SDCS EVENT REPORT NO. 57

Puerto Rico Region, 17 June 1975

This event report contains seismic data from the Special Data Collection System (SDCS), and other sources for the above event. Published epicenter information from seismic observations is:

	"P" Arrival	Origin Time	Lat.	Long.	m_b	M_s
NORSAR	05:12:00.8	05:01:06	18 N	066 W	4.6	N/A
LASA	05:09:03.6	05:01:22	18.7N	066.9W	5.2	N/A

Using SDCS stations, LASA and NORSAR, the epicenter location and magnitudes become

05:00:56.8 17.6N 066.4W 4.8 3.9

All SDCS stations were operational during this period.

Short-period signals associated with this event were recorded at all SDCS stations, LASA and NORSAR. Horizontal SP channels at all SDCS stations were rotated. Operating gains of all three SP channels at RK-ON were unknown.

Long-period signals were recorded at WH2YK, CPSO, RK-ON, ALPA, LASA and NORSAR. FN-WV and HN-ME did not record LP signals for this event and were not included in this report. Horizontal LP channels at WH2YK and RK-ON were rotated. At CPSO the calibration of the LP north instrument was invalid and rotation of the LP horizontal channels was therefore not accomplished. Validity of the ALPA, LASA and NORSAR long-period vertical beams is uncertain and the horizontal channels were not included because of program recovery problems.

Scaling factors on plots are millimicrons at 1 Hz (not corrected for instrument response) with the exception of LASA and NORSAR short-period plots. LASA SP scaling factors are millimicrons per inch. Scaling factors are not reported for NORSAR short-period.

Note: The orientation of the radial instruments at FN-WV is assumed to be 316° + 5° based on empirical data (event recordings). Rotation, where performed, is referenced to this azimuth and may be questionable.
