**STEM Degrees:** 0

**STEM Participants:** 100

**Major Goals:** The project was aimed at supporting the LEES 2021 conference to provide a forum for the exchange of ideas, novel concepts, and unpublished results in interdisciplinary research on low-energy electrodynamics in solids and in exotic condensed phases. Experts in a wide range of theoretical and experimental techniques focused on the electrodynamics of quantum materials will join with up-and-coming junior researchers.

**Accomplishments:** The LEES conference was successfully held in the summer of 2021. It had over 400 participants, with ~ 25% being graduate students and another 20% being postdocs. In addition participants and speakers were involved from Europe, the US, Canada, South America and Asia. There were 54 talks and over 40 poster presentations. Cutting-edge results from a wide array of spectroscopic techniques and quantum materials were presented.

**Training Opportunities:** The conference offered numerous opportunities for junior personnel (graduate students and postdocs) to present their work and network with science leaders in their fields. The conference was also free, enabling a broader array of junior participants.
