Notes:
1. Detections are shown in **bold**.
2. < = Constituent not detected at specified Sample Quantitation Limit.
   -- = Not analyzed or not applicable.
   J = The identification of the analyte is acceptable; the reported value is an estimate.
   J4 = The associated batch QC was outside the established quality control range for accuracy
   V3 = The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected.

Notes:
1.Detections are shown in bold.
2.< = Constituent not detected at specified Sample Quantitation Limit.
-- = Not analyzed or not applicable.
J = The identification of the analyte is acceptable; the reported value is an estimate.
J4 = The associated batch QC was outside the established quality control range for accuracy
V3 = The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected.

1.Detections are shown in bold.
2.< = Constituent not detected at specified Sample Quantitation Limit.
-- = Not analyzed or not applicable.
J = The identification of the analyte is acceptable; the reported value is an estimate.
J4 = The associated batch QC was outside the established quality control range for accuracy
V3 = The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected.

Cation Exchange Capacity by Method SW-9081				
Cation Exchange Capacity (meq/100g)	15.4			
Fractional Organic Carbon by Method D2974				
Fractional Organic Carbon (g C/g soil)	0.0326			

Notes:
1.Detections are shown in bold.
2.< = Constituent not detected at specified Sample Quantitation Limit.
-- = Not analyzed or not applicable.
J = The identification of the analyte is acceptable; the reported value is an estimate.
J4 = The associated batch QC was outside the established quality control range for accuracy
V3 = The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected.
