20. ABSTRACT (Continue on reverse side if necessary and identify by block number)

This directory contains descriptions of 54 compendiums of computer programs relating to engineering problems. It is based on a survey of organizations that create, use, or distribute computer programs. The descriptions concentrate on three aspects of each compendium: bibliographic information about the compendium itself, format data, and the subject areas treated by the computer programs in the compendium. Cross referenced source and subject indices are provided.

DD FORM 1 JAN 73 1473 EDITION OF 1 NOV 65 IS OBSOLETE

SECURITY CLASSIFICATION OF THIS PAGE (When Data Entered)

FOREWORD

This directory to collections of computer program descriptions was conceived as a means for locating computer programs in engineering, particularly ocean engineering, in order to avoid searching for such programs individually. The work of Pilkey and others in compiling abstracts of structural engineering computer programs was known. It was hoped that similar compendiums of computer programs in other engineering disciplines could be found.

By restricting the search to compendiums of computer programs, it was expected that the programs described would be above average in validation and documentation.

A broad definition of the word "compendium" was used while collecting materials for this report. A compendium was required to be in printed form, so computer-tapes, microfilm, microfiche, and the like were reduced to hard-copy. A compendium was required to describe more than one computer program. Technical journals and other collections of technical papers were not considered compendiums, even though many of the papers contained the results of computer calculations.

The greatest variabilities among the compendiums are the amount of descriptive material they contain and the degree of indexing they provide. Descriptive material ranges from simple lists of program names to complete abstracts with analyses of the theoretical basis of the programs. Some compendiums have no indices; others have several.

Another variable among compendiums is durability. This factor was considered because the intent of the survey was to collect compendiums for a library. Some of the compendiums are bound books and need no further preparation. Others are paperbound reports, also suitable for library use. But

BY
DISTRIBUTION/AVAILABILITY CODES
Dist. AVAIL. and/or SPECIAL
A

some of the compendiums are loose or stapled sheets, or fanfold computer printouts.

Fragile compendiums were bound. Oversized pages were reduced before binding. One compendium containing many manuscript pages was typed. Compendiums having only a few pages were bound in one of two loose-leaf binders for protection.

One binder was entitled A Collection of Computer Program Literature. The compendiums put in it describe only a few programs. They are not treated individually in this directory. The entire binder is summarized on page 3-6.

The other binder has no title. The compendiums put in it describe many programs. Each of these compendiums is summarized separately in this directory. The summary includes the following note: "Included in a 3-ring binder for protection" to help the user locate these small compendiums.

The search for compendiums proceeded through four levels of personal contact. First, a computer service was engaged to search seven, large engineering data bases. It was hoped that these data bases would contain references to engineering computer program compendiums. The results were disappointing, with only the structural mechanics compendiums appearing in the printout. Next, inquiries were mailed to organizations which seemed likely to have large numbers of engineering computer programs -- industrial corporations, computer services, universities, professional societies, computer program vendors and repositories, research laboratories, and government agencies. The third level of contact was by telephone, and the final by personal visit.

The disappointing return from the computerized search for compendiums was not really an anomaly. Computer programming, as a general body of knowledge, is still in its infancy. Most computer programs are too poorly validated and documented for inclusion in a compendium. Users unfamiliar with the details of a program's development may be unable to obtain results, or may be

misled by invalid results. Most programmers, it seems, would still rather write their own program "from scratch" than obtain or adapt an existing one. Many companies are unwilling to discuss their computer program libraries, much less reveal the presence or absence of program capabilities in a compendium.

Few universities maintain a central catalog listing of the programs written by their professors. Some are prohibited by law from running their programs for clients outside the university, and are reluctant to release their catalogs of programs to ineligible viewers.

Then there are the economic aspects. In affluent times, the expense of documenting a program for inclusion in a compendium seems like a worthwhile investment in technical publicity, and the costs of responding to user inquiries are more easily absorbed. But in leaner times, when smaller staffs are under greater pressure, there is no money for documentation, and user inquiries are pestilential.

The compendiums were prepared for different purposes by their various compilers. It would be inappropriate to criticize a compendium created for one purpose because it failed to satisfy another. At the same time, the validity of programs described in the compendiums listed herein cannot be endorsed. Inclusion of a compendium in this manual does not imply that the computer programs described in the compendium are extant or available for use. Such affairs must be left to negotiation with the owners of the individual programs.

This directory to collections of computer program descriptions was prepared by Ms. Judith Daly and Mr. David Dillon of EG&G Washington Analytical Services Center, Inc., Rockville, Maryland, for the Ocean Engineering and Construction Project Office of the Chesapeake Division of the Naval Facilities Engineering Command under contract N00014-76-C-0534 with the Office of Naval Research.

PRECEDING PAGE BLANK-NOT FILMED

INTRODUCTION

This document is intended to help find computer programs for solving engineering problems. Each compendium described in this manual is presented on two facing pages so that the user has all the information about a compendium before him. The material is presented in four "boxes" on the two pages.

The Bibliographic Information box provides data to identify and obtain the compendium. The book is identified by its title, author, publisher, and date. The addresses of author and publisher are given, and the direct source for obtaining the compendium is indicated by an asterisk.

The Descriptive Information box describes the compendium itself. The TYPE OF COMPENDIUM describes the primary factor common to the programs listed in the compendium. The method of describing the programs is indicated, i.e., abstracts, advertising, brochures, title, listing, etc. SCOPE describes limitations to the programs, secondary factors used in selecting programs for the compendium. The ARRANGEMENT describes the format of the compendium itself. The number and kind of INDEXING DEVICES available to locate programs in the compendium are noted. Whether or not the compendium contains complete ABSTRACTS of the programs is shown. Since many engineering computer programs are based on advanced mathematical principles, whether or not the compendium includes a description of the THEORY behind each program is indicated. Some compendiums are backed by an ASSOCIATED SEARCH ASSISTANCE from which the user may receive additional help in locating a suitable program. Some compendiums are periodicals. The UPDATE INTERVAL is given in these cases. Periodical compendiums may require a subscription, and the complete set of programs may not be printed in each issue. The user is assured that some effort is being made to keep these compendiums current. The approximate NUMBER OF PROGRAMS listed in the compendium is shown. It indicates to the user his probability of locating a suitable program. The ENTRY FORMAT describes how each program is presented in the compendium. Finally, the PRICE of the compendium is given.

PRECEDING PAGE BLANK-NOT FILMED

The Subject Index box lists subjects addressed by programs in the compendium and the number of programs addressing each subject. Not every subject in a compendium is listed in the box -- only those broadly related to engineering. Furthermore, a program may be listed under more than one subject. Therefore, the total number of programs listed in the Subject Index box may not agree with the approximate number entered in the Descriptive Information box. Very large compendiums may be cataloged on two or more levels -- subject and subtopic. In these cases, the Subject Index box lists the major subjects and number of subtopics rather than number of programs. The wording of entries in the Subject Index box corresponds as nearly as possible to the wording that appears in the compendium.

The fourth box, Comments, presents facts about the compendium. It serves as a catchall for pertinent compendium data that do not fit into the other, fixed-format boxes. The variability among compendiums is great, especially because "compendium" was defined in general terms.

The facing-page summaries are grouped in Sections 1 through 5 according to the kind of organization that sponsored the preparation of the compendium. Appendix A is a condensed summary of all the compendiums, presenting on facing pages basic facts about each. Appendix B is a list of the organizations from whom compendiums were requested.

A person may use the subject and source indices to find a compendium that describes computer programs relating to an engineering problem. If the compendium is not at hand, a copy may be obtained from the source indicated in the Bibliographic Information box. When the compendium is obtained, a suitable program may be selected, using whatever indexing aids the compendium provides. Finally, the user may contact the owner of the program to obtain a copy or to arrange to have the program run.

Unclassified programs owned by the United States Government are often available at nominal cost. Universities may require that a professor be retained as a consultant. Corporations may refuse program access altogether. Industrial associations may require membership as a condition to access. Computer services, of course, will be happy to run their programs, but are unlikely to sell a program listing. Program vendors are eager to sell their wares.

DESCRIPTIVE INFORMATION

TYPE OF COMPENDIUM: Abstracts of programs for the nuclear industry.

SCOPE: Programs are selected for their usefulness to ERDA contractors, University Nuclear Engineering Departments and the nuclear industry. Certain designated programs have restricted distribution.

ARRANGEMENT: Program abstracts are arranged by accession numbers assigned at the Code Center.

INDEXING DEVICES: KWIC (Keyword in Context)

ABSTRACTS: Yes **THEORY:** No

ASSOCIATED SEARCH ASSISTANCE: No

UPDATE INTERVAL: Irregular supplements are published.

NUMBER OF PROGRAMS: 555

ENTRY FORMAT: Name of Program, Hardware, Problem Solved, Method, Restrictions, Running Time, Unusual Features, Related Programs, Status, References, Language, Name and Organization of Author, Materials Available and Category.

PRICE: Price varies according to the size of the supplement.

SUBJECT INDEX

MAJOR SUBJECT	NO. OF PROGRAMS
1. Cross-section and Resonance - Integral Calculations	48
2. Spectrum Calculations, Generation of Group Constants, Lattice and Cell Problems	70
3. Static Design Studies	61
4. Depletion, Fuel Management, Cost Analysis and Reactor Economics	51
5. Space-independent Kinetics	16
6. Space-time Kinetics, Coupled Neutronics-Hydrodynamics-Thermodynamics & Excursion Simulations	24
7. Radiological Safety, Hazard & Accident Analysis	37
8. Heat Transfer & Fluid Flow	42
9. Deformation & Stress Distribution Computations, Structural Analysis & Engineering Design Studies	52
10. Gamma Heating and Shield Design	15
11. Reactor Systems Analysis	2
12. Data Preparation	13
13. Data Management	25
14. Subsidiary Calculations	10
15. Experimental Data Processing	20
16. General Mathematical & Computing System Routines	47
17. Materials	6
18. Environmental and Earth Science	3
19. Chemistry	1
20. Particle Accelerators & High Voltage Machines	1
21. Physics	4
22. Controlled Thermonuclear Research	2
23. Data	5

COMMENTS

This is a large compendium with detailed abstracts. Although the compendium is strongly oriented to nuclear reactor design, many of the programs relate to more general engineering problems, especially subject categories 3, 8, 9, 17 and 18. Useful programs may be found in other categories as well.

The composite index is in alpha/numeric order of (1) all the key words in the KWIC title, (2) installation code, (3) machine code, (4) program language code, (5) package code, and (6) subject category code. Thus, one index does the work of six.

A major drawback is that each supplement provides only replacement pages for the previous version. To acquire a complete current volume, the original text must be obtained and sequentially updated with each of the nine massive supplements in turn. The NTIS reproduction of the supplements occasionally prints pages that insert at different places on the front and back of one sheet of paper. In addition, some of the supplements are permanently bound at NTIS, so that collating them into a single document is impossible. However, Supplement 9 contains a complete list of all current program names in the Table of Contents; one may look back through the previous Supplements until the desired page and abstract are encountered.

a. Support	37
b. Input-Output	6

COMMENTS

This compendium is a terse listing of the programs available on the CYBER 74/28 Computer System of the Bureau of Reclamation. Descriptions of program purpose and content are limited to a one-sentance title. However, more than 400 of the 1000-plus programs listed fall in the categories of civil engineering, structures, civil hydraulics, and mathematics.

Use of the index is further complicated by the fact that the major subject headings are not printed; only the secondary headings are interspersed with the headings listed above. No page number is given in the compendium index for these headings. In a few cases there are unusual secondary groupings. "Special Assignments" is divided into a "Miscellaneous" group as well as an "Unclassified" group, for example. Finally, the second program listed on page 17 seems improperly indexed.

This compendium contains a large number of programs. But the confusing index makes finding the "right" program difficult, and the brief entry format makes recognizing the "right" one an added difficulty.

b.	Other Physical Science	13
c.	Engineering	45
d	Business Data Processing	21
e.	Manufacturing Process & Control	4
f.	Mathematics & Applications	21
g.	Biological Sciences	1
h.	Space Utilization	1

COMMENTS

This compendium is the cumulative catalog of all active general purpose programs available in the computer library of the NASA Goddard Space Flight Center (GSFC). The programs included in the catalog were either prepared or modified under GSFC sponsorship.

Other NASA computer programs are indexed under contract by the Computer Software Management and Information Center (COSMIC).

Many of the programs in this catalog solve specific NASA problems; others have broader applications.

		27.	Plots Lake Sand Bar Profiles

COMMENTS

This is a very brief compendium of programs useful in coastal engineering. The programs were all in active use in the spring of 1976. Though the compendium is small, the specialized nature of the programs makes it a valuable resource for certain problems.

An automatic data processing coordinator has been established at CERC to process requests for information.

NOTE: Included in 3-ring binder for protection.

34. General

COMMENTS

This compendium lists documented computer programs developed under National Aeronautics and Space Administration or Department of Defense sponsorship, as well as privately developed programs which have been contributed to the COSMIC repository.

The COSMIC staff can prepare abstract listings for a specific subject. Assistance in installing programs can be obtained. Programs accepted by COSMIC meet standards for documentation and operating consistency.

1968-78

DATE: April 1976

* OBTAIN FROM THIS SOURCE.

DESCRIPTIVE INFORMATION

TYPE OF COMPENDIUM: Abstracts of hydrologic programs from a computer library.

SCOPE: Programs developed by the Hydrologic Engineering Center, and available for public release, are included.

ARRANGEMENT: None

INDEXING DEVICES: Table of Contents

ABSTRACTS: Yes **THEORY:** No

ASSOCIATED SEARCH ASSISTANCE: No

UPDATE INTERVAL: None planned

NUMBER OF PROGRAMS: 29

ENTRY FORMAT: Title, Program Number, Preparing Agency, Author, Date of Completion, Purpose, Program Specifications, Methods, Equipment Details, Input-Output, and Additional Remarks.

PRICE: The compendium is free of charge; programs can be obtained at $60.00 each.

SUBJECT INDEX

PROGRAM TOPIC		PROGRAM TOPIC	
1.	Flood Hydrograph Package	16.	Reservoir Capacity
2.	Basin Rainfall and Snowmelt	17.	Monthly Streamflow Simulation
3.	Unit Graph and Hydrograph	18.	Daily Streamflow Simulation
4.	Unit Graph and Loss Rate	19.	Regional Station Event Frequency
5.	Hydrograph Combining and Routing	20.	Average Annual Damage
6.	Streamflow Routing	21.	Urban Storm Water Runoff
7.	Balanced Hydrograph	22.	River - Reservoir Water Quality
8.	Water Surface Profiles	23.	River - Reservoir System Data Editor
9.	Unsteady Flow Profiles	24.	Reservoir Temperature Stratification
10.	Spillway Rating and Flood Routing	25.	River and Reservoir Scour and Deposition
11.	Spillway Rating with Tainter Gates	26.	Suspended Sediment Yield
12.	Spillway Gate Regulation	27.	Reservoir Delta Sedimentation
13.	Flood Control and Conservation Simulation	28.	Deposit of Suspended Sediment
14.	Reservoir System Analysis	29.	Finite Element Solution of Steady-State Potential Flow
15.	Reservoir Yield		

COMMENTS

The programs described in this compendium are primarily directed towards inland hydrology, but some may be applicable to problems in coastal facility design.

These programs are available to private consulting engineering firms as well as U.S. Government agencies. However, the former are required to file a Memorandum of Understanding with HEC delineating the terms of release of the program.

SUBJECT INDEX

MAJOR SUBJECT	NO. OF PROGRAMS	MAJOR SUBJECT	NO. OF PROGRAMS
1. Physical Oceanography	99	8. Pollution	5
2. Chemistry	5	9. Currents and Transfer Processes	23
3. Coastal & Estuarine Processes	20	10. Tides	4
4. Engineering		11. Waves	13
a. Suspended Loads at Sea	4	12. Air-Sea Interaction & Heat Budget	15
b. Soil Test Data Analysis	1	13. Ice	4
c. Cable Properties	2	14. Sound, General	14
d. Submersibles	3	15. Sound, Velocity	7
e. Cable Systems, Static	9	16. Sound, Ray Path	10
f. Cable Systems, Dynamic	10	17. Navigation and Charting	50
g. Corer Trajectory, Free Fall	2	18. Graphic Display	37
5. Geology & Geophysics	42	19. Time & Spectral Series Analysis	19
6. Biology	21	20. Curve Fitting	9
7. Fisheries	46	21. Applied Mathematics	9
		22. Data Reduction, Editing, Conversion, Inventory, Retrieval, and Special Input/Output	

Several of the programs are, in fact, program systems which the user can "tailor" to operate in a variety of related computations by accessing subprogram units.

Subject	Program System	No. of Subprogram Units
Coastal Processes	AUGUR-Simulation of Aquatic Ecosystems	--
Geophysics	Soil and Sediment Sample Analysis	10
Pollution	ECOSTAT -- Ecological Statistics	--
Waves	Water Wave Teaching Aids	18
Sound, Ray Path	GRASS - Underwater Acoustics Prediction	7
Navigation & Charting	NOS Scientific Subroutine System	16
Time Series	ARAND	.00
Data Management	GAS - Generalized Application System	24

COMMENTS

The nearly 500 programs cataloged represent a good sampling of the computer programs currently in use by marine scientists. The marine engineer will probably find most of the programs not useful. However, the section on engineering contains several important programs for the ocean engineer, and some of the other subject areas may provide useful help with related problems.

All the programs have unlimited distribution. Programs were accepted and listed from 34 federal and state organizations, 12 foreign and 2 private organizations, and 26 universities.

13.	Backwater	7	28.	Turbine Generator Performance	1
14.	Flood Control	24	29.	Elevators and Escalators	1
15.	Precipitation	21			

COMMENTS

This compendium lists computer programs supplied by the following government agencies:

	GOVERNMENT AGENCY	NO. OF PROGRAMS		GOVERNMENT AGENCY	NO. OF PROGRAMS
1.	Veteran's Administration Office of Construction	17	5.	Department of the Air Force Director of Civil Engineering	60
2.	Department of the Navy Naval Facilities Engineering Command	16	6.	Department of the Army Office of the Chief of Engineers	568
3.	Post Office Department Construction Research Branch	19	7.	National Bureau of Standards Building Research Division	17
4.	General Services Administration Public Building Services	7			

The programs listed cover a wide variety of engineering and management problems related to the design and construction of buildings and other facilities. However, most of the programs are not supported by documentation. This compendium does not indicate the "size" of the programs; many seem to be relatively short, specific programs that facilitate a particular design problem. A few programs are patently trivial. Some sophisticated programs may be obscured by the brevity of their description; others are written in unusual languages or used on older machines.

SUBJECT INDEX

ASKA

Static, dynamic or nonlinear analysis of flange, membrane, plate, shell, ring, 3-dimensional, or beam structure.

NASTRAN

A very large, general purpose structural analysis program.

DAISY

General purpose static structural analysis program including thermal gradients.

STARDYNE

A package of structural analysis programs using the finite element stiffness method to solve static, dynamic, and stability problems.

STRUDL

Static or dynamic analysis of structures plus steel and reinforced concrete design code.

MARC

General purpose, nonlinear, finite element analysis of structures with large displacement including plastic flow, creep, and thermal effects.

COMMENTS

This compendium is a collection of papers presented at a symposium sponsored by the Office of Naval Research. As such, the compendium is more nearly described as an advanced textbook on the relationships between computer technology and structural mechanics. Part II of the text contains reviews of the six structural computer programs listed above.

COMMENTS

This compendium is the result of a research project initiated by the Ship Production Committee of the Society of Naval Architects and Marine Engineers and financed largely by funds from the U.S. Maritime Administration. The purpose of the project was to reduce the cost of building ships by using computer programs more effectively. This compendium is a compilation of the computer programs currently available to the shipbuilding industry.

NUMBER OF PROGRAMS: 221

ENTRY FORMAT: Program Identification and Status Code (which defines where the program originated).

PRICE: No charge to government agencies.

SUBJECT INDEX

MAJOR SUBJECT	NO. OF PROGRAMS	MAJOR SUBJECT	NO. OF PROGRAMS
1. Regression and Curve Fitting	42	7. Simulation and Number Generators	19
2. Statistical Analysis	38	8. Time Series Analysis	12
3. Matrices and Simultaneous Equations	17	9. Numerical Sorting	5
4. Numerical Analysis	28	10. Metallurgical Applications	7
5. Special Functions	13	11. Miscellaneous and Utility	14
6. Operations Research	26		

COMMENTS

This compendium contains an assortment of the general mathematical tools often used by engineers and other scientists, but no programs uniquely for engineering, except for the metallurgical applications. The abstracts describe both independent programs and dependent codes such as subroutines and functions. Most of the programs address a specific problem or specifically defined class of problems so that the brief abstracts adequately describe the entries for most users. However, the highly condensed coding used to summarize the technical description (language, machine, etc.) of the entries is inconvenient for the casual user who has not memorized the code list. There is a series of comparisons between some common mathematical algorithms in the back of the compendium that will interest programmers.

38. Transfer Functions	4
39. Vehicle Simulation	8

COMMENTS

This book is more an encyclopedia of shock and vibration computer programs than a compendium, because of the technical discussions included in each chapter. It contains critical reviews and summaries of available shock and vibration computer programs.

The book is divided into two sections. In the first section, computer programs suitable for particular classes of problems are considered. Both special and general purpose programs are included. Availability of each program is indicated.

In the second section of the book, the capabilities of readily available general purpose programs are treated. The methods used for solving dynamics problems are outlined and the techniques employed for incorporating various material properties are scrutinized. Programs are evaluated for their application to particular problems.

COMMENTS

The programs described in this compendium address the civil engineering of inland waterways, including channels, dams, navigation locks, and associated rainfall and drainage problems. WES/ECPL is the central repository and distributor of engineering computer programs for the entire Corps of Engineers.

1666-78

SECTION 2
UNIVERSITIES AND PUBLIC INSTITUTIONS

BIBLIOGRAPHIC INFORMATION

TITLE: Compendium of Structural Mechanics Computer Programs

PERSONAL AUTHOR: Perrone, Nicholas

CORPORATE AUTHOR: The Catholic University of America
Civil and Mechanical Engineering Department
Washington, D.C. 20017

PUBLISHER: * National Technical Information Service
U.S. Department of Commerce
5285 Port Royal Road
Springfield, Virginia 22151

DATE: April 1971

* OBTAIN FROM THIS SOURCE.

DESCRIPTIVE INFORMATION

TYPE OF COMPENDIUM: Abstracts of structural mechanics programs.

SCOPE: Programs compiled from 72 public and private sources.

ARRANGEMENT: Programs are arranged according to the author's Descriptor Categories in Structural Mechanics, using a three-letter code to designate the subject area.

INDEXING DEVICES: Author Index
Organizational Index

ABSTRACTS: Yes **THEORY:** No

ASSOCIATED SEARCH ASSISTANCE: No

UPDATE INTERVAL: None planned

NUMBER OF PROGRAMS: 563

ENTRY FORMAT: Program Title, Brief Synopsis, Hardware, Language, Size of Program, Confidence Index, Author, Organization, and Address.

PRICE: $6.00

SUBJECT INDEX

The programs in this compendium are described by a series of 3-letter codes. The first letter identifies the type of structure to be analyzed. The second letter identifies the kind of load applied to the structure. The third letter indicates the analytical model used in the program. The code lists are as follows:

Letter	Structure	Load	Analytical Model
A	Beam/Rod/Cable	Static - Concentrated	Elastic
B	Shaft	Static - Uniform/Pressure	Perfectly Plastic
C	Column	Static - Other	Strain Hardening
D	Grid	Impulsive	Limit Analysis
E	Frame/Truss	Periodic	Viscoelastic - Strain Rate
F	Ring/Arch	Pressure Pulse	Viscoelastic
G	Membrane	Centrifugal/Inertial	Inhomogeneous
H	Disk/Plate - Circular	Natural Vibrations/Eigenvalues	Orthotropic
I	Disk/Plate - Rectangular	Thermal	Geometric Nonlinear
J	Disk/Plate - Other	Acoustic	Material Nonlinear
K	Tube/Pipe	Electromagnetic	Instability/Buckling
L	Shell - Cylindrical	Radiation	Stress Concentration
M	Shell - Spherical	Random	Wave Propagation
N	Shell - Axi-symmetric		Fracture
O	Shell - Other		Fatigue
P	Continuum		Acoustic
Q			Optimization
R			Biomechanics
Y	Combination	Multiple	Combination
Z	Other	Other	Other

A program may satisfy more than one code triplet.

COMMENTS

This compendium is one of several structural mechanics computer program compendiums, which parallels the proliferation of structural programs as the understanding of powerful new computational algorithms becomes more widespread. The three-level program classification network is a useful concept. However, its implementation in an index separate from the table of abstracts would have eliminated multiple entries. Most of the programs in this volume solve a specific problem. Special-purpose programs are more efficient than the general programs.

COMMENTS

The programs in this compendium address specific technical problems in ocean science. The current user at WHOI should be contacted for additional details.

NOTE: Included in 3-ring binder for protection.

BIBLIOGRAPHIC INFORMATION

TITLE: Fortran Graphics Program for Physical Oceanographic and Time Series Data (Marine Technical Report 46)

PERSONAL AUTHOR: Kramer, William P.
Weisberg, Robert H.

* CORPORATE AUTHOR: Graduate School of Oceanography
NOAA Sea Grant
University of Rhode Island

* PUBLISHER: URI Marine Advisory Service
Narragansett Bay Campus
Narragansett, Rhode Island 02882

DATE: N/A

* OBTAIN FROM THIS SOURCE.

DESCRIPTIVE INFORMATION

TYPE OF COMPENDIUM: Abstracts of graphics programs for time series oceanographic data.

SCOPE: Programs formulated at URI to: 1) plot variables typically sampled by physical oceanographers and 2) prepare plots of publishable quality.

ARRANGEMENT: None

INDEXING DEVICES: Table of Contents

ABSTRACTS: Yes THEORY: No

ASSOCIATED SEARCH ASSISTANCE: No

UPDATE INTERVAL: N/A

NUMBER OF PROGRAMS: 7

ENTRY FORMAT: Program Title, Purpose, Control Cards, Data Cards, Time Card, Printed Output Sample, Illustrations.

PRICE: No charge

SUBJECT INDEX

1. MULTYPLTS -- displays any number of time series.
2. OVERPLOT - displays two time series on the same set of axes.
3. STICK -- reads Cartesian coordinate components and displays them as a time series of resultant vectors.
4. LINLIN - plot series of X, Y points on linear axes.
5. LINLOG - plots a variable on a linear axis versus frequency and period on a logarithmic axis.
6. LOGLIN - plots two variables on a logarithmic axis versus frequency and period on a linear axis.
7. SPECIALL - plots a single variable on a linear Cartesian coordinate where the X-axis is frequency and period.

COMMENTS

This compendium provides detailed documentation of a package of time series plotting programs available at the computing center of the University of Rhode Island (URI). The programs were originally written to plot variables typically sampled by physical oceanographers and prepare plots of publishable quality, although they may be used in wider applications.

Complete listings of the programs form an appendix to the compendium for users who do not have access to the URI computer.

1. Computer Utility	30	9. Matrix and Vector Operation	28
2. Data Handling	13	10. Number Manipulations	20
3. Differential Equations	5	11. Optimization	19
4. Econometrics	4	12. Other Curve Fitting Techniques	5
5. Eigenvalues and Eigenvectors	14	13. Parameter Approximation & Smoothing	7
6. Fourier Transforms	3	14. Plotting	3
7. Integration	4	15. Probability & Statistics	6
8. Least Squares	5	16. Roots of Equations	40

COMMENTS

The programs described in this listing represent the available library at the Stanford Center for Information Processing as of January 19, 1976. They are all mathematical routines. The sequence of alphabetical order for the program names suggests that the programs have been sorted categorically. The category names are not given.

Probability and Statistics	84		
Curve Fitting	68	5. Plotting & Graphics	14
Linear Algebra	43		
Roots of Functions	36	6. Engineering	12
Optimization	27		

COMMENTS

Program descriptions range from a phrase to a paragraph. The combination of catalog and index produces redundant entries, but allows the user access to a description within the single alphabetic listing. The catalog aslo includes entries for publications of the Academic Computer Center that are not computer programs.

BIBLIOGRAPHIC INFORMATION

TITLE: Structural Mechanics Computer Programs: Surveys, Assessments, and Availability

PERSONAL AUTHOR: Pilkey, W.
Saczalki, K.
Schaeffer, H.

CORPORATE AUTHOR: Symposium held at the University of Maryland, June 1974

* PUBLISHER: University of Virginia Press
Charlottesville, Virginia 22904

DATE: 1974

* OBTAIN FROM THIS SOURCE.

DESCRIPTIVE INFORMATION

TYPE OF COMPENDIUM: Collection of papers about structural mechanics programs.

SCOPE: Programs included from all segments of the structural engineering domain.

ARRANGEMENT: The volume is arranged into chapters, according to specific classes of problems. Particular programs are cited in the text, and bibliographic information is provided in various formats.

INDEXING DEVICES: Subject Index of Structural Mechanics Computer Programs;
Alphabetical Index

ABSTRACTS: Yes THEORY: Yes

ASSOCIATED SEARCH ASSISTANCE: No

UPDATE INTERVAL: None planned

NUMBER OF PROGRAMS: 625

ENTRY FORMAT: The program descriptions included in the chapters vary, but an attempt is made to include: Capability, Language, Input, Output, Hardware, Usage, Developer, Availability, and Comments.

PRICE: $20.00

31. Viscoelastic Structures	12

COMMENTS

The program descriptions in this compendium were prepared for a symposium held at the University of Maryland in June, 1974. Part I of the compendium gives comparative reviews of the programs considered. It is divided into nineteen chapters following the subject headings listed above. The nine chapters in Part II deal with the development and dissemination of large user-oriented computer programs. Part III has ten chapters dealing with preprocessing programs for automatically "setting up" data for the structural programs and for postprocessing and display of the computer results. The final four chapters form Part IV, a discussion of computer trends for structural design.

5. Interpolation & Approximation	33	11. Engineering Applications	115
6. Matrix Operations	65	12. Business Applications	40

COMMENTS

This compendium is a listing of the programs and software stored on the library tapes of the computer at the University of Colorado as of March, 1976. It includes commercially available and proprietary programs, and contributions of professors and students. There is no way of evaluating the quality, correctness, and life span of any program.

1005-76

BIBLIOGRAPHIC INFORMATION

TITLE: WHIMPER, A Library of Time Series Programs, University of Washington, for Use on CDC 6400 Computer

PERSONAL AUTHOR: Irish, James D. Levine, Murray
Bendiner, Donna J. Zeh, Judy

* CORPORATE AUTHOR: Applied Physics Laboratory
University of Washington
Seattle, Washington 98195

PUBLISHER: N/A

DATE: February 12, 1975

* OBTAIN FROM THIS SOURCE.

DESCRIPTIVE INFORMATION

TYPE OF COMPENDIUM: A user's manual for geophysical time series programs.

SCOPE: Programs in Fortran IV, for use on CDC 6400, GEOTAPE System, available at University of Washington.

ARRANGEMENT: Random arrangement of actual program descriptions within the narrative, which can be located through the use of the Title Index.

INDEXING DEVICES: Title Index

ABSTRACTS: Yes THEORY: No

ASSOCIATED SEARCH ASSISTANCE: No

UPDATE INTERVAL: None planned

NUMBER OF PROGRAMS: 29

ENTRY FORMAT: Narrative of user instructions and program output.

PRICE: N/A

SUBJECT INDEX

	PROGRAM TOPIC
1.	ARCHIVE - Writes Geotape
2.	CCCOH - Cal-Comp plot of coherence
3.	COPYGEO - Copies Geotape
4.	GEOPRNT - Prints Geotape
5.	GEOTAPE - Descriptive introduction
6.	GNCOS - Generates sum of cosines
7.	GNFIL - Generates filter
8.	HARM - Fourier transform
9.	IFTPER - Computes FFT periodogram
10.	ISPSMD - Smoothes periodogram
11.	LGAX - Log-Log plot of spectra
12.	NCONVL - Calculates convolution product
13.	NCROSC - Calculates cross correlation
14.	NTRMAT - Cross spectral matrix transformation
15.	PCROSP - Cross spectra by FFT
16.	PRPLOT - Printer plot of coherence
17.	PRCOH - Printer plot of series
18.	RETREVE - Reads Geotape
19.	SPECTRA - Descriptive introduction
20.	TAPER - Applies cosine taper to series
21.	TIDADM - Calculates tidal admittance
22.	TIDES - Descriptive information
23.	TIDFIL - Generates anti-tide filter
24.	TIDHAR - Generates tide from tidal constants
25.	TIDPOT - Generates tide potential
26.	TIDRSP - Prediction from response weights
27.	TIDSPC - Transform at tidal frequencies
28.	TIDWTS - Calculates response weights
29.	UNSORT - Operates on fourier

COMMENTS

This compendium contains a library of time series programs available on the University of Washington, CDC computer for manipulating, storing, and retrieving geophysical data. It is primarily a manual for using Whimper on the U. W. computer system. Interspersed with this material are details about each program.

1666-78

SECTION 3
CORPORATIONS AND INDUSTRIAL ASSOCIATIONS

BIBLIOGRAPHIC INFORMATION

TITLE: APEC Program Abstracts

PERSONAL AUTHOR: N/A

*CORPONATE AUTHOR: Automated Procedures for Engineering Consultants, Inc.
Grant-Deneau Tower
Suite M-15
Dayton, Ohio 45402

PUBLISHER: N/A

DATE: N/A

* OBTAIN FROM THIS SOURCE.

DESCRIPTIVE INFORMATION

TYPE OF COMPENDIUM: Detailed abstracts of programs for designing building utility systems.

SCOPE: Programs available only to APEC members.

ARRANGEMENT: Alphabetical by title of program.

INDEXING DEVICES: None

ABSTRACTS: Yes THEORY: No

ASSOCIATED SEARCH ASSISTANCE: No

UPDATE INTERVAL: Irregular

NUMBER OF PROGRAMS: 6

ENTRY FORMAT: Introduction, Objectives, Limitations, Organization, Operation, Errors, Options, Input and Sample.

PRICE: No charge

SUBJECT INDEX

PROGRAM TOPIC

1. HCC III - Heating and Cooling Load Calculation
2. SUPERDUCT - Aid in the Design of Air Duct Systems
3. MOIP - Pipe Sizing and Cost Analysis Program
4. FEEDER II - Design and Analysis of Common Electrical Feeder Circuits
5. LIGHTING II - Design and Analysis of Interior Lighting
6. SPECS - Editing and Preparation of Final Contract Specifications

COMMENTS

APEC is an outgrowth of a computer applications conference held by Heating/Piping/Air Conditioning Magazine. The result was a cooperative effort of program development oriented toward engineering consultants' needs in the design of building systems. All of the programs are well documented, and the abstracts are easily followed.

1660-76

BIBLIOGRAPHIC INFORMATION

TITLE: CEPA Library - Program Title Listing

2. Bridge (32 subgroups)	85	8. Traffic and Transit (10 subgroups)	12
3. Buildings (43 subgroups)	97	9. Miscellaneous (12 subgroups)	48
4. Geotechnical (12 subgroups)	7		
5. Sanitary-Hydraulics (18 subgroups)	59		
6. Management Division (15 subgroups)	39		

COMMENTS

This compendium is a listing of the programs contributed by, and available to, the members of the Civil Engineering Program Applications group. Programs are described by name only within topical categories.

Abstracts of individual programs are for sale. The programs, however, are only available to CEPA members on a "point" system. Members receive "points" for contributing programs that are used by other members and "cash in" their points in order to obtain programs contributed by other members. Particfpation of U.S. Government agencies as members is encouraged.

COMMENTS

EG&G Washington Analytical Services Center, Inc. requested a number of companies, universities, and organizations to supply compendiums of engineering computer programs. The responses varied greatly in both size and subject area. Some were small, unbound listings, or descriptions of a few programs. These have been organized into one volume for easy reference.

COMMENTS

This publication is the proceedings of the second IFIP/IFAC/JSNA joint conference on Computer Applications in Shipping and Shipbuilding, held in Tokyo, Japan in August of 1973.

The primary emphasis of this conference was the automation of shipyard operation and ship design. Many of the papers are related to numerically controlled machine tools and automated material monitoring systems.

BIBLIOGRAPHIC INFORMATION

TITLE: An Inventory of Current Mathematical Models of Scientific Data-Gathering Moors (HCI-TR-4450-0001)

PERSONAL AUTHOR: Dillon, David B.

Pumping	1
Inventory Control	6
5. Refining/Petrochemical	
Process Design	3
Plant Design	16
Plant Operations,	24
Data Management System	1
Preventive Maintenance	1

COMMENTS

Program descriptions are brief and concise but contain enough information for most users to be able to determine if the program will meet their needs. Although the primary thrust of this compendium is toward petroleum industry applications, the programs are sufficiently general in scope to be applicable to a wide range of problems. Programs are only available for use on Boeing's computer.

Telephone Information Processing allows data to be transmitted by users from a Touch-Tone telephone with computer output transmitted as a voice response. The PETROEX System is a set of computer routines available to participants for exchanging petroleum product data.

NOTE: Included in 3-ring binder for protection.

b. Curve Fitting	7	5. Demonstration	
c. Simulation	1	a. Computer Games	16
d. Roots & Eigenvalues	6		
e. Optimization	1		
f. Plotting	3		

COMMENTS

This compendium describes the programs available to the users of the International Timesharing Corporation's Computer Services. It is a collection of specialized routines designed to solve many common types of calculation problems in the fields of business, mathematics, and engineering.

Twenty-one of the engineering programs are available from Environmental Services, Inc. through ITS.

NOTE: Included in 3-ring binder for protection.

1660-76

1. Statistics	37
2. General Mathematics	32
3. Finance	32
4. Games	13
5. Miscellaneous *	9
6. KRONOS Procedures	7

* Includes the following four engineering programs:

a. BEMDES - Steel beam design
b. GASVAL - Gas valve coefficients
c. LIQVAL - Liquid valve coefficients
d. STMVAL - Steam valve coefficients

COMMENTS

This compendium provides two-page descriptions of programs and subroutines available on the KRONOS computer service of Control Data Corporation. These are special-purpose programs suitable for the interactive solution of common problems. A few of the miscellaneous programs address engineering topics.

Two other compendiums describing engineering programs available from the CDC computer services are:

CYBERNET Program Library Catalog, and
Systems Professional Master User Information and Operational Instructions

COMMENTS

This compendium is a computer listing of the programs, abstracts, and keywords of the Boeing Computer Users Richland Library. It is a diverse assortment of programs directed toward the planning, management, design, construction and operation of nuclear power projects. From the cross-referenced keywords, a user can isolate potentially useful programs. The abstracts identify whether a particular program will meet his needs.

See also the BCS compendium given coverage earlier in section.

COMMENTS

The Systems Professional programs are made available exclusively from Control Data Corporation's time sharing service.

Although there are only 32 programs, they are sufficiently well-developed to make them useful for a number of related applications. The user's guides are very thorough and include examples. A number of the programs go beyond the standard analysis phases and into the realm of design and selection of materials in accordance with current specifications.

Two other compendiums describing engineering programs available from the CDC Computer Service are:

KRONUS Library Programs, and

* Packages of multiple, related programs

COMMENTS

This compendium is printed in three volumes for the Tymshare Computer service. Programs are described by a single phrase. Usually a reference is provided for obtaining further details. It is not apparent whether the volumes supersede each other in some order or are complementary. The engineering computer programs are dominated by electrical applications. Many of the programs are packages obtained by Tymshare from other sources.

f. General	28
g. Industrial	3
h. Marine	1
i. Mechanical	94
j. Other	35
4. Mining	1
5. Steel Fabrication	1

COMMENTS

This compendium provides a communication medium between buyers and sellers of computer program or data services. It contains listings of program products and data services that have been submitted for marketing.

Volume I lists systems software and services for data processing professionals; these are not applicable to the solution of ocean engineering problems.

Volume II describes application software and services for business applications. From this broad scope, only those topics relating to ocean science and engineering have been listed in the Subject Index.

The ICP directory is a major sourcebook for programs being marketed. An index to all programs being marketed by a given organization would be more useful than the simple list of contributors. Specifying the pages where subtopics of engineering programs begin would make the Table of Contents more useful.

1666-78

BIBLIOGRAPHIC INFORMATION

TITLE: MARCS Marine Structures Computer System, Information Manual, 3rd Edition

* OBTAIN FROM THIS SOURCE.

DESCRIPTIVE INFORMATION

TYPE OF COMPENDIUM: Advertising brochure for marine structures programs.

SCOPE: Proprietary programs developed and marketed by Synercom.

ARRANGEMENT: None

INDEXING DEVICES: Table of Contents

ABSTRACTS: Yes THEORY: Yes
ASSOCIATED SEARCH ASSISTANCE: No
UPDATE INTERVAL: None planned
NUMBER OF PROGRAMS: 3

ENTRY FORMAT: Descriptive Paragraph, Features, Input and Output, and Illustrations.

PRICE: No charge

SUBJECT INDEX

PROGRAM TOPIC

1. AUTOPLAT - preprocessor system for marine structures
2. SEALOAD - environmental model for marine structures
3. STRAN - structural analysis of marine structures

COMMENTS

MARCS marine structures model is a proprietary product of Synercom Technology, Inc. It is a compendium only in the loose sense that the overall model is divided into three subsystems which may be used as independent programs. It is included as a part of this index primarily because the MARCS programs have direct application to the design of fixed ocean facilities.

The AUTOPLAT subsystem is a preprocessor for describing a marine structure and related tasks. SEALOAD is used to describe and calculate environmental forces on the structure. STRAN calculates the stresses and deflections of the marine structure.

BIBLIOGRAPHIC INFORMATION

TITLE: MDX - Computer Program Descriptions

SUBJECT INDEX

STARDYNE Static Analysis

Structures to be analyzed are modeled as systems of nodes interconnected by beams and plates. Weight and inertia are distributed among the nodes; elasticity is modeled in the connecting elements. The deflections, loads, stresses, natural frequencies, and node shapes are computed for the structure.

DYNRE Dynamic Response

Solutions for the response of a system to transient shock or sinusoidal disturbance are calculated, including the effects of mass, damping, and stiffness, using STARDYNE.

SEADYNE

This program solves the 12-degree of freedom problem of two floating bodies elastically coupled in a seaway. Using hydrostatic, hydrodynamic, geometric, elastic, and wave characteristics, the motions and loads of the system are found.

HAVER

The response of a floating body to Neumann, Pierson-Moskowitz, or Bretscheider wave spectra plus swell is calculated.

SEASTAR

Heave motions of floating structures are calculated in the time domain using a nonlinear, lumped parameter analysis.

SEASTRESS

A lumped-mass model of a floating drilling rig.

SEADAM

The statistical properties of ocean waves are extracted from data.

COMMENTS

This is a technically oriented sales brochure for a set of commercially available ocean engineering computer programs. The capabilities of each program are described, along with a summary of the analytical technique and a sample problem. The programs are strongly oriented toward the design of offshore facilities.

BIBLIOGRAPHIC INFORMATION

TITLE: Presentation to Naval Facilities Engineering Command

PERSONAL AUTHOR: Lowery, Edwin L., Speaker
