SDCS EVENT REPORT NO. 76

Eastern Kazakh SSR, 13 December 1975

This event report contains seismic data from the Special Data Collection System (SDCS), and other sources for the above event. Published epicenter information from seismic observations is:

	"P" Arrival	Origin Time	Lat.	Long.	m_b	M_s
NORSAR	05:04:18.6	04:56:44	49 N	080 E	4.9	N/A
Hagfors	05:04:08.8	04:57:17	51 N	075 E	5.4	N/A

Using SDCS stations and NORSAR, the epicenter location and magnitudes become

04:57:00.2	49.9N	078.0E	4.8	N/A
------------	-------	--------	-----	-----

All SDCS stations were operational during this period.

Short-period signals associated with this event were recorded at all SDCS stations and NORSAR. Horizontal SP channels at all SDCS stations were rotated. NORSAR "P" arrival was obtained from their bulletin; the TAL transmission was not recoverable.

The SDCS stations did not record long-period signals for this event and were not included in this report. ALPA and NORSAR long-period data were not recoverable. LASA long-period data were not included because of complicated recovery procedures.

Scaling factors on plots are millimicrons at 1 Hz (not corrected for instrument response).

Note: The orientation of the radial instruments at FN-WV is assumed to be $316^\circ \pm 5^\circ$ based on empirical data (event recordings). Rotation, where performed, is referenced to this azimuth and may be questionable.

Note: KS56000 seismometer installed 18:55:00Z 11 December 1975 at HN-ME.
