Core DoD Policies and Governance

- Federal Information Processing Standards Publication 199 (FIPS-199)
- Committee of National Security Systems (NCSSI) 1253 – Categorization and Control Selection for National Security Systems
- Department of Defense Instruction (DoDI) 8500.01 - Establishes the positions of DoD principal authorizing official (PAO) and the DoD Senior Information Security Officer (SISO) and continues the DoD Information Security Risk Management Committee
- DoDI 8510.01 – Risk Management Framework for DoD Systems
 - Establishes the cybersecurity Risk Management Framework (RMF) for DoD Systems and establishes policy, assigns responsibilities, and prescribes procedures for executing and maintaining the RMF.
- National Institute of Standard and Technology (NIST) 800-37 – Guide for Applying the Risk Management Framework to Federal Information Systems

What is the Risk Management Framework (RMF)?

In 2014, the DoD started transitioning from the DoD Information Assurance Certification and Accreditation Process (DIACAP) to the Risk Management Framework for the DoD IT (RMF).

NIST Special Publication 800-37, "Guide for Applying the Risk Management Framework to Federal Information Systems", transforms the traditional Certification and Accreditation (C&A) process into the six-step Risk Management Framework (RMF).

The Risk Management Framework (RMF) provides a disciplined and structured process that integrates information security and risk management activities into the system development lifecycle.

DoD Risk Strategy

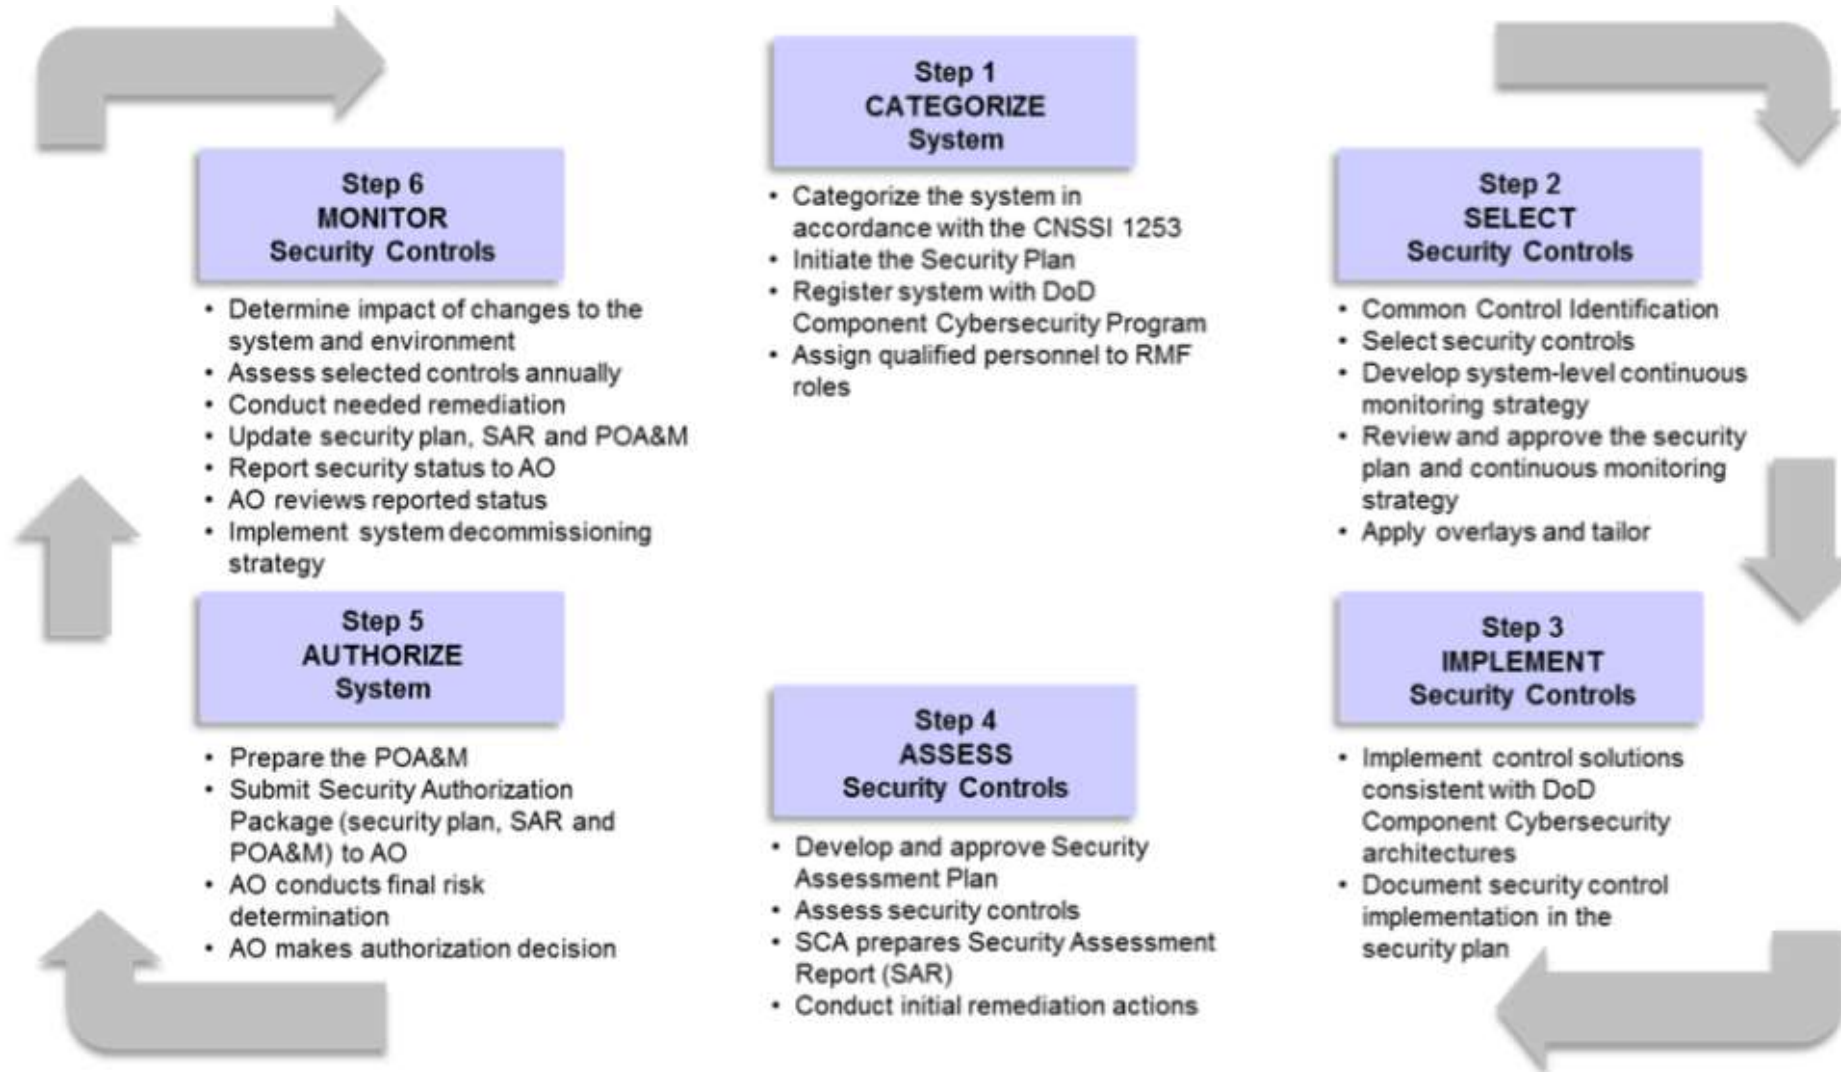

Authorizing Official (AO):

- Render authorization decisions for DoD Information Systems (IS) and Platform Information Technology (PIT) systems under their purview
- Establish guidance for and oversee IS-level risk management activities consistent with Commander, USSTRATCOM, and DoD Component guidance and direction.
- DoD officials with the **authority to assume responsibility formally for operating DoD ISs or PIT systems at an acceptable level of risk to organizational operations** (including mission, functions, image, or image, or reputation), organizational assets, individuals, other organizations, and the Nation.

The RMF Process

DoD System Lifecycle and RMF

<http://www.truestonefed.com/wp-content/uploads/2016/09/risk-management-wheel.gif>

The RMF/ATO Problem

Every system has **inherent risks** associated with it.

Program Manager (PM) is **graded** against the system's **KPP** and their compliance with all **regulations**, along with **cost** and **schedule** parameters.

PM makes **trades** between cost, schedule, quality, and functionality. With each trade **residual risks** occur.

Someone must **accept ALL residual risk** associated with the system before placing it into operations.

The Authorizing Official (AO) is responsible to **accepting information security risks**, which is done through the RMF process.

An ATO is usually good for 3 years, but **assumes no major changes** to the system's cybersecurity posture will be made during that time.

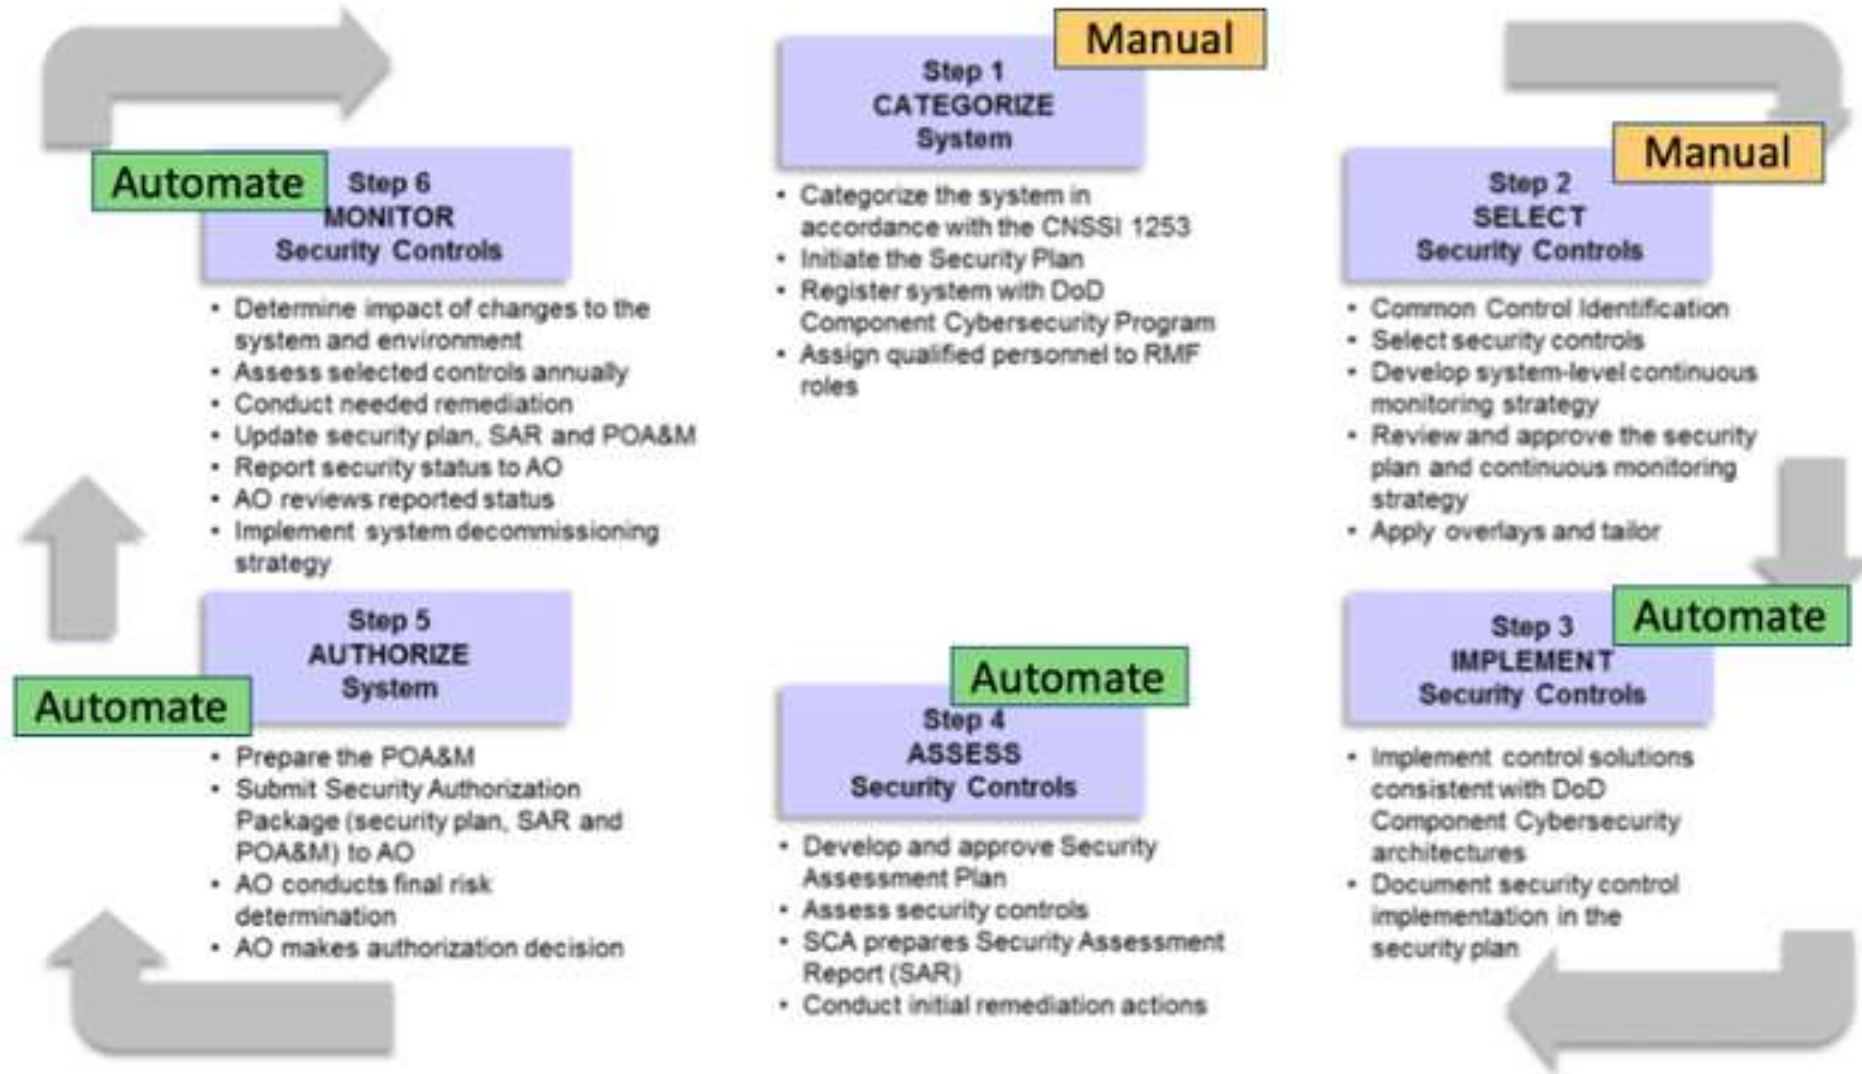

When **changes** do occur the AO may require a **reassessment** and **reauthorization**, which impacts the PM's cost and schedule and ability to deliver capability to the warfighter.

RMF's Solution to Problem

RMF encourages an alternative approach to the traditional 3 year ATO process through ongoing authorization decisions or continuous reauthorization.

RMF assumes these systems have “been evaluated as having sufficiently robust system-level continuous monitoring programs”

The Goal
