

AWARD NUMBER: W81XWH-17-0589

TITLE: Targeting Diet-Microbiome Interactions in the Pathogenesis of Parkinson's Disease

PRINCIPAL INVESTIGATOR: Sarkis K. Mazmanian, PhD

CONTRACTING ORGANIZATION: California Institute of Technology, Pasadena, CA

REPORT DATE: December 2022

TYPE OF REPORT: Final

PREPARED FOR: U.S. Army Medical Research and Development Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release;
Distribution Unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

REPORT DOCUMENTATION PAGE

Form Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. **PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.**

1. **INTRODUCTION:** The current project will analyze the gut microbiome and metabolites from PD patients and controls, and employ clinically relevant mouse models to determine how metabolites produced by the microbiome from dietary substrates affect motor symptoms. We propose to test whether directly regulating microbial metabolite profiles using “designer” dietary fibers and probiotics offers new avenues for ameliorating PD-like symptoms. We have succeeded in hitting 100% of 4 year enrollment target goal for human subjects recruitment (56/56). RUMC goal for the final reporting period was additional 44 subjects which we successfully recruited 100% which were part of the UW site but RUMC had consented to enroll as part of the project after DoD approval for the subaward. We have also made remarkable progress on the animal studies, defining specific diets that impact motor deficits in a mouse model of PD, and initiating mechanism of action studies. We have advanced the objectives of the project either on time, or in some cases, ahead of schedule. This project has resulted in multiple high-profile publications, including two major papers published in the last few months of the award (see below). The project has, to date, not experienced any major setbacks outside of basic issues related to the COVID19 pandemic.

2. **KEYWORDS:** *Parkinson’s disease, human subjects, intestinal microbiome, stool specimens, gut-brain axis, intestinal bacteria, dietary fiber, short chain fatty acids*

3. **ACCOMPLISHMENTS:**

▪ **What were the major goals of the project?**

Major Task 1: Recruitment and Microbiome Sequencing

Subtask 1- subject recruitment and sample collection.	12 month target of 12 human subjects with stool and tissue collection successfully recruited.	100% completed
Subtask 2- microbiome sequencing / metagenomics.	24 month timeline.	100% completed
Subtask 3- SCFA analysis for stool and serum.	12 month timeline.	100% completed

Major Task 2: Animal colonization and phenotyping

Subtask 1 – colonization of mice with human microbiota	36 month timeline.	100% completed
Subtask 2 – microbiome profiling.	36 month timeline.	100% completed
Subtask 2 – motor testing, neuroinflammation status.	36 month timeline.	100% completed
Subtask 3 – AAV cloning and injection.	6 month timeline.	100% completed
Subtask 4 – CLARITY analysis and electrophysiology.	36 month timeline.	100% completed

Major Task 3: Fiber testing and treatment of animals

Subtask 1 – treat PD mice with fibers and motor tests.	12 month timeline.	100% completed
Subtask 2 – treat PD mice with “optimized” fibers & test	36 month timeline.	100% completed

- **What was accomplished under these goals?**

Activities accomplished in this quarter include: 1) completely reached our 60 month goal for recruitment, with the target of 100 subjects; 48 subjects have now been recruited; 2) colonization of germ-free WT and ASO mice with human microbiota; 3) SCFA treatment of SPF mice followed by motor testing; 4) feeding of SCFAs to SPF mice and analysis of neuroinflammation; 5) production and treatment of animals with prebiotic fibers, 6) motor testing mice fed prebiotic fibers; 7) microglia analysis by RNAseq of SCFA fed mice. We are excited to report that acetate feeding to SPF animals showed an effect on motor symptoms. Namely, feeding designer prebiotic diets enriched in 20% butyrate or acetate promoting fibers each improved motor symptoms in mice, whereas the 20% propionate fiber diet did not have this effect, showing specificity for different SCFAs in our mouse model of PD. Further, we show that butyrate reduces activation of microglia in vitro, and thus may affect neuroinflammation in vivo. Finally, we have profiled the transcriptome of microglia from brain regions of mice fed SCFAs, and find preliminarily very interesting results that we will fully describe in the next Quarterly Progress Report. There have been no setbacks or failures to achieve a goal, and the project is progressing on the proposed timeline or in some cases such as the microglia studies, ahead of schedule. Finally, we have published 3 major papers in this reporting cycle, all supported by DoD funding.

What opportunities for training and professional development has the project provided?

Research. *Trainees meet weekly with the PI, both separately and together, to discuss their latest results, technical problems, collaborations, reagent needs and so forth.*

Group Meeting & Scientific discussions. *The Mazmanian laboratory holds formal 2 meetings every week, one for research updates from investigators and the other to discuss literature. Each week a group member presents their work. Often, we have PIs, students and fellows from other laboratories join in our weekly meetings. Each trainee presents their work approximately every 4 weeks to the entire group. These lab meetings cover a range of topics, from immunology, neuroscience, behavior to microbiology to animal models of disease. We frequently discuss relevant papers in the field and how they impact the research in our laboratory. Furthermore, each trainee participates in Caltech's vigorous seminar program in which outside scientists come to Caltech to present their research. They also have the opportunity to participate in the weekly "BioLunch", which features two half-hour presentations every week by a student and/or postdoc, thereby providing excellent exposure to ongoing projects in the Biology Division. Further, the 2 postdoctoral fellows will present their work once a year in a campus-wide seminar series called "Micro Mornings", where members of the microbiology community at Caltech discuss their work in front of an audience of peers that include not only biologists, but chemists and engineers as well. The diverse feedback from this worthwhile helps students and fellows craft dynamic research programs. In addition, the students and fellows in the laboratory organize their own weekly journal club, practice talks and brainstorming sessions, often without me.*

Mentoring. *The PI mentors each trainee on science, their careers, ethics, scientific strategy, interpersonal relationships, oral and written communication, graphics, and so forth. I realize that each young scientist has different talent sets, and thus try to help each individual improve all their skills. For example, we discuss appropriate and effective ways to network, how to turn potential competitors into collaborators, how to compete (if necessary) in a collegial way, etc. We also engage in open discussions about alternative career choices in addition to preparation for obtaining and succeeding in an academic career. I view my role as*

a mentor to primarily be a resource for the scholarly, academic and personal advancement of the careers of my trainees.

Writing. In general, the PI does not write the research papers from his laboratory, but discusses content, organization and figures as the papers are planned and being written, edits to enhance the personal style of each author, and rewrites key parts if necessary. My goal is to train superb writers. Other laboratory members continually critique each other's manuscripts, grant proposals, research statements, posters, etc.

Scientific meetings and conferences. Trainees attend and present her data at 2 or 3 scientific meetings each year, either locally, nationally or internationally. All trainees have presented their findings from this project at 3 scientific meetings in the past year. This provides not only the opportunity to receive feedback and critique on the project, but to network with researchers

How were the results disseminated to communities of interest?

- 2020 Invited speaker at the Help Group annual summit
- 2020 Organizer and invited speaker at Synchrony 2020: Brain Foundation
- 2020 Invited speaker at the International Conference on Microbiome Engineering
- 2021 Invited speaker at the AAAS Annual Meeting
- 2021 Invited speaker at the Mind, Mood and Microbes Annual Meeting

What do you plan to do during the next reporting period to accomplish the goals?

1) In the Year 4 of the Project, Dr. Keshavarzian's team at RUMC will continue vigorous patient and subject recruitment and sample collection. So far we have succeeded in hitting 92% of our 4 year enrollment target goal for human subjects recruitment (45/49). 2) Microbiome sequencing and SCFA analysis are completed, and we are finalizing the single cell RBAseq of microglia from mice fed the prebiotic diet. 3) Dr. Mazmanian's group will analyze motor symptoms, neuroinflammation and pathophysiology in the "humanized" mouse models following prebiotic treatment. 4) We will evaluate the requirement for microglia in the prebiotic treated mice via microglial depletions. 5) Dr. Gradinaru's group will image brain tissues from these mice. 6) Drs. Mazmanian and Hamaker will finish the "optimized" prebiotic diets.

4. **IMPACT:** Describe distinctive contributions, major accomplishments, innovations, successes, or any change in practice or behavior that has come about as a result of the project relative to:

- **What was the impact on the development of the principal discipline(s) of the project?**
- Rush University Medical Center site and Dr. Keshavarzian's team achieved the targeted new human subject recruitment and enrollment goal (100/100 for 5 years) which is required for the success of the project. The animal studies at Caltech further corroborated the preliminary data for a role by SCFAs in motor symptoms in mice. The fecal samples from all subjects collected at Rush were sequenced at UCSD and results published in December of 2022.
- **What was the impact on other disciplines?**

Nothing to report

- **What was the impact on technology transfer?**

Nothing to report

- **What was the impact on society beyond science and technology?**

Nothing to report

5. CHANGES/PROBLEMS:

- **Changes in approach and reasons for change**

Nothing to report

- **Actual or anticipated problems or delays and actions or plans to resolve them**

Nothing to report

Changes that had a significant impact on expenditures

Nothing to report

- **Significant changes in use or care of human subjects, vertebrate animals, biohazards, and/or select agents**

Nothing to report

- **Significant changes in use or care of human subjects**

Nothing to report

- **Significant changes in use or care of vertebrate animals.**

Nothing to report

- **Significant changes in use of biohazards and/or select agents**

Nothing to report

6. **PRODUCTS:** *"Nothing to Report."*

- **Publications, conference papers, and presentations**

Report only the major publication(s) resulting from the work under this award.

- **Journal publications.**

7. PARTICIPANTS & OTHER COLLABORATING ORGANIZATIONS

- **What individuals have worked on the project?**

NAME:	Sarkis K. Mazmanian, PhD
PROJECT ROLE:	PI, and Caltech Site PI
RESEARCHER IDENTIFIER:	
NEAREST PERSON MONTH WORKED:	1.20 Calendar Months
CONTRIBUTION TO PROJECT:	Dr. Mazmanian directs the overall project, as well as the Caltech site as it relates to his laboratory. He meets with the Caltech team weekly, as well as additional ad hoc meetings. He organizes and leads the monthly team call that includes the all groups involved at Caltech, Rush, Perdue, UCSD and U of Wisconsin.
FUNDING SUPPORT (If Applicable):	

NAME:	John Bostick, PhD
PROJECT ROLE:	Postdoctoral Fellow, Investigator
RESEARCHER IDENTIFIER:	
NEAREST PERSON MONTH WORKED:	6.00 Calendar Months
CONTRIBUTION TO PROJECT:	Dr. Bostick leads all studies on the mouse motor testing, neuroinflammatory analysis, and pathophysiology studies.
FUNDING SUPPORT (If Applicable):	

NAME:	Livia Hecke Morais, PhD
PROJECT ROLE:	Postdoctoral Fellow, Investigator
RESEARCHER IDENTIFIER:	
NEAREST PERSON MONTH WORKED:	12.00 Calendar Months
CONTRIBUTION TO PROJECT:	Dr. Morais leads all studies on the humanized mice.

FUNDING SUPPORT (If Applicable):	Dr. Hecke Morais was partially supported by a fellowship from the American Parkinson Disease Association.
----------------------------------	---

NAME:	Reem Abdel-Haq
PROJECT ROLE:	Graduate Student, Investigator
RESEARCHER IDENTIFIER:	
NEAREST PERSON MONTH WORKED:	12.00 Calendar Months
CONTRIBUTION TO PROJECT:	Ms. Abdel-Haq leads the prebiotic feeding studies
FUNDING SUPPORT (If Applicable):	Reem is partially supporting by graduate student fellowship.

NAME:	Yvette Garcia-Flores
PROJECT ROLE:	Senior Technician
RESEARCHER IDENTIFIER:	
NEAREST PERSON MONTH WORKED:	4.62 Calendar Months
CONTRIBUTION TO PROJECT:	Ms. Garcia-Flores supported the team with technical expertise and ordering of reagents
FUNDING SUPPORT (If Applicable):	

NAME:	Taren Thron
PROJECT ROLE:	Research Technician
RESEARCHER IDENTIFIER:	
NEAREST PERSON MONTH WORKED:	4.62 Calendar Months
CONTRIBUTION TO PROJECT:	Ms. Thron assisted the team with animal behavior studies and animal breeding
FUNDING SUPPORT (If Applicable):	

NAME:	Joseph Boktor
PROJECT ROLE:	Research Technician
RESEARCHER IDENTIFIER:	
NEAREST PERSON MONTH WORKED:	7.88 Calendar Months
CONTRIBUTION TO PROJECT:	Mr. Boktor is the lead investigator on the microbiome sequencing component of the project, and is working closely with the UCSD team
FUNDING SUPPORT (If Applicable):	

- **Has there been a change in the active other support of the PD/PI(s) or senior/key personnel since the last reporting period?**

Nothing to report

- **What other organizations were involved as partners?**

Nothing to report

8. SPECIAL REPORTING REQUIREMENTS

- **COLLABORATIVE AWARDS:** *N/A*
- **QUAD CHARTS:**

9. APPENDICES: *N/A*
