PREFACE

This report presents a summary of the results of a detailed Air Force Electronic Principles Survey of the Weapons Control Systems Specialty, AFSC 321X2.

The Electronic Principles Inventory (EPI) was developed by Major Thomas J. O'Connor and Mr. Hendrick W. Ruck and the survey data were analyzed by Captain Jerry M. Barucky. All are members of the Occupational Survey Branch, USAF Occupational Measurement Center, Lackland AFB, Texas.

Computer programs for analyzing the data were designed by Dr. Raymond E. Christal, Occupational and Manpower Research Division, Air Force Human Resources Laboratory (AFHRL), and were written by the Project Analysis and Programming Branch, Computational Sciences Division, AFHRL.

Distribution of this report is made upon request to the USAF Occupational Measurement Center, attention of the Chief, Occupational Survey Branch (OMY), Lackland AFB, Texas 78236.

This report has been reviewed and is approved.

ELECTRONIC PRINCIPLES OCCUPATIONAL SURVEY REPORT
WEAPONS CONTROL SYSTEMS CAREER LADDER
AFSC 321X2

INTRODUCTION

This report summarizes the results of the administration of the Electronic Principles Inventory to airmen assigned to Weapons Control Systems Specialty (AFSC 321X2). The data for this report were collected during the period April through June 1977.

This report describes: (1) development and administration of the survey instrument; and (2) electronic principles used by DAFSC 5-skill level personnel both CONUS and overseas and assigned to selected major commands.

DEVELOPMENT OF THE ELECTRONIC PRINCIPLES INVENTORY (EPI)

The EPI was developed by personnel from the Occupational Survey Branch who were well qualified in theoretical physics and electronics, as well as in task analysis and survey development. Over 300 maintenance personnel from SAC, TAC, ADC, MAC, and AFCS participated in the development of the inventory. Representing the five ATC training centers, electronics experts who averaged 12 years of maintenance experience and four years of electronic principles instruction experience spent several weeks refining the EPI. In addition, personnel at the Electrical Engineering Department of the USAF Academy and the Air Force Human Resources Laboratory were consulted during the development of the inventory.

The final version of the EPI used in this survey contained 1,257 items in 62 subject matter areas covering all electronic principles training given at the five ATC technical training centers. Table 1 lists the 62 subject areas.

ADMINISTRATION

The Electronic Principles Inventory was administered by mail to AFSC 32152 airmen worldwide. Responses from 224 individuals represented 13 percent of the total of all AFSC 32152 personnel. Table 2 shows the percentage distribution by major command of the survey incumbents.

PRESENTATON OF RESULTS

Personnel responded "yes" or "no" to the 1,257 electronic principles questions as related to their present job. A Group Summary (GPSUM) computer printout is provided in the Appendix portion of this report. Page 1 of each (4A, 4B, 4C) GPSUM lists eleven of the thirty-three selected groups identified for this report. Pages 2-44 in each GPSUM show the percentage of the incumbents responding to the EPI items. The computer program results display the percent members answering "yes" to the subject area questions. The reader can locate a specific subject area by referring to the Appendix page number as listed in Table 1. For example, the Transformers area results are given on pages 6-7 of each GPSUM. The percentage of survey respondents indicating use of specific electronic principles ranged from high in areas such as direct current and voltage (p.2) and multimeter uses (pp.3-4) to low in areas such as single sideband systems (pp.30-31) and Lasers (pp. 42-43). Additional AFSC 321X2 data can be obtained upon request to the Chief, Occupational Survey Branch (OMY).
