SDCS EVENT REPORT NO. 100

Eastern Kazakh SSR, 21 April 1976

This event report contains seismic data from the Special Data Collection System (SDCS), and other sources for the above event. Published epicenter information from seismic observations is:

	"P" Arrival	Origin Time	Lat.	Long.	m_b	M_s
NORSAR	05:05:19.0	04:57:48	49 N	080 E	4.9	N/A
Hagfors	05:05:09.2	04:58:19	51 N	075 E	5.5	N/A

Using SDCS stations, LASA and NORSAR, the epicenter location and magnitudes become

04:58:00.1 49.8N 077.9E 4.9 N/A

The programs used for LASA, NORSAR and ALPA data recovery are presently undergoing modifications. Information for LASA short-period is reported from their Teleseism Event Report; NORSAR short-period data are obtained from their bulletin. The long-period array beam recovery for these stations will be resumed upon completion of these modifications.

All SDCS stations were operational during this period.

Short-period signals associated with this event were recorded at WH2YK, RK-ON, FN-WV, CPSO, LASA and NORSAR. All SP channels at HN-ME had polarity reversals; to correct this, mathematical inversions of the data were performed. Horizontal SP channels at all SDCS stations were rotated.

The SDCS stations did not record long-period signals for this event and were not included in this report.

Scaling factors on plots are millimicrons at 1 Hz (not corrected for instrument response).
