SDCS Event Report No. 27

TADZHIK SSR, 9 April 1975

This event report contains seismic data from the Special Data Collection System (SDCS), and other sources for the above event. Published epicenter information from seismic observations is:

	Origin Time	Latitude	Longitude	m_b	M_s
NORSAR	22:25:36	37.5N	073.2E	5.4	N/A
LASA	22:25:34	38.0N	074.0E	5.5	N/A
PDE	22:25:28	38.1N	072.7E	5.5	N/A
Hagfors Array, Sweden	22:26:00	41 N	068 E	5.7	4.2

Using SDCS stations, LASA and NORSAR, the epicenter location and magnitudes become

22:25:28	39.9N	073.5E	4.8	N/A
----------	-------	--------	-----	-----

FN-WV was not operational for this event.

Short-period signals associated with this event were recorded at WH2YK, RK-ON, LASA and NORSAR.

Analysis of long-period data produced associated signals only at NORSAR.

Details of the program used to obtain beamed vertical, radial and transverse long-period data at LASA, ALPA and NORSAR are in the process of being reviewed. Vertical beams are probably valid while horizontal beams are questionable.

Scaling factors on plots are millimicrons at 1 Hz (not corrected for instrument response) with the exception of LASA and NORSAR short-period plots. LASA SP scaling factors are millimicrons per inch. Scaling factors are not reported for NORSAR short-period.

-A-
