20. ABSTRACT (Continue on reverse side if necessary and identify by block number) This report contains tables of replacement parts developed by AMSAA in connection with the Vehicle Average Useful Life Study of the M39A2 Series 5 Ton Trucks, specifically, the M51A2 Dump Truck, the M52A2 Tractor, and the M54A2 Cargo Truck. The nomenclature, federal stock number, unit price, total quantity replaced, and quantity replaced per 10,000 mile interval of usage, are shown for each part used. Tables ordered by federal stock number, by total quantity replaced, and by unit price, are given for each of the three body types listed.

1. INTRODUCTION

The Army Materiel Systems Analysis Activity (AMSAA) has assessed the useful life of the M39A2 Series 5 Ton Truck by the analysis of 5,704 vehicle maintenance histories reported in the Army Integrated Equipment Record Maintenance Management System (TAERS). Specifically, 1,982 M51A2 Dump Trucks, 2,181 M52A2 Tractors, and 1,541 M54A2 Cargo Trucks were analyzed in this phase of the Vehicle Average Useful Life Study. This study, which is reported in Bell, et al., AMSAA Technical Report No. 128 resulted in an extension of the useful life of the series truck M39A2 to 20 years.

One important aspect of this study was the analysis of the type and quantity of parts replaced. To facilitate the analysis, tables showing the nomenclature, federal stock number (FSN), unit price, total quantity replaced, and quantity replaced by 10,000 mile interval of usage, were produced by computer for all parts replaced for the vehicles in the sample described above. This report contains the complete tables of replacement parts, as compiled by AMSAA. These data represent the replacement of parts, on a worldwide basis, over a total of more than 42 million miles of actual field usage. The information contained herein should assist logistics and maintenance support personnel in estimating the quantities and types of parts required for vehicles in the field, as well as assessing whether the support facilities, equipment, and training are sufficient for the replacement of the parts listed in the volume shown. Also, maintenance problems critical because of quantity or cost of parts involved can be identified. Frequent replacement of certain items reflect system design flaws or component inadequacy, such as has already been detected for the engine and batteries on the M39A2 Series. Lastly, consideration of replacements shown in these tables by engineering personnel could enhance the design of future vehicles.

The parts listed herein were reported as replaced on the vehicles in the sample during the time period 1965 to 1969. The particular mileages of the subject vehicles are delineated in terms of the average number of vehicles per 10,000 mile interval, as shown in Tables 1.1, 1.2 and 1.3.

Table 1.1 Sample Size for M51A2 Dump Truck

Mileage Interval	Average No. of Trucks
0 - 10,000	889
10,001 - 20,000	444
20,001 - 30,000	173
30,001 - 40,000	59
40,001 - 50,000	17
50,001 - 60,000	4
Over 60,000	0

Table 1.2 Sample Size for M52A2 Tractor

Mileage Interval	Average No. of Trucks
0 - 10,000	921
10,001 - 20,000	505
20,001 - 30,000	220
30,001 - 40,000	75
40,001 - 50,000	19
50,001 - 60,000	5
Over 60,000	1

Table 1.3 Sample Size for M54A2 Cargo Truck

Mileage Interval	Average No. of Trucks
0 - 10,000	553
10,001 - 20,000	191
20,001 - 30,000	76
30,001 - 40,000	48
40,001 - 50,000	44
50,001 - 60,000	33
Over 60,000	7

2. DESCRIPTION OF TABLES

Except as noted below, the following characteristics apply to the data. The FSN shown in the tables are those reported from the field and verified by U S Army Tank-Automotive Command (TACOM) and/or by use of the Army Master Data File (AMDF). The nomenclature printed is correct for the FSN listed, as determined from the above two sources, or by reference to Army Technical Manual 9-2320-211-20P. The unit price shown in FY 74 dollars, was obtained from TACOM and/or the AMDF. The quantities listed are the summations of the numbers reported from the field.

As with any data collected in the real world, certain errors and discrepancies were noted in the vehicle histories analyzed in this study. Incorrect FSN and nomenclature were discovered for some parts. When possible, data reported for incorrect FSN were matched to the correct FSN, using a reference list supplied by TACOM. Parts for which the FSN could not be verified are shown in the tables with an asterisk following the nomenclature. For these items, the FSN and nomenclature are those reported from the field; the unit price is an estimate, usually based on the nomenclature.

Each of the tables of replacement parts shown in this report contain, from left to right, the FSN, the nomenclature, the unit price, the total quantity used, and the quantity used for the mileage intervals, 0-10,000 miles, 10,001-20,000 miles, 20,001-30,000 miles, 30,001-40,000 miles, 40,001-50,000, 50,001-60,000 miles and over 60,000 miles. Of course, the number of vehicles passing through each mileage interval, and the fact that high usage vehicles might pass through several mileage intervals during the reporting period, while low usage vehicles might cover only a fraction of an interval, must be weighed when considering the number of parts used per interval. For the M51A2 Dump Truck, Table 2.1 lists the parts used in increasing order of FSN; Table 2.2 lists the same parts in decreasing order of quantity; and Table 2.3 presents the parts in decreasing order of unit price. Tables 2.4, 2.5, and 2.6 provide the same information for the M52A2 Tractor, while Tables 2.7, 2.8 and 2.9 list the parts for the M54A2 Cargo Truck in similar arrangement.
