management Attention</b>	Funding provided and implementation of response plan in progress
<b>Front Line Attention</b>	Response plan implemented and effectiveness is being monitored

- These appetite statements may be coupled with the impact statement
- Values may differ per organization
- For likelihood, there is a difference between risk occurrence and impact realization
- Not all response plans must be acted upon, especially in a financially constrained environment

# Example of Appetite Visualized

## Heat Maps Provide Priority at a Glance

Projected residual risk index from inherent scores, With implemented responses

Number	Risk
1	Cyber Breach – Loss of PCI
2	Workforce Walkout
3	Debarment from a Market
4	Loss of Reputation
5	Deadly Safety Incident
6	Overregulation
7	Collapse of Economy
8	Regional Conflict
