INSTRUCTIONS

1. ORIGINATING ACTIVITY: Enter the name and address of the organization issuing the document.

2a. DOCUMENT SECURITY CLASSIFICATION: Enter the overall security classification of the document including special warning terms whenever applicable.

2b. GROUP: Enter security reclassification group number. The three groups are defined in Appendix 'M' of the DRB Security Regulations.

3. DOCUMENT TITLE: Enter the complete document title in all capital letters. Titles in all cases should be unclassified. If a sufficiently descriptive title cannot be selected without classification, show title classification with the usual one-capital-letter abbreviation in parentheses immediately following the title.

4. DESCRIPTIVE NOTES: Enter the category of document, e.g. technical report, technical note or technical letter. If appropriate, enter the type of document, e.g. interim, progress, summary, annual or final. Give the inclusive dates when a specific reporting period is covered.

5. AUTHOR(S): Enter the name(s) of author(s) as shown on or in the document. Enter last name, first name, middle initial. If military, show rank. The name of the principal author is an absolute minimum requirement.

6. DOCUMENT DATE: Enter the date (month, year) of Establishment approval for publication of the document.

7a. TOTAL NUMBER OF PAGES: The total page count should follow normal pagination procedures, i.e., enter the number of pages containing information.

7b. NUMBER OF REFERENCES: Enter the total number of references cited in the document.

8a. PROJECT OR GRANT NUMBER: If appropriate, enter the applicable research and development project or grant number under which the document was written.

8b. CONTRACT NUMBER: If appropriate, enter the applicable number under which the document was written.

9a. ORIGINATOR'S DOCUMENT NUMBER(S): Enter the official document number by which the document will be identified and controlled by the originating activity. This number must be unique to this document.

9b. OTHER DOCUMENT NUMBER(S): If the document has been assigned any other document numbers (either by the originator or by the sponsor), also enter this number(s).

10. DISTRIBUTION STATEMENT: Enter any limitations on further dissemination of the document, other than those imposed by security classification, using standard statements such as:

    (1) "Qualified requesters may obtain copies of this document from their defence documentation center."

    (2) "Announcement and dissemination of this document is not authorized without prior approval from originating activity."

11. SUPPLEMENTARY NOTES: Use for additional explanatory notes.

12. SPONSORING ACTIVITY: Enter the name of the departmental project office or laboratory sponsoring the research and development. Include address.

13. ABSTRACT: Enter an abstract giving a brief and factual summary of the document, even though it may also appear elsewhere in the body of the document itself. It is highly desirable that the abstract of classified documents be unclassified. Each paragraph of the abstract shall end with an indication of the security classification of the information in the paragraph (unless the document itself is unclassified) represented as (TS), (S), (C), (R), or (U).

    The length of the abstract should be limited to 20 single-spaced standard typewritten lines; 7½ inches long.

14. KEY WORDS: Key words are technically meaningful terms or short phrases that characterize a document and could be helpful in cataloging the document. Key words should be selected so that no security classification is required. Identifiers, such as equipment model designation, trade name, military project code name, geographic location, may be used as key words but will be followed by an indication of technical context.

INTRODUCTION

This thesaurus is a presentation of terms to be used for the indexing and retrieval of documents dealing with the subject area of Low Intensity Conflict (LIC).

A wide range of documents and reports relevant to LIC were selected, catalogued and indexed from open literature as part of a feasibility study on an Information Analysis Centre (IAC)[1]. The Thesaurus of Engineering and Scientific Terms (TEST)[2] was used initially for indexing terms but it became apparent that the subject matter required a broader range of terms in areas not covered comprehensively by TEST. Catalogers added terms as needed and gradually a "working vocabulary" of something less than one thousand descriptors emerged. This original word list was edited following the rules and conventions adopted for the construction of TEST. Undesirable terms were removed, new ones were added and all hierarchical relationships and cross-references were entered and checked. The present thesaurus contains 950 descriptors and 225 USE references in the Thesaurus of Terms. A more detailed discussion of the process of construction of the LIC Thesaurus (LICT) is available in a separate report[3].

LICT borrows heavily from TEST in format, rules and conventions followed and in many of the descriptors listed. The instructions and explanations about the use of LICT have been patterned after those in TEST.

This publication is the first edition of LICT. Acknowledgment is made of the work done by many people in assembling the first word list; it is regretted that their experience was not available during the compilation of the thesaurus.

Practical application of the thesaurus to the indexing of documents relating to Low Intensity Conflict will tend to correct inadequacies in the word list. Updated editions would include changes in the word list and in the terminology current in the subject area.

ORGANIZATION OF THE THESAURUS

The Low Intensity Conflict Thesaurus is organized into six divisions:

1. Thesaurus of Terms
2. Permuted Index
3. Subject Category Index
4. Hierarchical Index
5. Geographic Locations
   (a) Canadian Regions and Provinces
   (b) World Regions and Countries
6. Organizations and Groups (Ethnic, Racial, Religious).

THESAURUS OF TERMS

This is the principal division of the thesaurus. All descriptors (except those of divisions 5 and 6 above) and all USE references appear here interfiled alphabetically letter-by-letter. Each descriptor is shown with its hierarchical structuring, other cross references, and scope notes. For each USE there is a Used For entry, for each broader term a narrower term and for each related term a reciprocating related term, except in the case of certain very broad descriptors.

Some descriptors are accompanied by scope notes to specify the range of subject matter to which the term may be applied, to draw distinctions between related descriptors or to state which of several meanings of a term is intended.

Terms whose utility in indexing is doubtful because they are excessively broad or vague carry the scope note: *"Use of a more specific term is recommended; consult the terms listed below".*

PERMUTED INDEX

When a desired term is not found in the Thesaurus of Terms, or when the concept to be treated is more nebulous, the user should refer to the Permuted Index under the word or words believed to be most appropriate. This is an alphabetical listing of each significant word making up the terms in the Thesaurus. All descriptors and USE reference appear here.

This index will give the user the proper word order in a multi-word term. For example, the words in the descriptor *"Resistance movement (political)"* could be arranged in six different ways. Regardless of which word is used the descriptor will be found in the Permuted Index in the proper word order.

Another important factor is that a high degree of generic accumulation is reached. For example, all the terms containing the word *"bombs"* will be together. This gives the user leads to terms that might be pertinent to his need.

SUBJECT CATEGORY INDEX

During the construction of this Thesaurus all descriptors and USE references were assigned to one or more of the subject categories used in the LIC Digest series which was prepared as part of the Feasibility Study on an Information Analysis Centre on Low Intensity Conflict. No changes were made to the 9 major fields or 25 subfields.[1]

In the Thesaurus of Terms the Subject Category Field of the descriptors is identified by a four digit number. The first two digits indicate the major field and the last two indicate the group within the field. Descriptors were categorized on the basis of general subject relationships rather than by the rigorous class membership criteria followed in giving the broader-narrower hierarchical treatment. The Subject Category Index thus provides a display of all of the available descriptors in a general subject area.

HIERARCHICAL INDEX

This index displays complete families of descriptors related by class membership. It is based on the broader and narrower term assignments shown in the Thesaurus of Terms, therefore those descriptors which were not given class membership assignments will not appear. Descriptors representing heads of families are those which have no broader terms and at least two levels of narrower terms. This index will be most useful for hierarchical indexing or searching.

EXPLANATION

(Refer to similar letters on the opposite page)

A. **Descriptor.** This is the main entry position for the descriptor.

B. **UF (Used For).** The descriptor at the main entry is to be used for any term listed under this notation.

C. **Asterisk *.** The asterisk (*) in front of a term signifies that two or more descriptors are to be used in coordination for that term. The term entry should be consulted to determine these descriptors.

D. **USE.** This refers the user to the preferred descriptor or descriptors. USE and UF reciprocate throughout.

E. **Four Digit Numbers.** The four digit numbers following each descriptor at its main entry indicate the Subject Categories to which the term has been assigned in the Subject Category Index.

F. **Scope Note.** This is used only when some clarification of the descriptor's meaning is necessary.

G. **BT = Broader Term.** Descriptors under this notation represent a generically broader class which includes the main entry descriptor as a lesser term.

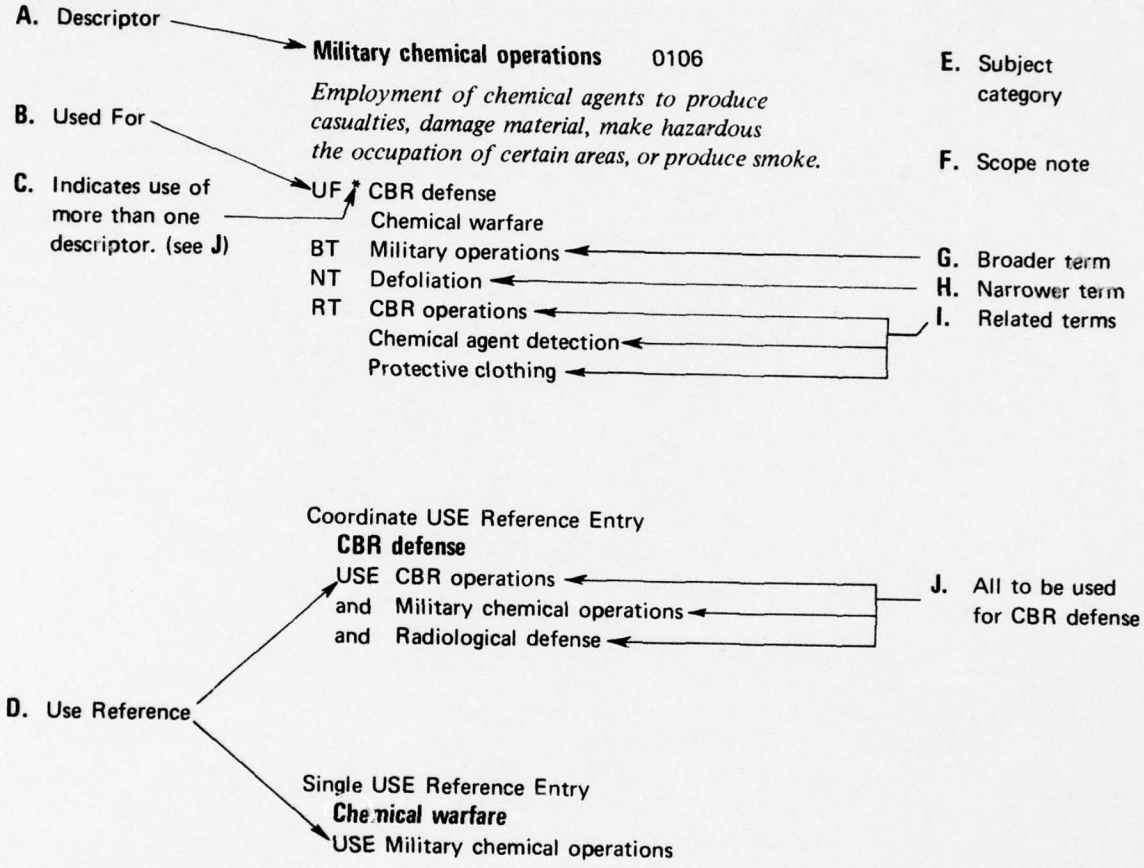

H. **NT = Narrower Term.** The reciprocal of G. above.

I. **RT = Related Terms.** Descriptors under this notation are not considered as belonging to the same generic class as the main entry descriptor but as having close association or relationship to it.

J. **Use of Descriptors.** All descriptors shown under USE should be used in coordination to represent the entry; both for indexing and searching.

Permuted Index

PRECEDING PAGE BLANK-NOT FILMED

The Permuted Index displays all terms in the Thesaurus permuted according to each significant word in the single and multi-word terms, arranged in alphabetical order on the permuted words. With the exception of articles, conjunctions, prepositions and single occurring numbers, all words are considered significant including parenthetical qualifying expressions which are parts of descriptors or USE references. All terms containing the same word are grouped together, with the single word term first, all other terms following in alphabetic order. Index words that are themselves descriptors appear in bold face, otherwise in italics. Terms that are USE references are preceded by a centred dot (•).

Subject Category Index

The Subject Category Index displays the descriptors grouped by subject areas based on the LIC Digest Subject Category List used as part of the feasibility study on an information analysis centre on low intensity conflict. The index is a two-level arrangement consisting of nine major subject fields, most of which are subdivided into groups. The categorizations are intended to bring together the descriptors available in various subject areas and do not represent a strict classification of terms. Terms that are USE references are preceded by a dot (•).
