ACKNOWLEDGEMENT

This bibliography has relied heavily on the more comprehensive work (which does not impose any geographical limitations), compiled by Pauline A. Keehn, namely, Bibliography on Marine Atlases. Washington, D.C. January, 1968.

The Division of Fisheries and Oceanography of the C.S.I.R.O. provided the main source of location for many of the atlases cited.

INTRODUCTION

The increasing concern about the exploitation of Australia's contiguous oceans, either for military or civil uses has promoted the compilation of this bibliography of oceanographic atlases which contain information about waters around Australia.

The most comprehensive pair of atlases that by themselves give a good summary of data are:-

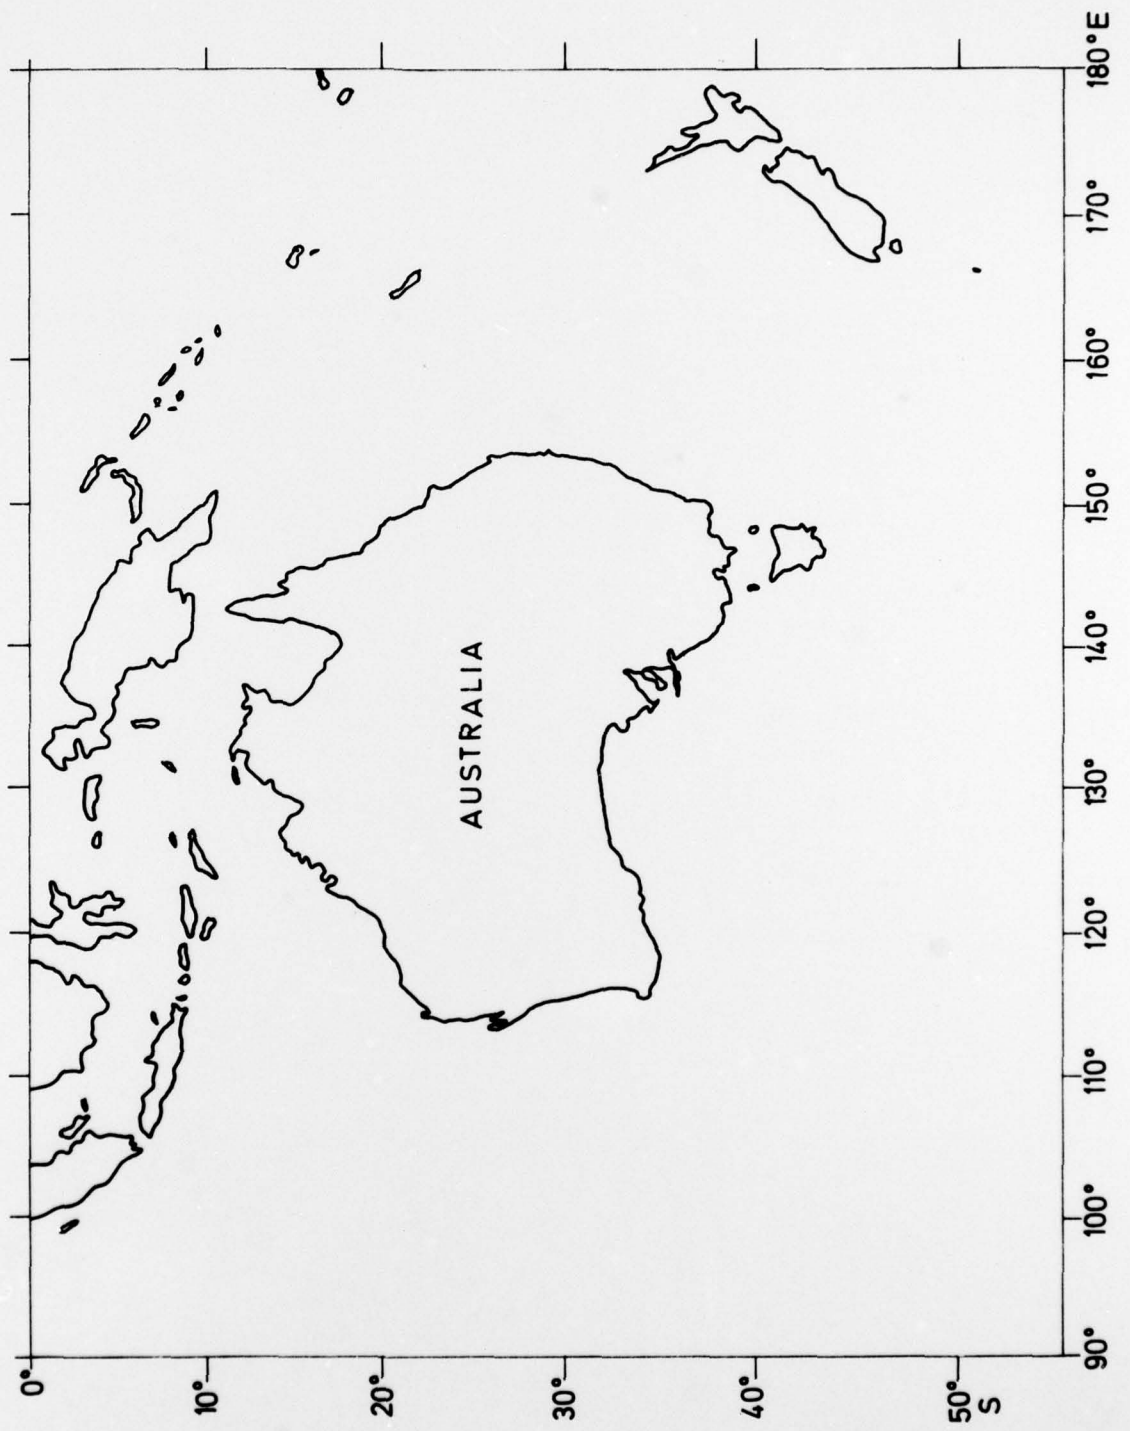

1. Oceanographic atlas of the International Indian Ocean Expedition, edited by Klaus Wyrski. Washington, National Science Foundation, 1971.
2. World Ocean Atlas, vol 1: Pacific Ocean, edited by S. G. Gonskov. Oxford, Pergamon, 1974.

This bibliography contains oceanographic and meteorological data relating to the Pacific and Indian Oceans, relating to the area  $0^{\circ}\text{S} - 50^{\circ}\text{S}$  and  $100^{\circ}\text{E} - 180^{\circ}\text{E}$  (c.f. page following for map of area covered.)

The material is arranged alphabetically in four sections: oceanographic atlases, maps, a list of encyclopaedia references and miscellaneous publications. Main entry under title in preference to editor has been given when the work is better known by the former.
