20. ABSTRACT (Continue on reverse side if necessary and identify by block number) The gross paleomagnetic polarity sequence recorded in deep-sea sediments has now been clarified as far back in time as Late Oligocene using chronologically overlapping cores from the tropical Pacific. This research also provided the foundation for various authors to propose a Neogene paleomagnetic "time-scale". Although this scale is still evolving, at least in part it corresponds well with similar scales based on marine magnetic anomalies and radiometric dates from continental sections. (continued)

20. Abstract (continued) ^e A P 1473 B)

It is possible to directly calibrate planktonic microfossil datum plates against the magnetic sequence in the sediments, and hence, against the proposed time scale. [↑] Here we present a first attempt to compile a comprehensible catalogue of such calibrations for stratigraphically important Neogene radiolarian datum planes. In a few instances, due to inadequate representation of particular species in some cores, either the top (T) or bottom (B) of a range could not be determined.

SECURITY CLASSIFICATION OF THIS PAGE(When Data Entered)

R-datum plane is of greater stratigraphic reliability than a T-datum, and that the sequence of specific events obviously depends, to a degree, on the investigator's taxonomic concepts.

Table 1. Paleomagnetic and geochronologic calibration of Neogene radiolarian events observed in the piston cores studied by Theyer and Hammond (1974a, 1974b). The listing is from youngest to oldest; however, when two or more events are concurrent, alphabetical order was used.

Species	Events*	Paleomagnetic Calibration	Age (my)
PLIOCENE (-1.8 to -5 my)			
1 <i>Pterocanium prismatium</i>	T	early 1/3 of Matuyama	1.6
2 <i>Stichocorys peregrina</i>	T	latest Gauss	2.5
3 <i>Spongaster pentas</i>	T	latest Gilbert	3.4
4 <i>Ommatartus penultimus</i>	T	middle Gilbert	3.6
5 <i>Spongaster tetras</i>	B	middle Gilbert	3.6
6 <i>Ommatartus tetrathalamus</i>	B	middle Gilbert	3.8
7 <i>P. prismatium</i>	B	early 1/3 of Gilbert	4.4
8 <i>Solenosphaera omnituba</i>	T	early 1/4 of Gilbert	4.7
9 <i>S. pentas</i>	B	bottom of Gilbert	4.8
10 <i>Acrobotrys tritubus</i>	T	earliest Gilbert	4.9
LATE MIOCENE (-5 to -10.7 my)			
11 <i>Ommatartus antepenultimus</i>	T	middle of Epoch 5	5.5
12 <i>Stichocorys delmontensis</i>	T	latest Epoch 6	6.0
13 <i>Stichocorys peregrina</i>	B	early 1/4 of Epoch 6	6.3
14 <i>A. tritubus</i>	B	early 1/4 of Epoch 6	6.4
15 <i>S. omnituba</i>	B	early 1/4 of Epoch 6	6.4
16 <i>Ommatartus hughesi</i>	T	latest Epoch 9	8.8
17 <i>O. penultimus</i>	B	latest Epoch 9	8.8
18 <i>Cannartus laticonus</i>	T	early 1/3 of Epoch 9	9.5
19 <i>Cannartus petterssoni</i>	T	early 1/3 of Epoch 9	9.5
20 <i>O. antepenultimus</i>	B	latest Epoch 11	10.7
21 <i>O. hughesi</i>	B	latest Epoch 11	10.7
MIDDLE MIOCENE (-10.7 to -15 my)			
22 <i>Stichocorys wolffii</i>	T	top of Epoch 11	10.8
23 <i>Cyrtocapsella cornuta</i>	T	middle of Epoch 11	11.1
24 <i>Dorcadospyris alata</i>	T	middle of Epoch 11	11.1
25 <i>C. petterssoni</i>	B	early 1/3 of Epoch 11	11.2

	Species	Events*	Paleomagnetic Calibration	Age (my)
26	<i>Acrocubus octopylus</i>	T	earliest Epoch 11	11.4
27	<i>Cyrtocapsella tetrapera</i>	T	earliest Epoch 11	11.4
28	<i>Tympanidium binocionum</i>	T	earliest Epoch 11	11.4
29	<i>Giraffospyris toxaria</i>	T	latest Epoch 12	11.5
30	<i>Calocycletta costata</i>	T	top of Epoch 12	11.6
31	<i>Calocycletta virginis</i>	T	top of Epoch 12	11.6
32	<i>Cyclampterium leptetrum</i>	T	middle of Epoch 12	11.7
33	<i>Cannartus laticonus</i>	B	latest Epoch 15	13.4
34	<i>Lithopera neotera</i>	B	middle Epoch 15	14.1
35	<i>Cannartus violina</i>	T	early 1/3 Epoch 15	14.2

EARLY MIOCENE (-15 to -23.5 my)

36	<i>Dorcadospyris dentata</i>	T	top of Epoch 16	15.2
37	<i>Dorcadospyris forcipata</i>	T	top of Epoch 16	15.2
38	<i>D. alata</i>	B	middle of Epoch 16	15.5
